1	Introduction	1
	References.	4
2	Ligated Silver and Gold Quantum Clusters: Background of Their Structural, Electronic, and Optical Properties	5
2.1	Introduction	5
2.2	Basics: From Free Electron Model to Electronic Energy Quantization in Metal Nanoclusters	5
2.3	Metal Optical Responses at Different Size Scales.	8
2.4	Time-Dependent Density Functional Theory (TDDFT).	9
2.5	Optical Response from Noble Metal Clusters.	10
2.5.1	Absorption and Emission of Bare Gold Clusters.	10
2.5.2	Absorption and Emission of Bare Silver Clusters	10
2.6	Role of Ligand Protection. Atomically Precise Clusters of Gold and Silver	11
2.6.1	Synthetic Routes	12
2.6.2	Characterization, Structural, Electronic, and Optical Properties	14
	References.	18
3	A Brief Survey of Nonlinear Optics: Second Harmonic Generation and Two-Photon Absorption	21
3.1	Introduction	21
3.2	Nonlinear Optical Phenomena	21
3.3	From Macroscopic to Microscopic Nonlinear Susceptibilities.	24
3.4	Third-Order Nonlinear Process: Two-Photon Absorption	25
3.5	Parametric Versus Nonparametric Processes.	26
	References.	27

4	Computational Evaluation of Optical Nonlinearities:	
	Quantum Chemical Approaches	29
4.1	Response Theory	31
4.2	The Interpretation of the Response Functions	33
4.3	Corrections of Singularities in the Quadratic Response	36
4.4	Qualitative Design of TPA Cross Sections	37
	References	38
5	Design Strategy and Structure-Property Relation for Enhanced	
	Two-Photon Absorption in Ligated Metal Nanoclusters	39
5.1	Introduction	39
5.2	Molecular Models for Large TPA Cross Section. Push–Pull Molecules	39
5.3	Ligand-Core NLO-Phores: Concepts for Design of Enhanced Two-Photon Absorption of Small Ligated Silver Nanoclusters	41
5.4	Design Strategy and Structure-Property Relations	45
	References	46
6	Measurement Techniques of Optical Nonlinearities—	
	Two-Photon Absorption/Fluorescence and Hyper-Rayleigh	
	Scattering	49
6.1	Introduction	49
6.2	Hyper-Rayleigh Scattering	49
	6.2.1 Incoherent and Coherent Nonlinear Characterization	49
	6.2.2 Hyper-Rayleigh Scattering Principles	50
	6.2.3 Experimental Hyper-Rayleigh Scattering Set-up	52
6.3	Two-Photon Absorption	54
	6.3.1 Z-Scan Technique	55
	6.3.2 P-Scan Measurements	57
	6.3.3 Two-Photon Absorption Photoluminescence (TPA PL) Technique	59
6.4	Two-Photon-Excited Fluorescence Cross Section Measurements	60
6.5	Conclusion	61
