

Preface

The field of AHP decision-making is in continuous development. Most recently, the Creative Decisions Foundation has launched its new Super Decisions v3. This version constitutes a drastic departure from the previous versions. Creative Decisions Foundation may either maintain both current software versions (v2 and v3) in operation, so practitioners may take advantage of the different strengths of these two versions, or may decide to gradually phase out Super Decisions v2; however, which path will be taken is still unknown. While Super Decisions v2 has attractive graphical features, Super Decisions v3 offers an easy interface, in particular for ratings models. This convinced us of the need to write a book, which would allow practitioners and scholars to learn, use, and teach AHP using Super Decisions v3. While the theoretical part of this book is basically the same as in our previous book *Practical Decision Making: An Introduction to the Analytic Hierarchy Process (AHP) Using Super Decisions v2*, the practical part is taught using the newly released Super Decisions v3.
