

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Global Stabilization	1
1.2	Semi-global Stabilization	2
1.3	Regional Stability and Stabilization	3
1.3.1	The Null Controllable Region	3
1.3.2	Invariant Sets	4
1.4	Finite-Gain $\mathcal{L}_2$ Stability and $\mathcal{L}_2$ Gain	6
1.5	Anti-windup Compensation	6
1.6	Notation, Acronyms, and Terminology	8
<b>2</b>	<b>Convex Hull Representations</b>	11
2.1	Introduction	11
2.2	Single and Multiple Auxiliary Matrices	18
2.2.1	Single-Layer Saturated Linear Feedbacks	18
2.2.2	Nestedly Saturated Linear Feedbacks	25
2.2.3	Piecewise Linear Functions with Multiple Bends	36
2.3	Optimization Problems	40
2.3.1	Single-Layer Saturated Linear Feedback	40
2.3.2	Nestedly Saturated Linear Feedback	47
2.3.3	Piecewise Linear Functions	51
2.4	Discrete-Time Systems	52
2.5	Numerical Examples	54
2.6	Conclusions	60
2.7	Notes and References	61
<b>3</b>	<b>The Maximal Contractively Invariant Ellipsoids</b>	63
3.1	Introduction	63
3.1.1	Single Input Systems	64
3.1.2	Multiple Input Systems	67

3.2	Algebraic Computational Approach: Continuous-Time Systems.....	72
3.2.1	Algebraic Computation in $\Omega_i^o$ 's .....	73
3.2.2	Algebraic Computation in the Intersections Between $\Omega_i$ 's ...	79
3.2.3	An Algorithm .....	82
3.3	Algebraic Computational Approach: Discrete-Time Systems .....	83
3.3.1	Algebraic Computation in $\Omega_i^o$ 's .....	84
3.3.2	Algebraic Computation in the Intersections Between $\Omega_i$ 's ...	88
3.3.3	An Algorithm .....	95
3.4	LMI-Based Criterions.....	96
3.5	Numerical Examples .....	101
3.6	Conclusions .....	107
3.7	Notes and References .....	109
<b>4</b>	<b>Composite Quadratic Lyapunov Functions .....</b>	<b>111</b>
4.1	Introduction .....	111
4.2	The Convex Hull Lyapunov Function .....	112
4.2.1	Properties of the Convex Hull Lyapunov Function.....	112
4.2.2	Discrete-Time Systems .....	115
4.2.3	Continuous-Time Systems .....	123
4.2.4	Optimization Problems .....	126
4.2.5	Numerical Examples.....	128
4.3	The Max Quadratic Lyapunov Function .....	133
4.3.1	Discrete-Time Systems .....	133
4.3.2	Continuous-Time Systems .....	136
4.3.3	Optimization Problems .....	140
4.3.4	Numerical Examples.....	142
4.4	Nestedly Saturated Linear Feedback .....	143
4.4.1	Set Invariance Conditions .....	147
4.4.2	Optimization Problems .....	153
4.5	Conclusions .....	155
4.6	Notes and References .....	155
<b>5</b>	<b>Disturbance Tolerance and Rejection.....</b>	<b>157</b>
5.1	Introduction .....	157
5.2	Bounded State Stability .....	158
5.2.1	Single-Layer Saturation .....	158
5.2.2	Nested Saturations .....	164
5.2.3	Algebraic Loops with Saturations.....	169
5.3	Disturbance Tolerance .....	174
5.3.1	$\mathcal{L}_2$ Disturbances .....	174
5.3.2	$\mathcal{L}_\infty$ Disturbances .....	178
5.4	Disturbance Rejection .....	179
5.4.1	$\mathcal{L}_2$ Disturbances .....	179
5.4.2	$\mathcal{L}_\infty$ Disturbances .....	185

5.5	Numerical Examples .....	188
5.6	Conclusions .....	195
5.7	Notes and References .....	198
<b>6</b>	<b>Partitioning of the Convex Hull .....</b>	<b>199</b>
6.1	Introduction .....	199
6.2	Partitioning of the Convex Hull .....	200
6.2.1	Structural Conservatism of the Convex Hull .....	200
6.2.2	Partitioning of the Convex Hull .....	202
6.3	Design of the Switching Anti-windup Compensators .....	205
6.3.1	System Description .....	205
6.3.2	Problem Statement .....	207
6.3.3	Enlargement of the Domain of Attraction .....	209
6.3.4	The Nonlinear $\mathcal{L}_2$ Gain .....	214
6.3.5	Implementation of the Switching Anti-windup Compensator .....	218
6.3.6	A Numerical Example .....	219
6.4	Nestedly Saturated Linear Feedback .....	224
6.4.1	Partitioning of the Convex Hull .....	224
6.4.2	Problem Formulation .....	227
6.4.3	Design of Saturation-Dependent Switching Anti-windup Compensator .....	229
6.4.4	A Numerical Example .....	234
6.5	Conclusions .....	237
6.6	Notes and References .....	238
<b>7</b>	<b>Control Systems with an Algebraic Loop .....</b>	<b>239</b>
7.1	Introduction .....	239
7.2	Input Space Partitioning and Lyapunov Functions .....	240
7.2.1	Partitioning of the Input Space .....	240
7.2.2	Piecewise Quadratic Lyapunov Functions .....	241
7.3	Stability and Performance .....	242
7.3.1	Preliminaries .....	243
7.3.2	Estimation of the Domain of Attraction .....	245
7.3.3	Estimation of the Nonlinear $\mathcal{L}_2$ Gain .....	250
7.3.4	Numerical Optimization .....	254
7.3.5	Numerical Examples .....	255
7.4	Switching Anti-windup Design .....	261
7.4.1	Enlargement of the Domain of Attraction .....	261
7.4.2	Design of the Deadzone-Dependent Switching Anti-windup .....	266
7.4.3	Switching Anti-windup Design for Performance .....	274
7.4.4	A Numerical Example .....	281
7.5	Conclusions .....	285
7.6	Notes and References .....	285

<b>8</b>	<b>Generalized Piecewise Quadratic Lyapunov Functions</b>	287
8.1	Introduction	287
8.2	Generalized Piecewise Quadratic Lyapunov Functions	288
8.3	Linear Systems with Saturation Nonlinearities	290
8.3.1	Single-Layer Saturation	290
8.3.2	Nested Saturations	294
8.3.3	Piecewise Linear Functions	300
8.3.4	Optimization Problems	306
8.3.5	Numerical Examples	307
8.4	Systems with Saturation and an Algebraic Loop	318
8.4.1	Estimation of the Domain of Attraction	318
8.4.2	Estimation of the Performance	322
8.4.3	Optimization Problems	326
8.4.4	Numerical Examples	327
8.5	Conclusions	333
8.6	Notes and References	334
<b>9</b>	<b>Linear Systems with Asymmetric Saturation</b>	335
9.1	Introduction	335
9.2	Linear Systems with Asymmetric Saturation	336
9.3	Asymmetric Lyapunov Functions	342
9.3.1	Asymmetric Piecewise Quadratic Lyapunov Functions	343
9.3.2	Generalized Asymmetric Lyapunov Functions	347
9.3.3	Optimization Problems	348
9.4	A Numerical Example	350
9.5	Conclusions	355
9.6	Notes and References	355
	<b>Bibliography</b>	357
	<b>Index</b>	363

Stability and Performance of Control Systems with  
Actuator Saturation

Li, Y.; Lin, Z.

2018, XIV, 365 p. 89 illus., 86 illus. in color., Hardcover

ISBN: 978-3-319-64244-4

A product of Birkhäuser Basel
