

# Contents

<b>1</b>	<b>Stochastic Processes</b>	<b>1</b>
1.1	Moments of Random Processes	3
1.1.1	Autocorrelation and Autocovariance Function	4
1.1.2	Stationary Stochastic Processes	5
1.1.3	Ergodic Stochastic Processes	6
1.2	Fourier Integrals and Transforms	7
1.2.1	Power Spectral Density Function	8
1.2.2	The Fourier Transform of the Autocorrelation Function	10
1.3	Common Stochastic Processes	12
1.3.1	Gaussian Processes	12
1.3.2	Markov Processes	12
1.3.3	Brownian Process	14
1.3.4	Stationary White Noise	15
1.3.5	Random Variable Case	17
1.3.6	Narrow and Wideband Random Processes	17
1.3.7	Kanai–Tajimi Power Spectrum	18
1.4	Solved Numerical Examples	20
1.5	Exercises	25
<b>2</b>	<b>Representation of a Stochastic Process</b>	<b>27</b>
2.1	Point Discretization Methods	28
2.1.1	Midpoint Method	29
2.1.2	Integration Point Method	29
2.1.3	Average Discretization Method	29
2.1.4	Interpolation Method	30
2.2	Series Expansion Methods	30
2.2.1	The Karhunen–Loève Expansion	30
2.2.2	Spectral Representation Method	35
2.2.3	Simulation Formula for Stationary Stochastic Fields	39

2.3	Non-Gaussian Stochastic Processes . . . . .	41
2.4	Solved Numerical Examples . . . . .	42
2.5	Exercises . . . . .	44
<b>3</b>	<b>Stochastic Finite Element Method . . . . .</b>	<b>47</b>
3.1	Stochastic Principle of Virtual Work . . . . .	47
3.2	Nonintrusive Monte Carlo Simulation . . . . .	49
3.2.1	Neumann Series Expansion Method . . . . .	50
3.2.2	The Weighted Integral Method . . . . .	51
3.3	Perturbation-Taylor Series Expansion Method . . . . .	52
3.4	Intrusive Spectral Stochastic Finite Element Method (SSFEM) . . . . .	54
3.4.1	Homogeneous Chaos . . . . .	54
3.4.2	Galerkin Minimization . . . . .	56
3.5	Closed Forms and Analytical Solutions with Variability Response Functions (VRFs) . . . . .	59
3.5.1	Exact VRF for Statically Determinate Beams . . . . .	60
3.5.2	VRF Approximation for General Stochastic FEM Systems . . . . .	63
3.5.3	Fast Monte Carlo Simulation . . . . .	64
3.5.4	Extension to Two-Dimensional FEM Problems . . . . .	65
3.6	Solved Numerical Examples . . . . .	66
3.7	Exercises . . . . .	68
<b>4</b>	<b>Reliability Analysis . . . . .</b>	<b>71</b>
4.1	Definition . . . . .	72
4.1.1	Linear Limit-State Functions . . . . .	73
4.1.2	Nonlinear Limit-State Functions . . . . .	75
4.1.3	First- and Second-Order Approximation Methods . . . . .	77
4.2	Monte Carlo Simulation (MCS) . . . . .	78
4.2.1	The Law of Large Numbers . . . . .	78
4.2.2	Random Number Generators . . . . .	79
4.2.3	Crude Monte Carlo Simulation . . . . .	80
4.3	Variance Reduction Methods . . . . .	82
4.3.1	Importance Sampling . . . . .	83
4.3.2	Latin Hypercube Sampling (LHS) . . . . .	83
4.4	Monte Carlo Methods in Reliability Analysis . . . . .	84
4.4.1	Crude Monte Carlo Simulation . . . . .	84
4.4.2	Importance Sampling . . . . .	85
4.4.3	The Subset Simulation (SS) . . . . .	85
4.5	Artificial Neural Networks (ANN) . . . . .	88
4.5.1	Structure of an Artificial Neuron . . . . .	88
4.5.2	Architecture of Neural Networks . . . . .	90
4.5.3	Training of Neural Networks . . . . .	91
4.5.4	ANN in the Framework of Reliability Analysis . . . . .	94

4.6 Numerical Examples . . . . .	96
4.7 Exercises . . . . .	98
<b>Appendix A: Probability Theory . . . . .</b>	<b>99</b>
<b>Appendix B: Random Variables . . . . .</b>	<b>109</b>
<b>Appendix C: Subset Simulation Aspects . . . . .</b>	<b>131</b>
<b>References . . . . .</b>	<b>135</b>

Stochastic Finite Element Methods

An Introduction

Papadopoulos, V.; Giovanis, D.G.

2018, XXI, 138 p. 53 illus., 26 illus. in color., Hardcover

ISBN: 978-3-319-64527-8
