<b>1</b>	<b>The Two-Body Problem</b>	<b>1</b>
1.1	Position of the Problem	1
1.2	The Conic Sections and Their Geometrical Properties	12
1.3	The Elliptic Orbits	20
1.4	The Hyperbolic and Parabolic Trajectories	30
1.5	The Lambert Problem	37
1.6	Transfer Times for Elliptic, Parabolic, and Hyperbolic Trajectories	46
1.7	A Unified Form of Lambert's Equations	58
1.8	An Example of Solution of Lambert's Problem Using Universal Variables	65
1.9	The Classical Orbital Elements	75
1.10	Orbital Elements Defined for Any Orbit	89
1.11	The Lagrangian Coefficients $f$ , $g$ , $f'$ , and $g'$ in Closed Form	92
1.12	The Lagrangian Coefficients $f$ and $g$ in Time Series	101
1.13	Canonical Units	105
1.14	The $n$ -Body Problem	108
1.15	The Halo Orbits	122
	References	126
<b>2</b>	<b>Orbit Determination from Observations</b>	<b>129</b>
2.1	Position of the Problem	129
2.2	Topocentric Co-ordinate Systems	134
2.3	Orbit Determination from a Single Radar Observation	137
2.4	The Measurement of Time in Astronomy	149
2.5	Orbital Elements from Angle and Range Measurements	163
2.6	Orbital Elements from Three Measurements of Angles (Method of Gauss)	178
