

Contents

1 Organic Electronics in a Nutshell	1
1.1 Materials	1
1.2 Devices	4
1.3 Challenges	7
References	9
2 Particle-Based Models of Organic Semiconductors	13
2.1 The Bottom-Up Simulation Workflow	13
2.2 Molecular Landscapes	15
2.2.1 Density Functional Theory	16
2.2.2 Molecular Dynamics	19
2.2.3 Atomistic Models	22
2.2.4 Coarse-Grained Models	25
2.2.5 Lattice Models	27
2.3 Charge Transport Networks	29
2.3.1 Charge Transfer Reactions	29
2.3.2 Graph Generation and Parametrization	32
2.4 Charge-Carrier Dynamics and Mobility	36
References	37
3 Long-Range Polarized Embedding of Electronic Excitations	41
3.1 The Mesoscopic Interaction Range	41
3.2 The Molecular Field and Field Response	44
3.2.1 Distributed Multipoles	45
3.2.2 Distributed Polarizabilities	47
3.3 Long-Range Polarized Embedding	50
3.3.1 Polarization Energy and Work	50
3.3.2 Aperiodic-Periodic Decomposition	52
3.3.3 Shape Terms	55
3.4 Interaction Kernels	57

3.4.1	Anisotropic Kernels	57
3.4.2	Isotropic Kernels	58
3.4.3	Thole Damping Kernels	58
3.4.4	Field Calculation	59
3.5	Computational Procedure for Site-Energy Calculations	60
3.6	Summary: Long-Range Polarized Embedding	63
	References	64
4	Charge Carriers at Organic–Organic Interfaces	67
4.1	The Acceptor-Donor-Acceptor Puzzle	67
4.1.1	Level Profiles Across C ₆₀ /D5M Interfaces	70
4.1.2	Experimental Validation	72
4.2	Orientation Effects and Film Patterning	73
4.2.1	Orientation Effects in Lattice Multilayers	74
4.2.2	Level Profiles in Patterned Thin Films	75
4.3	Charge Carriers at Donor-Acceptor Heterojunctions	78
4.3.1	Interplay of Molecular Architecture, Packing and Orientation	79
4.3.2	The Charge-Density-Dependent Open-Circuit Voltage	84
4.4	Charge Carriers at Grain Boundaries	86
4.5	Summary: Interface Energetics	89
	References	90
5	Charge Carriers in Disordered Bulk Mesophases	93
5.1	Charge Carriers in Amorphous Dipolar Semiconductors	93
5.2	Charge Carriers in Polymeric Semiconductors	96
5.2.1	Partially Ordered Mesophases of Poly(3-Hexylthiophene)	96
5.2.2	Formation of Low-Energy States and Correlations	98
5.3	Summary: Mesophase Energetics	102
	References	103
6	Charge Transfer States at Donor–Acceptor Heterojunctions	105
6.1	Pathway for Charge Splitting and Detrapping	105
6.1.1	Dielectric Solvation of Electron-Hole Pairs	107
6.1.2	The Role of Interfacial Defects	110
6.1.3	Charge Push-Out Forces at Rough Interfaces	112
6.2	Interface Polarity Versus Photovoltaic Gap	116
6.3	Charge Transfer Energetics and Open-Circuit Voltage	118
6.4	Summary: Charge Transfer Energetics	122
	References	123
7	Conclusions and Outlook	127
	References	132

The (Non-)Local Density of States of Electronic
Excitations in Organic Semiconductors

Poelking, C.R.

2018, XIV, 133 p. 42 illus. in color., Hardcover

ISBN: 978-3-319-69598-3
