1	Theoretical and Practical Solutions in Remote Sensing	1
	Margarita N. Favorskaya and Lakhmi C. Jain	
1.1	Introduction	1
1.2	Chapters Included in the Book	2
1.3	Conclusions	7
	References	7
2	Multidimensional Image Models and Processing	11
	Victor Krasheninnikov and Konstantin Vasil'ev	
2.1	Introduction	12
2.2	Mathematical Models of Images	14
2.2.1	Random Fields	14
2.2.2	Tensor Models of Random Fields	15
2.2.3	Autoregressive Models of Random Fields	18
2.2.4	Wave Models of Random Fields	25
2.2.5	Random Fields on Surfaces	28
2.3	Image Filtering	32
2.3.1	Efficiency of Optimal Image Filtering	33
2.3.2	Tensor Kalman Filter	35
2.4	Anomalies Detection in Noisy Background	37
2.4.1	Optimal Algorithms for Signal Detection	38
2.4.2	Efficiency of Anomaly Detection	42
2.5	Image Alignment	45
2.5.1	Tensor Shift Filtering	45
2.5.2	Random Field Alignment of Images with Interframe Geometric Transformation	47
2.5.3	Alignment of Two Frames of Gaussian Random Field	48
2.5.4	Method of Fixed Point at Frame Alignment	51

2.6	Adaptive Algorithms of Image Processing	55
2.6.1	Pseudo-Gradient Adaptive Algorithms	56
2.6.2	Pseudo-Gradient Adaptive Prediction Algorithms	59
2.6.3	Pseudo-Gradient Algorithms of Image Alignment	61
2.7	Conclusions	62
	References	63
3	Vision-Based Change Detection Using Comparative Morphology	65
	Yu. Vizilter, A. Rubis, O. Vygolov and S. Zheltov	
3.1	Introduction	66
3.2	Related Works	67
3.3	Methodology	69
3.3.1	Comparative Morphology as a Generalized Scheme of Morphological Image Analysis	70
3.3.2	Comparative Filtering as a Generalization of Morphological Filtering	72
3.3.3	Comparative Filters Based on Guided Contrasting	74
3.3.4	Manifold Learning, Diffusion Maps and Shape Matching	76
3.3.5	Generalized Diffusion Morphology and Comparative Filters Based on Diffusion Operators	79
3.3.6	Image and Shape Matching Based on Diffusion Morphology	82
3.3.7	Change Detection Pipeline Based on Comparative Filtering	84
3.4	Experiments	86
3.4.1	Qualitative Change Detection Experiments	86
3.4.2	Quantitative Change Detection Experiments	87
3.5	Conclusions	91
	References	92
4	Methods of Filtering and Texture Segmentation of Multicomponent Images	97
	E. Medvedeva, I. Trubin and E. Kurbatova	
4.1	Introduction	98
4.2	Method for Nonlinear Multidimensional Filtering of Images	99
4.2.1	Mathematical Model of Multispectral Images	100
4.2.2	Nonlinear Multidimensional Filtering	102
4.3	Method of Texture Segmentation	110
4.4	Conclusions	116
	References	117

5	Extraction and Selection of Objects in Digital Images by the Use of Straight Edges Segments	119
	V.Yu. Volkov	
5.1	Introduction	120
5.2	Related Works	121
5.3	Problem Statement and Method of Solution	124
5.3.1	Problem Statement and Tasks	124
5.3.2	Image Processing Structure	124
5.3.3	Advanced Algorithm of Straight Edge Segments Extraction	126
5.3.4	Lines Grouping Algorithms for Object Description and Selection	129
5.4	Modelling of Straight Edge Segments Extraction	131
5.5	Modelling of Segment Grouping and Object Detection, Selection and Localization	134
5.6	Experimental Results for Aerial, Satellite and Radar Images	137
5.7	Conclusions	143
	References	145
6	Automated Decision Making in Road Traffic Monitoring by On-board Unmanned Aerial Vehicle System	149
	Nikolay Kim and Nikolay Bodunkov	
6.1	Introduction	150
6.2	Algorithm for Classification of Road Traffic Situation	152
6.3	Alphabet Forming for Description of Situation Class	153
6.4	Detection of Scene Objects	155
6.5	Forming Observed Scene Descriptions	159
6.6	Decision Making Procedure	163
6.7	Use of Statistical Criteria for Decision Making	164
6.8	Use of Functional Criteria Model	167
6.9	Examples	170
6.10	Conclusions	173
	References	173
7	Warping Techniques in Video Stabilization	177
	Margarita N. Favorskaya and Vladimir V. Buryachenko	
7.1	Introduction	177
7.2	Development of Warping Techniques	179
7.3	Related Works	181
7.3.1	Overview of Warping Techniques in 2D Stabilization	181
7.3.2	Overview of Warping Techniques in 3D Stabilization	183

7.3.3	Overview of Inpainting Methods for Boundary Completion	187
7.4	Scene Classification	189
7.4.1	Extraction of Key Frames	189
7.4.2	Estimation of Scene Depth	191
7.5	3D Warping During Stabilization	192
7.5.1	Extraction of Structure from Motion	193
7.5.2	3D Camera Trajectory Building	195
7.5.3	Warping in Scenes with Small Depth	196
7.5.4	Warping Using Geometrical Primitives	197
7.5.5	Local 3D Warping in Scenes with Large Depth	200
7.6	Warping During Video Inpainting	203
7.7	Experimental Results	208
7.8	Conclusions	211
	References	212
8	Image Deblurring Based on Physical Processes of Blur Impacts	217
	Andrei Bogoslovsky, Irina Zhigulina, Eugene Bogoslovsky and Vitaly Vasilyev	
8.1	Introduction	218
8.2	Overview of Blur and Deblurring Methods	219
8.3	Model of Linear Blur Formation	228
8.3.1	Discrete-Analog Representation of Illumination	228
8.3.2	Small Linear Blur	230
8.3.3	Large Linear Blur	237
8.4	Non-linear Blur	241
8.5	Conclusions	248
	References	248
9	Core Algorithm for Structural Verification of Keypoint Matches	251
	Roman O. Malashin	
9.1	Introduction	252
9.2	Overview of Keypoint-Based Methods	253
9.3	Notation	255
9.4	Training Datasets	259
9.5	Algorithms of Primary Outlier Elimination	260
9.5.1	Nearest Neighbour Ratio Test	260
9.5.2	Crosscheck	261
9.5.3	Exclusion of Ambiguous Matches	261
9.5.4	Comparison and Conclusion	263
9.6	Geometrical Verification of Matches	264
9.6.1	Hough Clustering of Keypoint Matches	264

9.6.2	Verification of Cluster Hypotheses	269
9.7	Confidence Estimation	273
9.8	Application for Practical Tasks	275
9.8.1	Matching of Images of 3D Scenes	276
9.8.2	Image Retrieval Using Bag of Words	277
9.8.3	Registration of Aerospace Images	280
9.9	Conclusions	283
	References	283
10	Strip-Invariants of Double-Sided Matrix Transformation of Images	287
	Leonid Mironovsky and Valery Slaev	
10.1	Introduction	288
10.2	Double-Sided Matrix Transformation of Images	289
10.3	Invariant Images (Problem Statement)	292
10.4	Analysis of Strip-Invariant Images	298
10.4.1	Existence Criteria of Strip-Invariant Images for Case $m = n$, $A = B$	298
10.4.2	Renunciation of Matrices Equality Condition $A = B$	307
10.4.3	Abandonment of Conditions of Symmetry and Orthogonality of Matrices A and B	310
10.5	Getting Invariant Images Using Eigenvectors of Matrices	312
10.6	Synthesis of Matrices by Given Invariant Images	316
10.7	Conclusions	318
	References	318
11	The Fibonacci Numeral System for Computer Vision	321
	Oleksiy A. Borysenko, Vyacheslav V. Kalashnikov, Nataliya I. Kalashnykova and Svetlana M. Matsenko	
11.1	Introduction	322
11.2	Fibonacci Numbers	325
11.3	Fibonacci Numbers and Fibonacci Codes	326
11.4	Minimal and Maximum Representation Forms for Fibonacci Numbers	328
11.4.1	Estimate of the Noise Immunity of the Fibonacci Codes in Their Minimal Form	329
11.4.2	Noise-Proof Fibonacci Counting	335
11.5	Decoding the Fibonacci Combinations in the Minimal Representation Form	338
11.6	Conclusions and Future Research	342
	References	343
