

Contents

1	Introduction	1
1.1	Control Engineering and Finance	1
1.2	Outline	3
2	Modeling and Identification	7
2.1	Introduction	7
2.2	What Is a Model?	8
2.3	Modeling Process	17
2.3.1	Stock Prices	19
2.3.2	Lessons Learned	22
2.4	Parameter Identification	23
2.5	Mathematics of Parameter Identification	24
2.5.1	Basics of Extremes	25
2.5.2	Optimization with Constraints	28
2.6	Numerical Methods for Parameter Identification	31
2.6.1	Golden Section	32
2.6.2	Successive Parameter Optimization	32
2.7	Model Validation	34
2.8	Summary	34
2.9	Exercises	36
3	Probability and Stochastic Processes	39
3.1	Introduction	39
3.2	History and Kolmogorov's Axioms	40
3.3	Random Variables and Probability Distributions	41
3.3.1	Random Variables	41
3.3.2	Probability Distribution of a Discrete Random Variable	43
3.3.3	Binomial Distribution	43
3.3.4	Distribution Functions	45

3.3.5	Multidimensional Distribution Functions and Independence	47
3.3.6	Expected Value and Further Moments.	47
3.3.7	Correlation.	51
3.3.8	Normal Distribution.	53
3.3.9	Central Limit Theorem	53
3.3.10	Log-Normal Distribution	57
3.4	Stochastic Processes	58
3.5	Mathematical Description of Stochastic Processes with Distribution Functions	60
3.6	Stationary and Ergodic Processes	65
3.7	Spectral Density	67
3.8	Some Special Processes	68
3.8.1	Normal (Gaussian) Process	68
3.8.2	Markov Process.	69
3.8.3	Process with Independent Increments	72
3.8.4	Wiener Process	73
3.8.5	Gaussian White Noise	74
3.9	Analysis of Stochastic Processes.	74
3.9.1	Convergence	74
3.9.2	Continuity	75
3.9.3	Differentiability	75
3.9.4	Integrability	75
3.9.5	Brief Summary	76
3.10	Exercises.	76
4	Optimal Control	83
4.1	Introduction	83
4.2	Calculus of Variations	85
4.2.1	Subject Matter.	85
4.2.2	Fixed Endpoint Problem	86
4.2.3	Variable Endpoint Problem	88
4.2.4	Variation Problem with Constraints.	90
4.3	Optimal Dynamic Systems	91
4.3.1	Fixed Endpoint Problem	91
4.3.2	Variable Endpoint Problem	95
4.3.3	Generalized Objective Function.	97
4.4	Optimization with Limited Control Variables	97
4.5	Optimal Closed-Loop Control.	101
4.6	A Simple Cash Balance Problem	105
4.7	Optimal Control of Linear Systems	108
4.7.1	Riccati Equation	108
4.7.2	Optimal Control When Not All States Are Measurable.	112

4.8	Dynamic Programming	113
4.9	Discrete Time Systems	117
4.9.1	Remembering the Basics	117
4.9.2	Time Optimization.	120
4.9.3	Optimization with a Quadratic Objective Function	123
4.10	Differential Games	126
4.10.1	Introduction	126
4.10.2	Static Games	127
4.10.3	Zero-Sum Games.	130
4.10.4	The Co-Co Solution	131
4.10.5	Dynamic Games	132
4.11	Exercises.	134
5	Stochastic Analysis	139
5.1	Introduction	139
5.2	White Noise	139
5.3	Stochastic Differential Equations	141
5.4	Stochastic Integration	142
5.5	Properties of Itô Integrals	149
5.6	Itô Calculus	150
5.7	Solving Stochastic Differential Equations	156
5.7.1	Linear Scalar SDE's	157
5.7.2	Vector-Valued Linear SDE's.	162
5.7.3	Non-linear SDE's and Pricing Models.	165
5.8	Partial Differential Equations and SDE's	166
5.9	Solutions of Stochastic Differential Equations	168
5.9.1	Analytical Solutions of SDE's.	168
5.9.2	Numerical Solution of SDE's	170
5.9.3	Solutions of SDE's as Diffusion Processes	172
5.10	Exercises.	176
6	Financial Markets and Instruments	181
6.1	Introduction	181
6.2	Time Value of Money	181
6.3	Financial Investment Instruments	185
6.3.1	Fixed Income Investments.	185
6.3.2	Common Stocks	186
6.3.3	Funds	187
6.3.4	Commodities	189
6.3.5	Forex.	189
6.3.6	Derivative/Structured Products.	190
6.3.7	Real Estate	191
6.3.8	Other Instruments	191
6.4	Return and Risk	191

6.5	Utility	193
6.6	Utility Functions	195
6.7	Role of the Banks in Capitalist Economies	197
6.8	Exercises	198
7	Bonds	201
7.1	Introduction	201
7.2	Bond Parameters	202
7.3	Types of Bonds	203
7.4	Bond Returns	204
7.5	Bond Valuation	205
7.6	Fundamental Determinants of Interest Rates and Bond Yields	207
7.7	Rating Agencies	209
7.8	The Yield Curve	209
7.9	Duration	211
7.10	Exercises	213
8	Portfolio Management	215
8.1	Introduction	215
8.2	Measuring Risk and Return of Investments	215
8.3	Modern Portfolio Theory	216
8.3.1	Measuring Expected Return and Risk for a Portfolio of Assets	218
8.3.2	Efficient Frontier	220
8.4	Portfolio Optimization as a Mathematical Problem	221
8.5	Portfolio Optimization as a Practical Problem	225
8.6	Empirical Examples of Portfolio Optimization Using Historical Data	228
8.7	Bond Portfolios	233
8.8	Exercises	239
9	Derivatives and Structured Financial Instruments	241
9.1	Introduction	241
9.2	Forward Contracts	242
9.3	Futures	245
9.4	Options	248
9.4.1	Basics	248
9.4.2	Some Properties of Options	249
9.4.3	Economics of Options	250
9.4.4	Black-Scholes Equation	251
9.4.5	General Option Pricing	257

9.5	Swaps	257
9.6	Structured Products.	259
9.7	Exercises.	261
Appendix A: Dynamic Systems		263
Appendix B: Matrices.		281
Appendix C: Normal Distribution Tables		287
