Contents

1 Introduction 1
1.1 Background 1
1.2 Challenges of the Voltage Control in the Danish System 4
1.2.1 Reactive Power Reserve 4
1.2.2 Coordinated Voltage Control 5
1.2.3 Effective and Efficient Adjustments 5
1.3 Motivation 6
1.4 Project Objectives 9
1.5 Thesis Outline 10
References 11

2 Load Flow Calculation 13
2.1 Load Flow Analysis 13
2.2 Newton-Raphson Method 16
2.2.1 Load Flow with Newton-Raphson Method 17
2.3 Holomorphic Embedding Load Flow Method 22
2.3.1 The HELM Concept 22
2.3.2 Padé Approximantion 24
2.3.3 Continued Fraction 25
2.3.4 Load Flow Solution with HELM 27
2.3.5 HELM Calculation Procedure 31
2.3.6 Case Studies with HELM 36
2.4 Summary 39
References 40

3 Numerical Optimization 41
3.1 Nonlinear Programming 41
3.1.1 Optimality Conditions 42
3.1.2 Prime-Dual Interior Point Method 42
3.1.3 Trust Region Method 45

3.2 Artificial Intellegent Method 48
3.3 Summary 48
References 49

4 Danish AVC System 51
4.1 State-of-the-Art 51
4.1.1 Hierarchical Control 51
4.1.2 Centralized Control 53
4.1.3 Summary of the Review 53
4.1.4 Existing Product for the Danish AVC System 57
4.1.5 The Expected Danish AVC System 62
4.2 Reactive Power Components 65
4.2.1 Synchronous Generator 65
4.2.2 Passive Shunt Compensator 67
4.2.3 Power Electronic Device-Based Compensator 69
4.2.4 Transformer Tap Changer 72
4.2.5 Summary 72
4.3 The Optimization Framework of the Danish AVC System 73
4.3.1 Objective 73
4.3.2 Constraints 76
4.3.3 Discretization 78
4.4 Multi-stage Optimization 81
4.4.1 Motivation 82
4.4.2 Multi-stage Optimization Problem Formulation 83
4.4.3 Recursive Formulation 88
4.4.4 Rolling Process 90
4.5 The Danish Wind Power Forecasting System 93
4.6 Robustness Improvement of the Multi-stage Optimization Framework 99
4.6.1 Linear Estimation 100
4.6.2 Scenario-Based Method 101
4.6.3 Voltage Security Margin 108
4.7 Monte Carlo Simulations—Normal to Anything 111
4.8 Summary 112
References 113

5 Implementation 117
5.1 Data Source 117
5.2 Data Structure 120
5.3 Pre-processing 120
5.3.1 Brainy's Tree Sorting Method 121
5.3.2 Zero Impedance Branch 121
5.3.3 Network Reduction 122

5.4 Decision Variable Definition . . . 125
5.5 Sequential Update . . . 129
5.6 Programming . . . 130
5.6.1 The Continuous Optimization . . . 130
5.6.2 Discretization . . . 135
5.6.3 Finite Difference . . . 138
5.6.4 Integration to the Forecasting System . . . 138
5.7 Example . . . 139
5.7.1 Simulation Results . . . 142
5.8 Summary . . . 150
References . . . 151

6 Case Studies . . . 153
6.1 Simulation Setup . . . 154
6.2 Loss Minimization . . . 159
6.3 Cost Minimization . . . 164
6.4 MORPF for the Cost Minimization . . . 168
6.5 MORPF Employing Large Wind Farms . . . 172
6.6 MORPF with Voltage Security Margin . . . 181
6.7 Results Summary . . . 187
6.8 Extreme Case . . . 189
6.9 Summary . . . 191
References . . . 192

7 Fallback Scheme . . . 193
7.1 Fallback Controller . . . 194
7.2 Grid Decomposition for the Fallback Controllers . . . 198
7.3 Case Study . . . 201
7.4 Summary . . . 206
References . . . 206

8 Conclusions . . . 207
8.1 Answer to the Objectives . . . 207
8.2 The Contributions . . . 212
8.3 The Future Work . . . 215

About the Author . . . 217

Appendix A: Voltage Control by Tap Ratio in Helm . . . 219

Appendix B: Derivative . . . 223

Appendix C: Dataset . . . 231

Appendix D: Report . . . 235

Appendix E: Shunt controllers in DK1 . . . 237
