Part I Literature Survey and Trends

- 1 Latest Advancement in Cloud Technologies 3**
 - 1.1 Introduction to Cloud Computing 3
 - 1.1.1 Historical Evolution and Background 4
 - 1.1.2 Concept 4
 - 1.1.3 Technologies 12
 - 1.1.4 Cloud Platforms 14
 - 1.1.5 Tools 15
 - 1.1.6 Challenges 17
 - 1.2 Cloud Manufacturing 18
 - 1.2.1 Historical Evolution and Background 18
 - 1.2.2 Concept 20
 - 1.2.3 Technologies 24
 - 1.2.4 Research Initiatives 27
 - 1.2.5 Applications 28
 - 1.2.6 Challenges 28
 - 1.3 Conclusions 29
 - References 29
- 2 Latest Advancement in CPS and IoT Applications 33**
 - 2.1 Introduction 33
 - 2.2 Key Enabling Technologies in CPS and IoT 35
 - 2.2.1 Wireless Sensor Network 36
 - 2.2.2 Cloud Technologies 36
 - 2.2.3 Big Data 37
 - 2.2.4 Industry 4.0 38
 - 2.2.5 RFID Technology 39
 - 2.3 Key Features and Characteristics of CPS and IoT 40

2.4	Applications of CPS and IoT	43
2.4.1	Service Oriented Architecture	43
2.4.2	Cloud Manufacturing	45
2.4.3	Cyber-Physical Production Systems	48
2.4.4	IoT-Enabled Manufacturing System	52
2.4.5	CPS in Cloud Environment	56
2.5	Conclusions	58
	References	59
3	Challenges in Cybersecurity	63
3.1	Introduction	63
3.2	Internet of Things	64
3.3	Remote Equipment Control	65
3.4	Security Concerns and Methods	67
3.4.1	Security Concerns	67
3.4.2	Security Methods and Architecture	68
3.4.3	Cyber-Physical Systems	72
3.5	Future Outlook	73
3.6	Conclusions	74
	References	77
 Part II Cloud-Based Monitoring, Planning and Control in CPS		
4	Machine Availability Monitoring and Process Planning	83
4.1	Introduction	83
4.2	Literature Review	84
4.3	Concept of Distributed Process Planning	88
4.4	Architecture Design of a Web-Based DPP	90
4.5	Functional Analysis of Web-DPP	91
4.5.1	Supervisory Planning	93
4.5.2	Execution Control	93
4.5.3	Operation Planning	95
4.6	Web-DPP Prototype Implementing	96
4.7	A Case Study	97
4.8	Conclusions	101
	References	102
5	Cloud-Enabled Distributed Process Planning	105
5.1	Introduction	105
5.2	Multi-tasking Machines and Mill-Turn Parts	107
5.3	Methodology	111
5.3.1	Machine Modes	112
5.3.2	Machine Mode Transitions	113
5.3.3	Setup Frames	113

5.3.4	Setup Planning and Setup Merging	114
5.3.5	New FBs and FB Network Generation	115
5.4	Case Study	116
5.5	Discussions	120
5.6	Conclusions	121
	References	122
6	Adaptive Machining Using Function Blocks	125
6.1	Introduction	125
6.2	Function Block Concept	127
6.2.1	Function Blocks	127
6.2.2	Function Block Types.	127
6.2.3	Execution of Function Block.	130
6.2.4	Internal Behaviour of Function Block	131
6.3	Enriched Machining Features.	132
6.3.1	Machining Features	132
6.3.2	Enriched Machining Features	134
6.3.3	Generic Machining Process Sequencing.	140
6.4	Adaptive Machining Feature Sequencing	143
6.4.1	Reachability-Based Approach	144
6.4.2	Case Study	153
6.5	Adaptive Setup Merging and Dispatching.	157
6.6	Conclusions	161
	References	161
7	Condition Monitoring for Predictive Maintenance	163
7.1	Introduction	163
7.2	Fundamentals of Prognosis	165
7.3	Prognostic Methods	166
7.3.1	Physics-Based Models	167
7.3.2	AI-Based Data-Driven Models	168
7.3.3	Statistical Data-Driven Models	169
7.3.4	Model-Based Approach	171
7.3.5	Comparison of Prognostic Models.	174
7.4	Prognosis-as-a-Service in Cloud Manufacturing	176
7.4.1	Benefits of Cloud-Enabled Prognosis.	176
7.4.2	Supporting Technologies.	179
7.4.3	Implementing Prognosis in the Cloud	181
7.4.4	Prognosis Applications	183
7.5	Challenges and Limitations	186
7.6	Conclusions	188
	References	189

Part III Sustainable Robotic Assembly in CPS Settings

8	Resource Efficiency Calculation as a Cloud Service	195
8.1	Introduction	195
8.2	Related Work	195
8.3	System Overview	197
8.4	Methodology and Implementation	197
8.4.1	Denavit-Hartenberg (D-H) Notation	198
8.4.2	Forward Kinematics	198
8.4.3	Inverse Kinematics	199
8.4.4	Inverse Dynamics	201
8.4.5	Energy Consumption	202
8.4.6	Energy Optimisation	202
8.5	Case Studies	203
8.5.1	Energy Map of Robot Workspace	203
8.5.2	Energy Measurement in Predefined Paths	203
8.6	Conclusions	207
	References	207
9	Safety in Human-Robot Collaborative Assembly	211
9.1	Introduction	211
9.2	Human Robot Collaboration	213
9.3	Depth Sensor-Driven Active Collision Avoidance	217
9.3.1	Kinect Sensors Calibration	217
9.3.2	Depth Image Capturing	218
9.3.3	Depth Image Processing	219
9.3.4	Minimum Distance Calculation	222
9.3.5	Active Collision Avoidance	222
9.3.6	Velocity Detection	225
9.4	System Verification	227
9.5	A Remote Assembly Application	229
9.5.1	System Configuration	229
9.5.2	System Implementation	231
9.5.3	Case Study	235
9.6	Conclusions	239
	References	240
10	Cloud Robotics Towards a CPS Assembly System	243
10.1	Introduction	243
10.2	Cloud Robotics	244
10.2.1	Cloud Robotics at System Level	244
10.2.2	Cloud Robotics at Application Level	246
10.3	ICMS: an Example of Cloud Robotics System	247
10.3.1	Integration Mechanisms in ICMS	248
10.3.2	Cloud Robotic Application	250

10.4	Implementation and Case Studies	252
10.4.1	Cloud-Based Manufacturing Chain	252
10.4.2	Human-Robot Collaboration	254
10.4.3	Minimisation of Robot Energy Consumption	255
10.5	Conclusions	256
	References	257
11	Context-Aware Human-Robot Collaborative Assembly	261
11.1	Introduction	261
11.2	Gesture Recognition	262
11.2.1	Gesture Recognition for Human-Robot Collaboration	263
11.2.2	Sensor Technologies	263
11.2.3	Gesture Identification	267
11.2.4	Gesture Tracking	270
11.2.5	Gesture Classification	273
11.2.6	Future Trends of Gesture Recognition	276
11.3	Human Motion Prediction	277
11.3.1	Assembly Tasks Sequence	277
11.3.2	HMM Human Motion Prediction	280
11.3.3	Experiment	282
11.3.4	Discussions	284
11.4	AR-Based Worker Support System	284
11.4.1	System Architecture	285
11.4.2	AR Assembly Information Registrar	287
11.4.3	Case Study	288
11.5	Conclusions	289
	References	290

Part IV CPS Systems Design and Lifecycle Analysis

12	Architecture Design of Cloud CPS in Manufacturing	297
12.1	Introduction	297
12.1.1	State-of-the-Art Cloud Manufacturing Approaches	298
12.1.2	Supporting Technologies for Cloud Manufacturing	299
12.1.3	Recap	300
12.2	Cloud Manufacturing Framework	300
12.2.1	Manufacturing Capability and Manufacturing Resource	301
12.2.2	Cloud Architecture	304
12.3	Interoperability and Other Issues	309
12.3.1	Standardised File Formats	309
12.3.2	STEP/STEP-NC to Bridge the Gap	310
12.3.3	Approaches to Achieving Product Information Sharing	312

12.4	Standardisation for Cloud Manufacturing	314
12.5	Conclusions	318
	References	320
13	Product Tracking and WEEE Management	325
13.1	Introduction	325
13.2	System Framework	328
13.2.1	System Requirements and Roles	328
13.2.2	WR2Cloud: System Framework	331
13.3	Product Tracking Mechanism	332
13.3.1	WR2Cloud	333
13.3.2	'Cloud + QR'-based Tracking Methodology	335
13.4	Implementations and Case Studies	336
13.4.1	Case Study 1: Cloud WEEE Management at Product Level	336
13.4.2	Case Study 2: Cloud-based WEEE Management at National/International Level	338
13.5	Conclusions	340
	References	344
14	Big Data Analytics for Scheduling and Machining	347
14.1	Introduction	347
14.1.1	Algorithms Used in Big Data Analytics	347
14.1.2	Tools Used in Big Data Analytics	348
14.2	Background Information	348
14.2.1	Related Works on Scheduling	348
14.2.2	Related Works on Machining Optimisation	350
14.2.3	Big Data Analytics Application	351
14.3	Big Data Analytics for Shop-Floor Scheduling	352
14.3.1	Big Data Analytics Based Fault Prediction in Scheduling	352
14.3.2	System Architecture	353
14.3.3	A Simplified Case Study	359
14.4	Big Data Analytics Based Optimisation for Machining	361
14.4.1	Analysis of Machining Process	361
14.4.2	Enriched Distributed Process Planning (DPP)	362
14.4.3	Solution Strategy of Enriched DPP	363
14.4.4	A Simplified Case Study	365
14.5	Conclusions	371
	References	372
15	Outlook of Cloud, CPS and IoT in Manufacturing	377
15.1	Introduction	377
15.2	Drivers, Barriers and Initiatives	379
15.3	Characteristics and Requirements	381

15.3.1	Systems of Systems (SoS)	384
15.3.2	Internet of Things (IoT)	384
15.3.3	Cloud Manufacturing (CM)	385
15.3.4	Big Data	385
15.3.5	Industry 4.0	386
15.3.6	Challenges	387
15.3.7	Discussions	388
15.4	Representative Examples of CPS in Manufacturing	388
15.4.1	Example 1: Service-Oriented Architecture	388
15.4.2	Example 2: Cloud Manufacturing	391
15.4.3	Example 3: Adaptive Manufacturing Systems	391
15.4.4	Example 4: Model-Driven Manufacturing Systems	393
15.5	Future Research Directions	394
15.6	Conclusions	396
	References	396
	Index	399

Cloud-Based Cyber-Physical Systems in Manufacturing

Wang, L.; Wang, X.V.
