## Part I Physical Sensors

|                                                                                                                                                         |    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| <b>Integrable Sensor System for Live Monitoring of Loudspeaker Performances</b> . . . . .                                                               | 3  |
| Gianluca Barile, Giuseppe Ferri, Alfiero Leoni, Mirco Muttillio,<br>Vincenzo Stornelli, Marco Caldari, Marco Palombini and Franco Ripa                  |    |
| <b>Re-configurable Switched Capacitor Sigma-Delta Modulator for MEMS Microphones in Mobiles</b> . . . . .                                               | 9  |
| M. Grassi, F. Conso, G. Rocca, P. Malcovati and A. Baschirotto                                                                                          |    |
| <b>A Low Cost Inclinometer with InkJet-Printed Resistive Readout Strategy</b> . . . . .                                                                 | 15 |
| Bruno Andò, Salvatore Baglio, Vincenzo Marletta<br>and Antonio Pistorio                                                                                 |    |
| <b>Dual Wavelength Botda for Strain/Temperature Discrimination</b> . . . . .                                                                            | 25 |
| A. Minardo, E. Catalano, A. Coscetta and L. Zeni                                                                                                        |    |
| <b>Electrical Characterization of Microstrip Resonators Based on Nanostructured Sensing Materials</b> . . . . .                                         | 29 |
| G. Gugliandolo, A. Mirzaei, M. Bonyani, G. Neri, M. Latino<br>and N. Donato                                                                             |    |
| <b>Graphene Decoration for Gas Detection</b> . . . . .                                                                                                  | 35 |
| Brigida Alfano, Ettore Massera, Maria Lucia Miglietta, Tiziana Polichetti,<br>Chiara Schiattarella and Girolamo Di Francia                              |    |
| <b>(002)-Oriented AlN Thin Films Sputtered on Ti Bottom Electrode for Flexible Electronics: Structural and Morphological Characterization</b> . . . . . | 41 |
| A. Taurino, M.A. Signore, M. Catalano, M. Masieri, F. Quaranta<br>and P. Siciliano                                                                      |    |

## Part II Chemical Sensors

|                                                                                                                                      |           |
|--------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Detection of Tumor Markers and Cell Metabolites in Cell Cultures, Using Nanostructured Chemoresistive Sensors . . . . .</b>       | <b>51</b> |
| N. Landini, B. Fabbri, A. Gaiardo, S. Gherardi, V. Guidi, G. Rispoli, M. Valt, G. Zonta and C. Malagù                                |           |
| <b>Fish Robot Based on Chemical Sensors for Water Monitoring . . . . .</b>                                                           | <b>59</b> |
| Giovanna Marrazza, Andrea Ravalli and Claudio Rossi                                                                                  |           |
| <b>QCM Sensors Based on In<sub>2</sub>O<sub>3</sub> Nano-films Obtained by a Pulsed Plasma Deposition Technique. . . . .</b>         | <b>65</b> |
| Tommaso Addabbo, Andrea Baldi, Mara Bruzzi, Ada Fort, Marco Mugnaini and Valerio Vignoli                                             |           |
| <b>Electrocatalytic Activity of <math>\alpha</math>-MoO<sub>3</sub> Plates Synthesized Through Resistive Heating Route . . . . .</b> | <b>71</b> |
| Emanuela Filippo, Daniela Chirizzi, Francesca Baldassarre, Marco Tepore, Maria Rachele Guascito and Antonio Tepore                   |           |
| <b>A New Resonant Air Humidity Sensor: First Experimental Results . . . . .</b>                                                      | <b>79</b> |
| Nicola A. Lamberti, Monica La Mura, Pasquale D'Uva, Nicola Greco and Valerio Apuzzo                                                  |           |

## Part III Biosensors

|                                                                                                                                                              |            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Food Allergen-IgE Impedance Measurements Evaluation in Allergic Children. . . . .</b>                                                                     | <b>91</b>  |
| Simona Barni, Tommaso Addabbo, Ada Fort, Matteo Becatti, Claudia Fiorillo, Marco Mugnaini, Niccolò Taddei, Valerio Vignoli, Elio Novembre and Francesca Mori |            |
| <b>Enhancement in PDMS-Based Microfluidic Network for On-Chip Thermal Treatment of Biomolecules . . . . .</b>                                                | <b>99</b>  |
| G. Petrucci, N. Lovecchio, M. Nardecchia, C. Parrillo, F. Costantini, A. Nascetti, G. de Cesare and D. Caputo                                                |            |
| <b>A Continuous Flow Microelectrophoretic Module for Protein Separation . . . . .</b>                                                                        | <b>107</b> |
| A. Capuano, A. Adami, V. Mulloni and L. Lorenzelli                                                                                                           |            |
| <b>Thrombin Aptamer-Based Biosensors: A Model of the Electrical Response . . . . .</b>                                                                       | <b>115</b> |
| Eleonora Alfinito, Lino Reggiani, Rosella Cataldo, Giorgio De Nunzio, Livia Giotta and Maria Rachele Guascito                                                |            |

|                                                                                                                                                                       |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Chloramphenicol Determination by New Immunosensor Using Two Different Competitive Formats . . . . .</b>                                                            | <b>123</b> |
| Elisabetta Martini, Mauro Tomassetti, Riccardo Angeloni,<br>Maria Pia Sammartino and Luigi Campanella                                                                 |            |
| <b>Numerical Results on the Exploitation of Gold Nanostructures in Plastic Optical Fibers Based Plasmonic Sensors . . . . .</b>                                       | <b>127</b> |
| N. Cennamo, F. Mattiello, P.A.S. Jorge, R. Sweid, L. De Maria,<br>M. Pesavento and L. Zeni                                                                            |            |
| <b>Part IV Optical Sensors</b>                                                                                                                                        |            |
| <b>Design of an Evanescent Waveguide Sensor Based on a-Si: H Photodiodes for Lab-on-Chip Applications . . . . .</b>                                                   | <b>137</b> |
| Alessio Buzzin, Rita Asquini, Domenico Caputo and Giampiero de Cesare                                                                                                 |            |
| <b>Optoelectronic System-on-Glass for On-Chip Detection of Fluorescence . . . . .</b>                                                                                 | <b>143</b> |
| N. Lovecchio, F. Costantini, M. Nardecchia, G. Petrucci, M. Tucci,<br>P. Mangiapane, A. Nascetti, G. de Cesare and D. Caputo                                          |            |
| <b>Optical Detection of Antioxidant Capacity in Food Using Metal Nanoparticles Formation. Study on Saffron Constituents . . . . .</b>                                 | <b>151</b> |
| Flavio Della Pelle, Annalisa Scroccarello, Aida Santone<br>and Dario Compagnone                                                                                       |            |
| <b>Part V Applications</b>                                                                                                                                            |            |
| <b>A Multicenter Survey About Companion Robot Acceptability in Caregivers of Patients with Dementia . . . . .</b>                                                     | <b>161</b> |
| Grazia D'Onofrio, Daniele Sancarolo, James Oscar, Francesco Ricciardi,<br>Dympna Casey, Keith Murphy, Francesco Giuliani and Antonio Greco                            |            |
| <b>Breath-Printing of Heart Failure in Elderly . . . . .</b>                                                                                                          | <b>179</b> |
| A. Zompanti, P. Finamore, C. Pedone, M. Santonico, S. Grasso,<br>F.R. Parente, G. Ferri, V. Stornelli, D. Lelli, L. Costanzo, R. Antonelli<br>Incalzi and G. Pennazza |            |
| <b>Active Sensors/Actuators-Based Flow and Noise Control for Aerospace Applications . . . . .</b>                                                                     | <b>185</b> |
