<b>1 Introduction</b> . . . . .	1
K. Muralidhar	
1.1 Physical Mechanisms . . . . .	2
1.2 Representative Elementary Volume . . . . .	2
1.3 Mathematical Modeling of Fluid Flow . . . . .	4
1.4 Darcy's Law . . . . .	6
1.5 Microscale Phenomena . . . . .	8
1.6 Applications . . . . .	8
1.7 Terminology . . . . .	9
1.8 Closure . . . . .	10
Bibliography . . . . .	11
<b>2 Equations Governing Flow and Transport in Porous Media</b> . . . . .	15
K. Muralidhar	
2.1 Darcy's Law . . . . .	15
2.1.1 Cartesian and Cylindrical Coordinate Systems . . . . .	18
2.1.2 Inhomogeneous Media . . . . .	19
2.1.3 Anisotropic Media . . . . .	20
2.1.4 Compressible Flow . . . . .	21
2.1.5 Effect of Gravity . . . . .	23
2.2 Brinkman-Corrected Darcy's Law . . . . .	23
2.3 Forchheimer-Extended Darcy's Law . . . . .	25
2.4 Non-darcy Model of Flow . . . . .	27
2.4.1 Non-dimensionalization . . . . .	30
2.4.2 Special Cases . . . . .	31
2.4.3 Compressible Flow . . . . .	32
2.4.4 Turbulent Flow . . . . .	33
2.5 Energy Equation . . . . .	35
2.5.1 Thermal Non-equilibrium Model . . . . .	39
2.5.2 Compressible Flow . . . . .	41

2.6	Unsaturated Porous Medium . . . . .	42
2.6.1	Oil–Water Flow . . . . .	45
2.6.2	Multiphase Multicomponent Flow . . . . .	49
2.7	Mass Transfer . . . . .	51
2.8	Combined Heat and Mass Transfer . . . . .	53
2.9	Flow, Heat, and Mass Transfer . . . . .	55
2.10	Nanoscale Porous Media . . . . .	57
2.11	Multiscale Porous Media . . . . .	58
2.12	Closure . . . . .	59
	References . . . . .	60
<b>3</b>	<b>Mesoscale Interactions of Transport Phenomena in Polymer Electrolyte Fuel Cells . . . . .</b>	<b>65</b>
	Partha P. Mukherjee, Ankit Verma, and Aashutosh Mistry	
3.1	Introduction . . . . .	65
3.2	Description of Charge Transport in Porous Media . . . . .	68
3.2.1	Special Considerations . . . . .	71
3.3	Mesoscale Models in Porous Media . . . . .	72
3.4	Microstructure Generation . . . . .	73
3.5	Lattice Boltzmann Modeling . . . . .	73
3.5.1	Methodology . . . . .	76
3.5.2	Representative Highlights . . . . .	78
3.6	Electrochemistry-Coupled Direct Numerical Simulation . . . . .	81
3.6.1	Methodology . . . . .	83
3.6.2	Representative Results . . . . .	84
3.7	Summary and Outlook . . . . .	89
	References . . . . .	90
<b>4</b>	<b>Porous Media Applications: Electrochemical Systems . . . . .</b>	<b>93</b>
	Partha P. Mukherjee, Aashutosh Mistry, and Ankit Verma	
4.1	Introduction . . . . .	93
4.2	Thermodynamic, Kinetic, and Transport Behavior of Li-Ion Battery Materials . . . . .	95
4.2.1	Open Circuit Potential . . . . .	96
4.2.2	Entropic Coefficient . . . . .	96
4.2.3	Cell Capacity and C-Rate . . . . .	98
4.2.4	Intercalation Kinetics . . . . .	100
4.2.5	Electrolyte Transport Properties . . . . .	100
4.3	Modeling Isothermal Operation of a Li-Ion Cell . . . . .	102
4.3.1	Macrohomogeneous Description . . . . .	104
4.3.2	Comments on Mathematical Nature of Governing Equations and Solution . . . . .	105
4.3.3	Results and Discussion . . . . .	107

4.4	Importance of Thermal Effects and Its Influence on Electrochemical Operation . . . . .	112
4.4.1	Energy Equation to Define Temperature Changes . . . . .	113
4.4.2	Results and Discussion . . . . .	115
4.5	Direct Numerical Simulation . . . . .	115
4.5.1	Governing Equations . . . . .	117
4.5.2	Microstructural Effects: Properties for Composite Electrodes . . . . .	118
4.6	Summary and Outlook . . . . .	121
	References . . . . .	121
<b>5</b>	<b>Porous Media Applications: Biological Systems</b> . . . . .	<b>123</b>
	Malay K. Das and Chandan Paul	
5.1	Introduction . . . . .	123
5.1.1	Aneurysm and the Treatment Options . . . . .	123
5.1.2	Blood Flow in Coil-Embolized Aneurysm: Role of Modeling and Simulation . . . . .	124
5.2	Analytical Solutions of Flow in a Channel and a Tube . . . . .	125
5.2.1	Pulsatile Flow Through a Tube with Clear Media . . . . .	125
5.2.2	Steady Flow Through a Channel Filled with Porous Media . . . . .	127
5.2.3	Steady Flow Through a Tube Filled with Porous Media . . . . .	127
5.2.4	Pulsatile Flow Through a Channel Filled with Porous Media . . . . .	128
5.2.5	Pulsatile Flow Through a Tube Filled with Porous Media . . . . .	129
5.3	Pulsatile Flow in a Porous Bulge . . . . .	130
5.3.1	Governing Equations . . . . .	131
5.3.2	Flow Parameters . . . . .	132
5.3.3	Pulsatile Flow in a Porous Bulge: Numerical Solution . . . . .	134
5.3.4	Validation of the Finite Volume Solver . . . . .	134
5.3.5	Pulsatile Flow in a Bulge . . . . .	139
5.3.6	Pulsatile Flow in a Patient-Specific Geometry . . . . .	144
5.4	Rheology of Biological Fluids . . . . .	147
5.4.1	Role of RBC in Blood Rheology . . . . .	148
5.4.2	Realistic Blood Model . . . . .	149
5.5	Closure . . . . .	150
	References . . . . .	151

<b>6</b>	<b>Oscillatory Flow in a Mesh-Type Regenerator</b> . . . . .	155
	K. Muralidhar	
6.1	Introduction . . . . .	156
	6.1.1 Stirling Refrigerator . . . . .	156
	6.1.2 Regenerator . . . . .	159
6.2	Thermodynamic and Transport Models . . . . .	160
6.3	Transport Modeling of a Mesh-Type Regenerator . . . . .	161
	6.3.1 Thermal Non-Equilibrium . . . . .	162
6.4	Non-Darcy Thermal Nonequilibrium Model . . . . .	163
	6.4.1 Flow Equations in One-Dimensional Unsteady Form . . . . .	165
	6.4.2 Specification of Model Parameters . . . . .	168
	6.4.3 Time Constant . . . . .	172
	6.4.4 Harmonic Analysis . . . . .	173
	6.4.5 Numerical Solution of the Energy Equation . . . . .	177
6.5	Results and Discussion . . . . .	178
	6.5.1 Flow Behavior . . . . .	179
	6.5.2 Thermal Performance . . . . .	186
	6.5.3 Dynamic Steady State . . . . .	186
	6.5.4 Heat Losses . . . . .	191
	6.5.5 Coarse Mesh . . . . .	192
	6.5.6 Transient Response . . . . .	193
6.6	Conclusions . . . . .	196
	References . . . . .	197
<b>7</b>	<b>Geological Systems, Methane Recovery, and CO<sub>2</sub> Sequestration</b> . . . . .	201
	Malay K. Das and Abhishek Khetan	
7.1	Introduction . . . . .	201
	7.1.1 Gas Hydrate as an Energy Resource . . . . .	202
	7.1.2 Environmental Concerns and CO <sub>2</sub> Sequestration . . . . .	203
	7.1.3 Nature of Marine Hydrate Reservoirs and CH <sub>4</sub> Recovery . . . . .	204
	7.1.4 Role of Modeling and Simulation . . . . .	205
7.2	Mathematical Modeling . . . . .	206
	7.2.1 Single-Phase Model . . . . .	206
	7.2.2 Governing Equations . . . . .	207
	7.2.3 Constitutive Relations . . . . .	209
	7.2.4 Initial and Boundary Conditions . . . . .	210
7.3	Two-Phase Model . . . . .	211
	7.3.1 Governing Equations . . . . .	211
	7.3.2 Equilibrium Data for Hydrate Stability . . . . .	214
	7.3.3 Porosity and Absolute Permeability . . . . .	214
	7.3.4 Relative Permeability and Capillary Pressure . . . . .	215
	7.3.5 Gas Phase Viscosity . . . . .	215
	7.3.6 Specific Heat Capacities . . . . .	216

- 7.3.7 Heat of Hydrate Formation . . . . . 216
- 7.3.8 Equivalent Thermal Conductivity . . . . . 217
- 7.3.9 Initial and Boundary Conditions . . . . . 217
- 7.4 Results and Discussion . . . . . 218
  - 7.4.1 Evolution of Pressure and Temperature Profiles . . . . . 218
  - 7.4.2 Sensitivity Analysis . . . . . 222
  - 7.4.3 Multiphase Simulation . . . . . 222
  - 7.4.4 Evolution of Pressure and Temperature Profiles . . . . . 223
  - 7.4.5 Sensitivity Analysis: Thermal Conductivity . . . . . 228
  - 7.4.6 Sensitivity Analysis: Medium Porosity . . . . . 230
- 7.5 Closure . . . . . 233
