Part I Strategies

1 Definitions of Strategies	3
References	4
2 Quality-oriented Strategies	5
2.1 Introduction	5
2.2 Quality Definitions	6
2.3 Quality Development in the US (Before the Quality Revolution in the Mid-1980s)	7
2.4 Quality Organization in Japan	10
2.4.1 Implementation of the American Quality Methods	10
2.4.2 The Integrated Japanese Quality System	11
2.5 Total Quality Strategies After the Quality Revolution—Universal Views	13
2.5.1 USA—Malcolm Baldrige National Quality Award (MBNQA)	13
2.5.2 Europe	16
2.5.3 Australia	17
2.5.4 Cultural/Geographical Styles—East Versus West (China Versus Australia)	18
2.6 Quality Management Theories and Practices—Usage Aspects	22
2.6.1 Logistics Versus Manufacturing	22
2.6.2 Contribution of QM Tools and Practices to Project Management Performance	24
2.7 Soft Versus Hard Quality Management Practices	27
References	28

3 Flexibility-oriented Strategies	31
3.1 Introduction	31
3.2 Flexibility in Manufacturing Systems	33
3.2.1 Flexible Manufacturing Systems (FMSs)	33
3.2.2 Classifications of Flexibility in Manufacturing Systems	35
3.2.3 Flexibility Types and Measures (Dimensions/Metrics)	36
3.3 Flexibility in Logistic Systems	42
3.4 Flexibility of Generic Objects	44
3.4.1 Clouds Representation	44
3.4.2 Flexibility Aspects and Analysis of Several Generic Objects	46
3.4.3 Context Perspective—Information, Manufacturing (or Service)	50
3.5 Flexibility in Supply Chains	52
3.6 Strategic Flexibility	53
References	55

Part II Techniques

4 Design of Experiments (DOE)	61
4.1 Introduction	61
4.1.1 Guidelines	61
4.1.2 Fisher's Basic DOE Principles	62
4.1.3 Factorial Experiments	62
4.2 Impact of Flexibility Factors in Flexible Manufacturing Systems—A Fractional Factorial Design of a Simulation Experiment	64
4.2.1 The Selected Factors (Independent Variables), Their Levels and the Simulation Design	64
4.2.2 Response (Dependent Variable)	66
4.2.3 Simulation Analysis	66
4.2.4 Some Results	67
4.2.5 Concluding Remarks	67
4.3 Prior Research Is the Key to Fractional Factorial Design—A Fractional Factorial Design of a Physical Experiment	68
4.3.1 The Selected Factors (Independent Variables) and Their Levels	68
4.3.2 Response (Dependent Variable)	69
4.3.3 Choice of the Design	69
4.3.4 Analysis of the First Data Set	71
4.3.5 Analysis of the Second Data Set and Some Concluding Remarks	71

4.4	Flexibility Factors in Logistics Systems—A Full Factorial Design to Investigate a Calculated Complex Deterministic Expression . . .	72
4.4.1	The Design and Its Rationale	73
4.4.2	Analysis and Results	74
4.4.3	Interpretation of the Interaction Results	75
4.5	Taguchi’s Experimental Design Techniques	75
4.5.1	A Quality Engineering Strategy	75
4.5.2	Classical DOE Versus Taguchi’s Parameter Design Structure	77
4.5.3	Parameter Design Experimental Structure (Inner and Outer Arrays)	78
4.5.4	Signal to Noise Ratios (S/N)	78
4.5.5	Summary	79
	References	79
5	Petri Nets	81
5.1	Introduction	81
5.2	Petri Nets and Their Time Modeling	82
5.3	Decomposing TPNs of Open Queuing Networks	84
5.4	TPN Based Expected Station Utilization at Steady State	87
5.4.1	Modeling Disturbances	89
5.5	TPNs as a Verification Tool of Simulation Models at Steady State	90
5.6	Weaving Processes—An Additional Application of Timed Petri Nets	94
5.6.1	Manufacturing Assumptions Describing the Weaving Process	94
	References	98
6	Quality Function Deployment (QFD)	101
6.1	Introduction	101
6.2	Quality Function Deployment—The Original Version	101
6.3	Quality Function Deployment—An Enhanced View	103
6.4	Linking Improvement Models to Manufacturing Strategies	104
6.4.1	Deployment of the Improvement Needs	104
6.5	Strategy Maps as Improvement Paths of Enterprises	108
6.5.1	Building a Strategy Map	112
6.5.2	A Detailed Case	113
6.6	A QFD Top–Down Framework for Deploying Flexibility in Supply Chains	117
	References	120
