1	Introduction	1
1.1	Some Remarks on Mathematical Models	3
1.2	Classification of Optimization Problems	3
1.3	Classification of Mathematical Models	5
	Reference	9
2	Logics	11
2.1	Elementary Notions	12
2.2	Solution of the Problems	15
	References	26
3	Some Fundamental Mathematical Models	27
3.1	Ordinary Differential Equations	27
3.1.1	Nonlinear Equations	27
3.2	Linear Nonstationary Equation	28
3.3	Stationary Linear Equations	31
3.4	Linear Difference Equations	31
3.4.1	Nonstationary Difference Equations	31
3.4.2	Stationary Linear Equations	32
3.5	Nonstationary Linear Differential Equations with Delay	33
3.6	Integral Equations	34
3.6.1	The Volterra Equation	34
3.6.2	The Fredholm Equation	35
3.6.3	Transfer Function and Frequency Response	37
3.7	Mathematical Description of Physical Processes (examples)	38
3.7.1	Chain Electrical Network and Transmission Line	38
3.7.2	Multiple Inverted Pendulum	41

3.8	Examples of Multidimensional Systems	46
3.8.1	The Kalecki Economic System	47
3.8.2	Thickness Control	49
3.8.3	Lunar Mission	50
3.9	Methods of Solving Stationary Ordinary Differential Equations	55
3.10	The Laplace Transform Method	55
3.11	Matrix Theory Methods	58
3.12	State Space Transformation Method	66
3.13	Transformations Leading to Diagonal Matrices.	78
3.13.1	The Case of Real Eigenvalues	78
3.13.2	The Case of Complex Eigenvalues	83
3.14	Transformations to the Jordan Canonical Form for Matrices Which Are Not Similar to Diagonal Matrices.	85
	References.	90
4	Fundamental Properties and Requirements of Control Systems . .	91
4.1	Asymptotic Stability of Linear Systems	94
4.2	Frequency Stability Criteria	96
4.3	The Mikhailov Criterion	102
4.4	The Nyquist Criterion.	104
4.5	The Euclidean Algorithm and Sturm Sequence	106
4.6	Number of Zeros of a Polynomial in a Complex Half-Plane.	110
4.7	The Routh Criterion	113
4.8	The Lyapunov Stability Criterion	122
4.9	Stability of Systems with Delays	129
4.10	Stability Criteria for Discrete Systems	138
4.11	The Kharitonov Criterion	142
4.12	Robust Stability Criterion	143
4.13	Controllability and Observability	149
4.14	Observability of Stationary Linear Systems	155
4.14.1	The Kalman Canonical Form.	163
4.15	Physical Realizability	165
4.16	The Paley–Wiener Criterion	168
4.17	The Bode Phase Formula	169
4.18	Performance Index of Linear Stationary Dynamical Systems.	171
4.19	Remarks and Conclusions.	176
	References.	182
5	Unconstrained Extrema of Functions.	185
5.1	Existence of Extremum Points	185
5.2	Extrema of Functions of One Variable	188
5.3	Extrema of Functions of Several Variables.	193

5.4	Definite, Semi-definite and Non-definite Quadratic Forms	198
5.5	Examples of the Use of Optimization in Approximation Problems.	202
5.5.1	Approximation in the space L^1	202
5.5.2	The L^2 Approximation with Exponential Sums	213
5.5.3	Ellipse Passing Trough Three Given Points and Having Minimum Area.	218
5.5.4	The Minimum Time Path	223
5.5.5	Ellipse Passing Trough Three Given Points and Having the Minimum Area.	224
5.5.6	Minimum Time Path	229
5.5.7	Timber Floating	231
	References.	234
6	Extrema Subject to Equality Constraints	237
6.1	Elimination Method	237
6.2	Bounded Variation Method.	242
6.3	Method of Lagrange Multipliers	244
6.3.1	Maximum Value of the Determinant	250
6.3.2	Hierarchical Static Systems	251
6.3.3	Synthesis of Optimal Static Hierarchical Systems . .	253
6.3.4	Optimal Distribution of the Resources Y Among n Components of the Same Type	257
	References.	272
7	Extrema Subject to Equality and Inequality Constraints.	275
7.1	Problem Formulation	275
7.2	Some Fundamental Notions of Set Theory	276
7.3	Conditions for the Existence of Optimal Solutions to Linear Problems.	278
7.3.1	Separation Theorem.	278
7.3.2	The Farkas Theorem	279
7.3.3	Application of the Farkas Theorem to a Linear Programming Problem.	280
7.4	Conditions for the Existence of Optimal Solutions to Nonlinear Problems	283
7.4.1	Supporting Plane	283
7.4.2	Separation of Sets	284
7.4.3	The Jordan Theorem	284
7.5	Extrema of Functions Subject to Inequality Constraints	285
7.6	Extrema of Functions Subject to the Equality and Inequality Constraints.	294
	References.	296

8	Parametric Optimization of Continuous Linear	
	Dynamic Systems.	297
8.1	SISO One-Dimensional Systems.	298
8.1.1	Integral Criteria from the Dynamic Error and Their Calculation	298
8.1.2	Calculation of Integral J_2 for Discrete Systems	318
8.2	Optimization of Multidimensional MIMO-Systems	324
8.3	Calculation of the Integral J_2 for Infinitely Dimensional Systems.	331
8.3.1	Differential Equations with Deviated Argument in the Time Domain t	331
8.3.2	Partial Differential Equations	332
8.3.3	Time-Domain Method	333
8.3.4	Calculation of the Integral of Squared Dynamic Error	334
8.3.5	Operator-Domain Method	341
8.3.6	Calculation of Integral of the Squared Error	341
8.3.7	Generalization of the Method for Many Different Odd Functions $q_i(s)$.	347
8.4	Finding the Time Extremum Which Corresponds to the Transient Error Extremum	349
8.5	The Shortest Transient Growth Time	352
8.6	The $\min_k \max_t x_e(t)$ Criterion as a Problem of Parametric Optimization of the Maximum Dynamic Error	357
8.7	Balancing a Stick on a Finger.	361
	References.	370
9	Elements of Variational Calculus.	373
9.1	The Brachistochrona Problem.	374
9.2	The Euler Equation, The Elementary Derivation.	376
9.3	The Lagrange Method. The Necessary Conditions	377
9.3.1	Definitions, Lemmas and Theorems.	377
9.3.2	The Lagrange Problem	381
9.3.3	Function Variation.	384
9.3.4	Necessary Condition for the Extremum.	385
9.3.5	The Euler-Lagrange Equation	385
9.3.6	The Legendre Necessary Condition	388
9.4	Elementary Derivation of the Jacobi Conditions	391
9.5	Generalizations	393
9.5.1	Functionals Defined on Vector Functions	393
9.5.2	Functionals Depending on Higher-Order Derivatives.	394
9.5.3	Functionals Defined on Functions of Several Variables	394
9.5.4	Variational Problems with Free End Points	400

9.5.5	Non-standard Functionals	403
9.5.6	The Legendre Transformation	405
9.6	The Hamilton Equations	408
9.6.1	Equivalence of the Euler–Lagrange and Hamilton Equations	408
9.7	Classic Variational Calculus and Optimal Control Theory	410
9.7.1	Hamilton’s Principle of Least Action	410
	References	414
