

# Contents

<b>1 Basic Concepts of the Photochemistry of Semiconductor Nanoparticles</b>	<b>1</b>
1.1 Light Absorption by Bulk and Nanocrystalline Semiconductors	6
1.2 Influence of Surface States on the Photochemical Properties of Semiconductor NPs	14
1.3 Influence of Size Dependences of CB and VB Levels	19
1.4 Photoinduced Charging of Semiconductor NPs	23
References	29
<b>2 Semiconductor-Based Photocatalytic Systems for the Solar-Light-Driven Water Splitting and Hydrogen Evolution</b>	<b>39</b>
2.1 Photocatalytic Systems Based on the Wide-Band-Gap Semiconductors and Sensitizers	41
2.2 Photocatalytic Systems Based on the Binary and More Complex Semiconductor Heterostructures	48
2.3 Photocatalytic Systems Based on the Metal-Doped Wide-Band-Gap Semiconductors	55
2.4 Photocatalytic Systems Based on the Nonmetal-Doped Wide-Band-Gap Semiconductors	58
2.5 Photocatalytic Systems Based on the Metal-Sulfide Semiconductors	61
2.6 Emerging Semiconductor Photocatalysts for the Solar Hydrogen Production	71
2.7 New-Generation Co-Catalysts for the Photocatalytic Hydrogen Production	85
2.8 Stoichiometric Water Splitting Under the Illumination with the Visible Light	88
References	93

<b>3</b>	<b>Semiconductor-Based Photocatalytic Systems for the Reductive Conversion of CO<sub>2</sub> and N<sub>2</sub></b>	127
3.1	Photocatalytic Reduction of Carbon Dioxide	128
3.2	Photocatalytic Fixation of Dinitrogen	146
	References	152
<b>4</b>	<b>Semiconductor-Based Liquid-Junction Photoelectrochemical Solar Cells</b>	161
4.1	Principles and Designs of Semiconductor NP-Sensitized Solar Cells	161
4.2	Basic Photoelectrochemical Characteristics of SSSCs	166
4.3	Nanocrystalline Photoanodes Produced by the Ex Situ Deposition of Sensitizer NPs	170
4.4	Nanocrystalline Photoanodes Produced by the In Situ Deposition of Sensitizer NPs	182
4.5	Making Progress in SSSCs—Toward More Efficient and Less Toxic Photoelectrodes	203
4.6	Nanocrystalline Semiconductor Counter-Electrodes for SSSCs	217
	References	227
<b>5</b>	<b>Synthesis of Nanocrystalline Photo-Active Semiconductors</b>	241
5.1	Colloidal Semiconductors	242
5.2	Nanocrystalline Powdered Semiconductors	251
5.3	Nanocrystalline Films of Photo-Active Semiconductors	260
5.4	Mesoporous Photo-Active Semiconductor Nanomaterials	264
5.5	Spatially Organized Nanocrystalline Photo-Active Semiconductors	268
5.6	Nanocrystalline Photo-Active Semiconductors on Carriers	271
5.7	Doped Semiconductor Nano-Photocatalysts	273
5.8	Bi- (Multi-) Component Photo-Active Semiconductor Nanostructures	275
5.9	Photo-Active Semiconductor/Metal Nanostructures	281
	References	284
<b>6</b>	<b>Probing with Light—Optical Methods in Studies of Nanocrystalline Semiconductors</b>	319
6.1	A Brief Characterization of the Spectral Studies of Nano-Semiconductors	319
6.2	Studies of Nano-Photocatalysts by the Electron Absorption Spectroscopy	321
6.3	Luminescence Spectroscopy as a Tool for the Studies of Nanocrystalline Semiconductors	329
6.4	Studies of Nanocrystalline Semiconductors by the Time-Resolved Photolysis Techniques	339

6.5	Studies of Nanocrystalline Semiconductors Using Raman Scattering Spectroscopy . . . . .	350
6.6	Studies of Colloidal Semiconductor-Based Systems Using Dynamic Light Scattering . . . . .	356
	References . . . . .	364
<b>Index</b>	. . . . .	<b>373</b>

Solar Light Harvesting with Nanocrystalline  
Semiconductors

Stroyuk, O.

2018, XXXI, 378 p. 168 illus., 149 illus. in color.,

Hardcover

ISBN: 978-3-319-68878-7
