

Contents

1	Review of Engineering Mathematics	1
1.1	Solution of Linear Systems of Equations	1
1.1.1	Revision of Theory	2
1.1.2	Worked Examples	4
1.2	Analytical Integration	8
1.3	Numerical Integration	8
1.3.1	Revision of Theory	9
1.3.2	Worked Examples	10
1.4	Supplementary Problems	14
2	Rods and Trusses	17
2.1	Fundamentals and Analytical Treatment	17
2.2	Rod Elements	20
2.2.1	Revision of Theory	20
2.2.2	Worked Examples	25
2.3	Truss Structures	38
2.3.1	Revision of Theory	38
2.3.2	Worked Examples	39
2.4	Supplementary Problems	58
3	Euler–Bernoulli Beams and Frames	63
3.1	Fundamentals and Analytical Treatment	63
3.1.1	Euler–Bernoulli Beams	63
3.1.2	Generalized Beams	67
3.2	Beam Elements	70
3.2.1	Revision of Theory	70
3.2.2	Worked Examples	74
3.3	Generalized Beam Elements	88
3.3.1	Revision of Theory	88
3.3.2	Worked Examples	89

3.4	Rotation of Elements—Plane Frame Structures	105
3.4.1	Revision of Theory: Rotation of Beam Elements	105
3.4.2	Revision of Theory: Rotation of Generalized Beam Elements	106
3.4.3	Worked Examples	112
3.5	Supplementary Problems	138
4	Timoshenko Beams	145
4.1	Fundamentals and Analytical Treatment	145
4.2	Beam Elements	149
4.2.1	Revision of Theory	149
4.2.2	Worked Examples	151
4.3	Supplementary Problems	164
5	Symmetry	167
5.1	Placement of Nodes	167
5.2	Using Symmetry	169
5.3	Examples	171
5.4	Supplementary Problems	176
	Appendix A: Answers to Supplementary Problems	179
	References	203
	Index	205

Computational Statics Revision Course

Javanbakht, Z.; Öchsner, A.

2018, XVI, 206 p. 138 illus., Hardcover

ISBN: 978-3-319-67461-2
