

Contents

1	Introduction	1
1.1	Canonical Correlation Analysis and Speech Enhancement	1
1.2	Organization of the Work	2
	References	3
2	Canonical Correlation Analysis	5
2.1	Preliminaries	5
2.2	How CCA Works	8
2.3	The Singular Case	13
	References	14
3	Single-Channel Speech Enhancement in the Time Domain	15
3.1	Signal Model and Problem Formulation	15
3.2	Canonical Linear Filtering	16
3.3	Performance Measures	18
3.4	Optimal Canonical Filters from the Desired and Noisy Signals	19
3.5	Optimal Canonical Filters from the Noise and Noisy Signals	27
	References	35
4	Single-Channel Speech Enhancement in the STFT Domain	37
4.1	Signal Model and Problem Formulation	37
4.2	Canonical Linear Filtering	38
4.3	Performance Measures	40
4.4	Optimal Canonical Filters from the Desired and Noisy Signals	41
4.5	Optimal Canonical Filters from the Noise and Noisy Signals	49
	References	57
5	Multichannel Speech Enhancement in the Time Domain	59
5.1	Signal Model and Problem Formulation	59
5.2	Canonical Linear Filtering	60
5.3	Performance Measures	62

5.4	Optimal Canonical Filters from the Desired and Noisy Signals . . .	63
5.5	Optimal Canonical Filters from the Noise and Noisy Signals	71
5.6	Other Possibilities	76
	References	77
6	Multichannel Speech Enhancement in the STFT Domain	79
6.1	Signal Model and Problem Formulation	79
6.2	Canonical Linear Filtering	80
6.3	Performance Measures	82
6.4	Optimal Canonical Filters from the Desired and Noisy Signals . . .	83
6.5	Optimal Canonical Filters from the Noise and Noisy Signals	93
6.6	Other Possibilities	99
	References	101
7	Adaptive Beamforming	103
7.1	Signal Model and Problem Formulation	103
7.2	Canonical Linear Filtering	104
7.3	Performance Measures	106
7.4	Optimal Canonical Filters from the Desired and Noisy Signals . . .	107
7.5	Optimal Canonical Filters from the Noise and Noisy Signals	109
	References	117
