

Contents

1	Introduction	1
2	Polyhedra	7
2.1	Basic Definitions.	7
2.2	Convex Hulls of Infinitely Many Points	11
2.3	The Slack Matrix	12
2.4	Projections of Polyhedra.	13
2.5	Union of Polyhedra Defined by Inequalities	24
2.6	Union of Polyhedra Defined by Vertices and Extreme Rays.	28
3	Linear Programming	33
3.1	Basic Definitions.	33
3.2	Polyhedral Characterization	35
3.3	Duality	36
3.4	Algorithms	39
4	Integer Linear Programming	43
4.1	Basic Definitions.	43
4.2	Modeling	45
4.3	Formulations with Integral LP-Relaxation.	48
4.4	The Branch-and-Bound Approach.	51
4.5	The Cutting-Plane Approach.	58
4.6	General-Purpose MILP Solvers.	65
5	Large-Scale Linear Programming	67
5.1	LP with Exponentially Many Columns.	68
5.2	Column Generation and Branch-and-Bound	70
5.3	LP with Exponentially Many Rows	71
5.4	LP with Exponentially Many Columns and Rows	72

6	General Techniques for Compact Formulations	75
6.1	Primal Compact Extended Formulations	75
6.2	Two Examples of Compact Extended Formulations	78
6.3	Compact Equivalent Formulations	81
6.4	A First Example of Compact Equivalent Formulation	84
6.5	A Second Example of Compact Equivalent Formulation	86
6.6	A Common Feature for Path Problems	90
6.7	The Dantzig–Wolfe Decomposition Technique	92
6.8	Projections and Slack Matrix Factorization	94
6.9	Union of Polyhedra	99
7	The Permutohedron	103
7.1	Basic Definitions	103
7.2	A Compact Extended Formulation by LP Techniques	106
7.3	A Direct Compact Extended Formulation	108
7.4	A Minimal Compact Extended Formulation	109
8	The Parity Polytope	113
8.1	External Representation of the Parity Polytope	114
8.2	A Compact Extended Formulation by Union of Polyhedra	117
8.3	A Compact Extended Formulation by LP Techniques	118
9	Trees	123
9.1	Steiner and Spanning Trees	123
9.2	Spanning Trees	125
9.3	Bounded-Degree Spanning Trees	131
9.4	Minimum Routing Cost Trees	133
10	Cuts and Induced Bipartite Subgraphs	137
10.1	Basic Definitions	137
10.2	Max-Cut and Edge-Induced Bipartite Subgraphs	138
10.3	Compact Versions	141
10.4	Model Comparison	144
10.5	Node-Induced Bipartite Subgraphs	146
11	Stable Sets	149
11.1	Basic Definitions	149
11.2	Compact Models	150
11.3	Comparability Graphs	152
12	Traveling Salesman Problems	155
12.1	Separation of Subtour Inequalities	156
12.2	A Column Generation Model for the ATSP	157
12.3	ATSP - A Compact Reformulation	160
12.4	Time-Window ATSP	161

13	Packing	165
13.1	Bin Packing	165
13.2	Robust Knapsack	169
13.3	Cycle Packing	170
14	Scheduling	173
14.1	The Job-Shop Problem	173
14.2	The One Machine Problem	178
15	Computational Biology Problems	183
15.1	Introduction	183
15.2	Sorting by Reversals and Alternating Cycles	184
15.3	Alignments and Longest Common Subsequences	190
15.4	Protein Fold Comparison	193
	References	197
	Index	205

Compact Extended Linear Programming Models

Lancia, G.; Serafini, P.

2018, IX, 208 p. 37 illus., Hardcover

ISBN: 978-3-319-63975-8
