Preface	vii
List of Figures	xiii
List of Tables	xvii
List of Exercises	xix
Chapter 1. Introduction	1
1.1. Perception as Reality	3
1.2. Classical Physics	11
1.3. Quantum Physics	17
1.4. Mathematical Insights	22
Chapter 2. On the Nature of the Photon	29
2.1. Maxwell's Equations	30
2.2. Fields and Potentials	38
2.3. Point sources	44
2.4. Relativistic Formulation	48
2.5. Solitons	56
Chapter 3. On the Nature of the Electron	63
3.1. Dirac Equation	65
3.2. Gauge Theory	71
3.3. Gyromagnetic Ratio	77
3.4. Mathematical Difficulties	83
Chapter 4. On Atoms	87
4.1. Hydrogen	88
4.2. Many-body Problems	96
4.3. Density-Functional Theory	102
4.4. Heavy Atoms	108
Chapter 5. On the Nature of the Nucleus	111
5.1. Electron Scattering	111
5.2. Nuclear Size	116
5.3. Nuclear Structure	120
5.4. Four Forces	129
Chapter 6. Toward a Theory of Everything	135
6.1. Quarks	136

6.2. Electroweak Unification	143
6.3. Standard Model	149
6.4. Strings	155
Chapter 7. On the Nature of the Chemical Bond	163
7.1. Electronic Structure	165
7.2. Emergent Behavior	176
7.3. Hydrogen Bonding	182
7.4. Chemistry	186
Chapter 8. On Solids	191
8.1. Bulk Properties	195
8.2. Surface States	205
8.3. Nanoscale Materials	211
8.4. Superconductivity	218
Chapter 9. Light and Matter	225
9.1. Geometric Optics	225
9.2. Transformation Optics	234
9.3. Quantum Optics	243
9.4. Quantum Computing	248
Chapter 10. Biological Systems	253
10.1. Diffusion	253
10.2. Molecular Structure and Recognition	264
10.3. Biomolecular Machines	274
10.4. Molecular Toolkit	277
Chapter 11. On Plasmas	285
11.1. Fourth State of Matter	287
11.2. Magnetohydrodynamics	290
11.3. Astrophysical Plasmas	296
11.4. Fusion	300
Chapter 12. On Stars	307
12.1. Nuclear Fusion Cycles	308
12.2. Stellar Evolution	312
12.3. Black Holes	317
12.4. Open Issues	329
Appendix A. Mathematical Bits	341
Index	349

List of Figures

1.1	Particle in field.	4
1.2	Superfluid ^3He , courtesy of APS	5
1.3	Cone cell sensitivity	7
1.4	CIERGB color match	8
1.5	Neon spectrum	11
1.6	Lifetimes	12
1.7	Sand dunes, courtesy of NASA	13
1.8	Reflection and refraction	15
1.9	Fresnel diffraction	16
1.10	Two-slit diffraction	18
1.11	Single photon diffraction, courtesy of Dept. Physics, Princeton	19
1.12	Electron diffraction, courtesy of AIP	21
1.13	Rotating frame of reference	24
2.1	Surface and volume integrals	31
2.2	Oriented surface	33
2.3	Hertz experiment	37
2.4	RLC circuit	37
2.5	Plane wave propagation	41
2.6	Geometry	44
2.7	Synchrotron radiation	47
2.8	Bremsstrahlung	48
2.9	Focus wave mode	58
2.10	Soliton interactions.	61
3.1	Ionization energies.	64
3.2	Feynman diagram	76
3.3	Penning trap	78
3.4	Geonium energy levels	80
3.5	Anomalous g-factor	80
3.6	Hydrogen spectrum	81
3.7	Lamb shift	82
3.8	Higher-order Feynman diagrams	85
4.1	Periodic table	97
4.2	Helium energy levels	100
4.3	DFT accuracy	106
4.4	Tungsten x-ray source spectrum	108
4.5	K-shell x-ray energies	109
4.6	Relativistic corrections	110

5.1	Electron scattering Feynman diagram	112
5.2	Form factors.	114
5.3	Electron scattering.	115
5.4	Electron scattering from carbon.	117
5.5	Nuclear charge distributions.	119
5.6	Electron diffraction.	119
5.7	Co neutron separation energies.	120
5.8	Nuclear shell model	122
5.9	Energy levels in ^{158}Gd	127
5.10	α and β discovery	130
5.11	^{210}Bi β decay	131
5.12	^{64}Cu decay.	132
6.1	Deep inelastic scattering.	136
6.2	Quark meson states	140
6.3	Quark baryon states	141
6.4	Strange interactions	144
6.5	Neutron decay	148
6.6	ATLAS detector, courtesy of CERN	150
6.7	ATLAS event	151
6.8	Asymptotic freedom	153
7.1	Molecular spectrometer	164
7.2	Buckminsterfullerene	164
7.3	CO_2 charge density	170
7.4	Z-matrix	174
7.5	CO_2 scan	175
7.6	Carbon-carbon bonding	177
7.7	Bond rotational energy.	178
7.8	Vibrational spectra	179
7.9	Water duplex	183
7.10	Hydrogen bonding	184
7.11	Hydronium interaction	184
7.12	Proton transfer	185
7.13	FTS geometry	188
7.14	ICN disassociation	189
7.15	ICN dissociation energetics	189
8.1	Bravais lattice	192
8.2	Rotational symmetry	193
8.3	Quasicrystal, courtesy of Dan Shechtman.	194
8.4	Icosahedral quasicrystal, courtesy of Paul C. Canfield	195
8.5	FCC Brillouin zone	197

8.6	Diamond valence electron density	200
8.7	Diamond density of states	202
8.8	Diamond band structure	203
8.9	Nickel/Silicon density of states	203
8.10	Carbon cluster	206
8.11	Cluster distances.	206
8.12	Nickel (110) surface, courtesy of IBM	208
8.13	Scanning probe tip	209
8.14	Atomic force microscope	210
8.15	Carbon nanotubes	212
8.16	Car-Parrinello boron simulation	216
8.17	Mercury superconducting transition	219
8.18	Perovskite structure	222
8.19	Superconductivity history	224
9.1	Gaussian pillbox	226
9.2	Faraday loop	227
9.3	Snell's law geometry	228
9.4	TE reflection and refraction	230
9.5	TM Fresnel coefficients	231
9.6	Curved interface	233
9.7	Caustic surface	234
9.8	Left-handed materials	235
9.9	Split ring resonator	236
9.10	Parallel transport	237
9.11	Radial transform	240
9.12	Conformal mapping	240
9.13	Electromagnetic cloak, courtesy of David R. Smith	242
9.14	Frequency comb	245
9.15	Quadrupole magnetic field	247
9.16	Bose-Einstein condensate	248
10.1	Molecular mechanics	255
10.2	Methanol diffusion	259
10.3	Water molecule coordination	261
10.4	Radial distribution function	263
10.5	Hydrophobicity	263
10.6	Peptide bond	266
10.7	TEM-1 β -lactamase	267
10.8	tRNA synthetase	273
10.9	ATP synthase cryo-em image, courtesy of John L. Rubinstein	275
10.10	F_1 motor	276
10.11	F_1 motor	276

10.12	Momentum transfer	278
10.13	Optical tweezers	279
10.14	Dichroic long pass material	279
10.15	Microtubules, courtesy of Eva Nogales	280
10.16	Tubulin $\alpha\beta$ proteins	281
10.17	Tubulin/kinesin interaction	282
10.18	Kinesin translation	283
11.1	Van Allen radiation	286
11.2	Van Allen belts, courtesy of NASA	286
11.3	International Reference Ionosphere	288
11.4	Saturn's northern aurora, courtesy of NASA/JPL/U. Arizona	290
11.5	Jameson experiment	295
11.6	Alfvén waves	296
11.7	Solar corona from Stereo A spacecraft, courtesy of NASA	296
11.8	Solar power spectral density	297
11.9	Solar surface in the UV, courtesy of NASA	299
11.10	Plasma kink instability	302
11.11	Plasma sausage instability	303
11.12	Plasma kinks in 1946	303
11.13	ITER main magnets	304
11.14	ITER plasma density profile, courtesy of IAEA	305
12.1	^{14}N production	311
12.2	Elemental abundance	311
12.3	Hertzsprung-Russell diagram, courtesy of ESA	313
12.4	Stellar evolution	314
12.5	Lane-Emden functions	316
12.6	Parallel transport	319
12.7	Central parsec, courtesy of Andrea Ghez	324
12.8	Cygnus X-1 x-ray flux	326
12.9	LIGO experiment	327
12.10	Hanford gravitational wave, courtesy of LIGO	328
12.11	Galactic light curve	332
12.12	Galactic density	336
12.13	NGC-1309, courtesy of ESA/NASA	337
12.14	NGC1309 density	338
12.15	SN1a data	340
A.1	Contour integral	343
A.2	Branch cut	344

List of Tables

5.1	Nuclear charge distributions.	118
6.1	Quark quantum numbers. All quarks have half-integral spin.	139
6.2	Meson properties	145
6.3	Fundamental particles	154
8.1	Crystal lattice types	192
10.1	Genetic code	272
