## Part I Applications in Engineering

|          |                                                  |     |
|----------|--------------------------------------------------|-----|
| <b>1</b> | <b>Micro-Electro-Mechanical-Systems (MEMS)</b>   | 3   |
| 1.1      | Derivation of the Basic Model and Its Variations | 3   |
| 1.1.1    | The Elastic Problem                              | 4   |
| 1.1.2    | The Electric Problem                             | 6   |
| 1.1.3    | An Uncoupled Local Model                         | 7   |
| 1.1.4    | An Uncoupled Non-local Model                     | 9   |
| 1.2      | Mathematical Analysis                            | 12  |
| 1.2.1    | A Non-local Parabolic Problem                    | 12  |
| 1.2.2    | A Non-local Hyperbolic Problem                   | 47  |
|          | References                                       | 61  |
| <b>2</b> | <b>Ohmic Heating Phenomena</b>                   | 65  |
| 2.1      | Ohmic Heating of Foods                           | 65  |
| 2.1.1    | Derivation of the Basic Model and Its Variations | 65  |
| 2.1.2    | Local Existence and Monotonicity                 | 69  |
| 2.1.3    | Stationary Problem                               | 73  |
| 2.1.4    | Stability                                        | 79  |
| 2.1.5    | Finite-Time Blow-Up                              | 85  |
| 2.2      | A Non-local Thermistor Problem                   | 92  |
| 2.2.1    | Neumann Problem                                  | 92  |
| 2.2.2    | Robin Problem                                    | 95  |
| 2.2.3    | Dirichlet Problem                                | 98  |
|          | References                                       | 106 |
| <b>3</b> | <b>Linear Friction Welding</b>                   | 109 |
| 3.1      | Derivation of the Model                          | 109 |
| 3.2      | The Exponential Case                             | 114 |

|                                        |                                                                         |            |
|----------------------------------------|-------------------------------------------------------------------------|------------|
| 3.3                                    | Numerical Results                                                       | 124        |
| 3.3.1                                  | The Soft Material Case                                                  | 124        |
| 3.3.2                                  | The Hard Material Case                                                  | 126        |
|                                        | References                                                              | 128        |
| <b>4</b>                               | <b>Resistance Spot Welding</b>                                          | <b>131</b> |
| 4.1                                    | Derivation of the Non-local Model                                       | 131        |
| 4.2                                    | The Mathematical Problem                                                | 136        |
| 4.3                                    | The Numerical Scheme                                                    | 137        |
| 4.4                                    | Stability                                                               | 139        |
| 4.5                                    | Error Estimates                                                         | 143        |
| 4.6                                    | Numerical Experiments                                                   | 150        |
|                                        | References                                                              | 158        |
| <b>Part II Applications in Biology</b> |                                                                         |            |
| <b>5</b>                               | <b>Gierer–Meinhardt System</b>                                          | <b>163</b> |
| 5.1                                    | Derivation of the Non-local Model                                       | 163        |
| 5.2                                    | Mathematical Analysis                                                   | 168        |
| 5.2.1                                  | Global-in-time Existence                                                | 168        |
| 5.2.2                                  | ODE Type Blow-Up                                                        | 176        |
| 5.2.3                                  | Diffusion Driven Blow-Up                                                | 179        |
| 5.2.4                                  | Blow-Up Rate and Blow-Up Pattern                                        | 189        |
|                                        | References                                                              | 192        |
| <b>6</b>                               | <b>A Non-local Model Illustrating Replicator Dynamics</b>               | <b>195</b> |
| 6.1                                    | Derivation of the Non-local Model                                       | 195        |
| 6.2                                    | Mathematical Analysis                                                   | 200        |
| 6.2.1                                  | Local Existence and Extendability of Weak Solutions                     | 201        |
| 6.2.2                                  | Global Existence Versus Blow-Up                                         | 220        |
|                                        | References                                                              | 225        |
| <b>7</b>                               | <b>A Non-local Model Arising in Chemotaxis</b>                          | <b>229</b> |
| 7.1                                    | Derivation of the Non-local Model                                       | 229        |
| 7.2                                    | Mathematical Analysis                                                   | 231        |
| 7.2.1                                  | Preliminaries                                                           | 231        |
| 7.2.2                                  | Blow-Up Results                                                         | 233        |
