1	Introduction	1
1.1	Context of the Thesis	1
1.2	Motivations	1
1.3	Thesis Objectives	2
1.4	Outline of the Thesis	2
1.5	Notation	5
	References	5
 Part I Advances in Gain-Scheduling Techniques		
2	Background on Gain-Scheduling	9
2.1	Gain-Scheduling: LPV Systems and TS Systems	9
2.2	Modeling of LPV Systems	11
2.2.1	Jacobian Linearization	12
2.2.2	State Transformation	13
2.2.3	Function Substitution	14
2.2.4	Other Approaches and Current Directions of Research	15
2.3	Modeling of TS Systems	16
2.3.1	Sector Nonlinearity	17
2.3.2	Local Approximation in Fuzzy Partition Spaces	18
2.4	Analysis of LPV and TS Systems	19
2.4.1	Analysis Based on a Common Quadratic Lyapunov Function	22
2.4.2	Analysis Based on Other Lyapunov Functions	33

2.5	Control of LPV and TS Systems	35
2.6	Conclusions	43
	References	44
3	Automated Generation and Comparison of Takagi-Sugeno and Polytopic Quasi-LPV Models	51
3.1	Introduction	51
3.2	Analogies Between Polytopic LPV and TS Systems	52
3.3	Measures for Comparison Between LPV and TS Models	53
3.3.1	Overboundedness-Based Measure	53
3.3.2	Region of Attraction Estimates-Based Measure	54
3.4	Generation of TS Models via Nonlinear Embedding	55
3.5	Generation of Polytopic LPV Models via Sector Nonlinearity	58
3.6	Application Example	61
3.6.1	Generation of TS Models via Nonlinear Embedding	61
3.6.2	Generation of Polytopic LPV Models via Sector Nonlinearity	66
3.6.3	Comparison	70
3.7	Conclusions	72
	References	73
4	Robust State-Feedback Control of Uncertain LPV Systems	75
4.1	Introduction	75
4.2	Problem Formulation	76
4.3	Design Using a Common Quadratic Lyapunov Function	78
4.4	Design Using a Parameter-Dependent Lyapunov Function	84
4.5	Examples	90
4.5.1	Example 1: \mathcal{D} -stability	90
4.5.2	Example 2: \mathcal{H}_∞ Performance	94
4.6	Conclusions	97
	References	98
5	Shifting State-Feedback Control of LPV Systems	101
5.1	Introduction	101
5.2	Problem Formulation	102
5.3	Design Using a Common Quadratic Lyapunov Function	105
5.4	Examples	114
5.4.1	Example 1: Shifting \mathcal{D} -Stability	114
5.4.2	Example 2: Shifting \mathcal{H}_∞ Performance	120
5.5	Conclusions	124
	References	125

Part II Advances in Fault Tolerant Control Techniques

6	Background on Fault Tolerant Control	129
6.1	Motivation	129
6.2	Hardware Redundancy Techniques	130
6.3	Passive Fault Tolerant Control Techniques	130
6.3.1	Reliable Linear Quadratic (LQ) Approach	131
6.3.2	\mathcal{H}_∞ Robust Control	131
6.3.3	Passive FTC Using Linear Matrix Inequalities (LMIs)	132
6.4	Active Fault Tolerant Control Techniques	132
6.4.1	Linear Quadratic (LQ) Approach	133
6.4.2	Pseudo-inverse Method (PIM)	133
6.4.3	Intelligent Control (IC)	134
6.4.4	Gain-Scheduling (GS)	134
6.4.5	Model Following (MF)	135
6.4.6	Adaptive Control (AC)	135
6.4.7	Multiple Model (MM)	135
6.4.8	Integrated Diagnostics and Control (IDC)	136
6.4.9	Eigenstructure Assignment (EA)	136
6.4.10	Feedback Linearization (FL)/Dynamic Inversion (DI)	137
6.4.11	Model Predictive Control (MPC)	137
6.4.12	Quantitative Feedback Theory (QFT)	137
6.4.13	Variable Structure Control (VSC)/Sliding Mode Control (SMC)	138
6.5	Recent Developments of Fault Tolerant Control	138
6.6	Conclusions	140
	References	141
7	Fault Tolerant Control of LPV Systems Using Robust State-Feedback Control	147
7.1	Introduction	147
7.2	Problem Formulation	148
7.3	Fault Tolerant Control	149
7.3.1	Passive FTC Reference Model	149
7.3.2	Active FTC Reference Model	149
7.3.3	Passive FTC Error Model	150
7.3.4	Active FTC Error Model	151
7.3.5	Hybrid FTC Error Model	151
7.4	Reconfigurable Controller Strategy	153
7.4.1	Passive FTC	153
7.4.2	Active FTC Without Controller Reconfiguration	153
7.4.3	Reconfigured FTC with Fault Detection	154
7.4.4	Reconfigured FTC with FDI	154

7.4.5	Reconfigured FTC with Fault Detection, Isolation and Estimation	155
7.5	Application to a Quadrotor System	155
7.5.1	Quadrotor Modeling	155
7.5.2	Reference Inputs Calculation for Trajectory Tracking	161
7.5.3	Results	164
7.6	Conclusions	173
	References	174
8	Fault Tolerant Control of LPV Systems Using Reconfigured Reference Model and Virtual Actuators	175
8.1	Introduction	175
8.2	FTC Using Reconfigured Reference Model and Virtual Actuators	176
8.2.1	Model Reference Control	176
8.2.2	Fault Definition	177
8.2.3	Fault Tolerant Control Strategy	178
8.2.4	Graceful Performance Degradation in Presence of Actuator Saturations	181
8.2.5	Effects of the Fault Estimation Errors	183
8.3	Design Using LMIs	185
8.3.1	Properties of Block-Triangular LPV Systems	185
8.3.2	Overall FTC Scheme Design	188
8.4	Application Examples	189
8.4.1	Application to a Twin Rotor MIMO System	189
8.4.2	Application to a Four Wheeled Omnidirectional Mobile Robot	201
8.5	Conclusions	212
	References	212
9	Fault Tolerant Control of Unstable LPV Systems Subject to Actuator Saturations and Fault Isolation Delay	215
9.1	Introduction	215
9.2	Preliminaries	217
9.3	Problem Statement	221
9.4	Design of Non-saturating Stabilizing LPV Virtual Actuators	223
9.5	Robustness of the Controller Against Fault Isolation Delays	229
9.6	Example	232
9.7	Conclusions	239
	References	239

10 Conclusions and Future Work 241

 10.1 Conclusions 241

 10.2 Perspectives and Future Work 244

**Appendix A: Dilated LMIs for the Finite Time Boundedness
 and Stability Analysis of Discrete-Time Systems** 247

**Appendix B: Proof of the Independence of the Matrix $B^*(\theta(\tau))$
 from $f(\tau)$** 251

Advances in Gain-Scheduling and Fault Tolerant Control
Techniques
