**Part I Understanding Software Engineering and Archaeology
Co-research**

1 Introduction	3
Software Engineering and Archaeology, So Far Away?	3
Illustrating Knowledge Generation Based on Archaeological Data	4
Terminology Adoption	6
Book Outline	7
2 Prior Research Design	9
Initial Questions and Goals	9
“Design Science Methodology” in Practice	10

Part II Software Knowledge Generation Foundations

3 Existing Techniques and Tools	15
Introduction	15
Tools for Detecting Conceptual Necessities	16
Conceptual Modeling as Knowledge Representation Technique	16
Tools for Detecting Process Necessities	18
Methods for Extracting and Characterizing Cognitive Processes in Knowledge Generation	19
Tools for Detecting Interaction and Presentation Necessities	30
Determining the Suitability of Interaction and Software Presentation Mechanisms	30
4 Dealing with Archaeological Particularities	33
Introduction	33
Archaeological Consolidated Knowledge Particularities	34
A Methodological Proposal for Integrating Discourse Analysis in Software Engineering	34

Archaeological Cognitive Processes Particularities	55
A Characterization of Cognitive Processes in Archaeology.	55
How to Validate Empirically Cognitive Processes in	
Software Assistance Contexts	59
Archaeological Data Sets Visualization Particularities.	63
Approach for Studies of Information Visualization Techniques in	
Archaeology	63
Conclusions.	66
5 Prior Empirical Results.	69
Introduction.	69
The Design of the Empirical Studies.	70
Empirical Studies	72
Tools for Archaeological Process Necessities: Results	72
Tools for Archaeological Interaction and Presentation	
Necessities: Results.	87
Conclusions.	106
 Part III Software Assistance Strategies for Archaeological Data	
6 Framework Overview	109
Introduction.	109
Modeling Software Assistance Strategies: Subject Matter, Cognitive	
Processes and Presentation and Interaction Mechanisms	110
The General Structure.	110
7 Archaeological Subject Matter	113
Conceptual Modeling for Archaeological Data Sets	113
CHARM (Cultural Heritage Abstract Reference Model)	113
The Characteristics of CHARM	114
CHARM's Extension Mechanisms	116
Other Structural Aspects in CHARM	118
Our Proposal: CHARM as the Basis for the Knowledge	
Generation.	120
The Use of the Package Mechanism.	121
The Use of the Cluster Mechanism.	121
Conclusions.	122
8 Cognitive Processes	123
Introduction.	123
Expressing Archaeological Cognitive Processes	123
Conclusions.	125
9 Presentation and Interaction Mechanisms	127
Introduction.	127
Formal Representation in Software Presentation and Interaction	
for Data Analysis	128

Some Challenges in Archaeological Data Analysis	130
Design Patterns for Archaeological Data Analysis	131
LEVEL 1: Data-Analysis Interaction Unit.	132
LEVEL 2: Structure IU.	133
LEVEL 2: Value-Combination IU	134
LEVEL 2: Conglomerate IU.	134
LEVEL 2: Trend IU	135
LEVEL 2: Timeline IU.	136
LEVEL 2: Geographic Area IU	136
LEVEL 2: Sequential IU.	137
LEVEL 3: Row Aggregation Pattern	137
LEVEL 3: Column Aggregation Pattern	138
LEVEL 3: Set Pattern.	138
LEVEL 3: Additional Information Pattern	138
LEVEL 3: First Focus Pattern.	139
LEVEL 3: Colour Assignment Pattern	139
LEVEL 3: Size Assignment Pattern	140
LEVEL 3: Scale Relation Pattern	140
LEVEL 3: Fuzzy Control Pattern	141
Applying Design Patterns in Archaeology.	143
Structure IU	144
Value-Combination IU	147
Conglomerate IU	151
Trend IU.	154
Timeline IU	157
Geographic Area IU	160
Sequential IU	162
Conclusions.	168
10 Integration, Interoperability and Consistency Between Framework Models	171
Introduction.	171
Existing Works on Expressing Connections Between Models.	172
Our Approach Based on Interoperability.	174
The Integration Metamodel.	177
Interoperability Guidelines	179
Conclusions.	181
Part IV Archaeological Applications in Practice	
11 Analytical Validation: A Romea as a Case Study	185
Introduction.	185
A Romea as a Case Study: A General Overview	186
Description of the Site and the Associated Archaeological Research	187

A Romea: Subject Model	190
A Romea: Cognitive Processes Model	203
A Romea: Presentation and Interaction Model	204
A Romea: Integration, Interoperability and Consistency Between Models	206
Obtaining Information on Integration	208
Implementing Interoperability	211
Conclusions.	213
12 Empirical Validation	215
Introduction.	215
Prototyping Process and Prototype Characteristics	216
A Romea Prototype Database Implementation	219
The Subject Model	224
Validation Methodology	237
The Validation Process	237
Conclusions.	286
Part V Final Considerations	
13 Discussion	293
Introduction.	293
Answering the Initial Questions	293
First Secondary Question: Archaeological Knowledge Generation Problems	294
Second Secondary Question: Archaeological Cognitive Processes.	295
Third Secondary Question: Information Visualization Techniques for Large Archaeological Data Sets	296
Final Discussion	296
A Critical Analysis	297
14 Conclusions	301
Summary.	301
Looking Beyond: The Future of Software-Assisted Knowledge Generation Based on Archaeological Data	303
References	307

Digging into Software Knowledge Generation in Cultural
Heritage

Modeling Assistance Strategies for Large
Archaeological Data Sets

Martin-Rodilla, P.

2018, XXI, 320 p. 135 illus., 91 illus. in color., Hardcover

ISBN: 978-3-319-69187-9
