

# Contents

<b>1</b>	<b>The Schrödinger Equation</b>	<b>1</b>
1.1	The History of Quantum Mechanics in Small Bits	1
1.2	Planck Versus the Ultraviolet Catastrophe	4
1.2.1	Rayleigh–Jeans Theory	4
1.2.2	Planck Theory	6
1.3	An Intuitive Approach to the Schrödinger Equation	7
1.4	The Feynman Approach	10
1.5	The Schrödinger Equation	12
1.6	Relations Between Position and Momentum Wavefunctions	16
1.6.1	Calculating Expectations	17
1.7	Heisenberg Uncertainty Principle	18
1.8	Observable and its Time Evolution	19
1.8.1	The Ehrenfest Theorem	21
1.9	Charge Density and Interatomic Potentials: The Hellmann–Feynman Theorem	22
1.10	The Pauli Exclusion Principle	24
1.11	On the Numerical Solution of the Schrödinger Equation	25
	References	27
<b>2</b>	<b>Ab-Initio Calculations</b>	<b>29</b>
2.1	The Hartree–Fock Description	29
2.1.1	The Orbital Model	29
2.1.2	Accounting for the Pauli Exclusion Principle	30
2.1.3	The Variational Principle	31
2.1.4	A Direct Solution Procedure	32
2.1.5	The Hartree–Fock Approach	33
2.1.6	Post-Hartree–Fock Methods	34
2.2	Density Functional Theory	35
2.2.1	The First Hohenberg and Kohn Theorem	35
2.2.2	The Second Hohenberg and Kohn Theorem	37

2.2.3	The Hohn–Sham Equations . . . . .	37
2.3	Concluding Remarks on the Quantum Scale . . . . .	39
	References . . . . .	39
<b>3</b>	<b>Coarse-Grained Descriptions . . . . .</b>	<b>41</b>
3.1	Molecular Dynamics . . . . .	41
3.1.1	Some Simple Examples of Pair-Wise Interatomic Potentials . . . . .	42
3.1.2	Integration Procedure . . . . .	43
3.1.3	Discussion . . . . .	44
3.1.4	Recovering Macroscopic Behaviors . . . . .	46
3.1.5	Molecular Dynamics-Continuum Mechanics Bridging Techniques . . . . .	51
3.1.6	Coarse-Grained Molecular Dynamics: DPD and MPCD . . . . .	52
3.2	Brownian Dynamics: A Step Towards Coarse-Grained Models . . . . .	55
3.2.1	The Langevin Equation . . . . .	56
3.2.2	From Diffusion to Anomalous Diffusion . . . . .	58
	References . . . . .	67
<b>4</b>	<b>Kinetic Theory Models . . . . .</b>	<b>69</b>
4.1	Motivation . . . . .	69
4.2	Kinetic Theory Description of Simple Liquids and Gases . . . . .	70
4.2.1	Hydrodynamic Equations . . . . .	72
4.2.2	The Lattice Boltzmann Method – LBM . . . . .	75
4.3	Kinetic Theory Description of Some Complex Fluids . . . . .	77
4.3.1	Dilute Suspensions of Non-Brownian Rods . . . . .	78
4.3.2	On the Solution of the Fokker–Planck Equation . . . . .	85
4.3.3	Dilute Suspensions of Brownian Rods . . . . .	88
4.3.4	Rigid Clusters Composed of Rigid Rods . . . . .	96
4.3.5	Extensible Rods . . . . .	100
4.3.6	Dilute Polymers Solutions . . . . .	103
4.3.7	Polymer Melts . . . . .	109
4.3.8	Liquid Crystalline Polymers . . . . .	111
4.3.9	Carbon-Nanotube Suspensions: Introducing Aggregation Effects . . . . .	113
4.3.10	Kinetic Theory Approach to the Micro Structural Theory of Passive Mixing . . . . .	115
4.4	The Chemical Master Equation . . . . .	119
4.4.1	Moment Based Descriptions . . . . .	121
4.4.2	From the Chemical Master Equation to Moment-Based Descriptions . . . . .	122
	References . . . . .	124

A Journey Around the Different Scales Involved in the  
Description of Matter and Complex Systems

A Brief Overview with Special Emphasis on Kinetic  
Theory Approaches

Chinesta, F.; Abisset-Chavanne, E.

2018, X, 125 p. 16 illus., Softcover
