1	Introduction	1
	References	5
2	Background	7
2.1	2D Materials	7
2.1.1	Graphene	7
2.1.2	Hexagonal Boron Nitride (h-BN)	9
2.1.3	Molybdenum Disulphide MoS ₂	11
2.1.4	Optical Visibility of 2D Materials	12
2.2	Nanoelectromechanical Systems (NEMS) from Graphene and Other 2D Materials	14
2.2.1	Electrostatic Actuation of Graphene Resonator Devices	15
2.2.2	Damping Mechanisms Present in 2D NEMS	17
2.2.3	Beam-Membrane Mechanical Transition in 2D Materials	19
2.2.4	Characterisation of NEMS Based on 2D Materials	20
2.3	Investigating Sample Electrical and Mechanical Properties with SPM	23
2.3.1	Cantilever Dynamics	23
2.3.2	Mechanical Techniques	24
2.3.3	Electrical Techniques	26
2.3.4	Time-Resolved Techniques	30
	References	33
3	Materials and Methods	37
3.1	2D Materials Preparation	37
3.1.1	Substrate Preparation and Interaction	37
3.1.2	Building Heterostructures; An All-Dry Transfer of 2D Materials	37

3.1.3	Sample Degradation and Oxidation	39
3.2	Scanning Probe Methods	41
3.2.1	Sample Vibration	41
3.2.2	Tip Vibration	41
3.2.3	Electrostatic/Heterodyne Force Microscopy (HFM)	42
	References	43
4	Morphology of 2D Materials and Their Heterostructures	45
4.1	Graphene on Hexagonal Boron Nitride	45
4.2	Graphene on Hexagonal Boron Nitride: Moirè Pattern	46
4.3	Summary	51
	References	51
5	Nanomechanical Phenomena	53
5.1	Subsurface Imaging in 2D Materials with Ultrasonic Force Microscopy	53
5.1.1	Theoretical Interpretation: Sample Anisotropy	54
5.1.2	Observing Subsurface Structure in 2D Materials	58
5.2	Mechanical Properties of Graphene Grown on 4H-SiC; Effects of Hydrogen Intercalation	62
5.2.1	Stiffness Measurements of Graphene on 4H-SiC	64
5.2.2	Trapped Pockets of Hydrogen Beneath SiC	69
5.2.3	Triangular Indentations	72
5.3	Summary	75
	References	76
6	Nanoelectromechanical Phenomena	79
6.1	Imaging NEMS Like Devices with Direct Contact Electrostatic Force Microscopy	79
6.1.1	Contrast Mechanism	79
6.1.2	Detecting Subsurface Charge Density Beneath Graphene	83
6.1.3	The Effect of Environmental Factors on the Operation of DC-EFM	85
6.2	Electrostatic Heterodyne Force Microscopy (E-HFM)	86
6.3	Differential Interferometry of Graphene Resonators	91
6.4	Summary	98
	References	98
7	Further Work and Future Directions	101
7.1	Interaction of 2D Materials with Surface Acoustic Waves	101
7.1.1	Bilayer h-BN Resonators, Interaction with Surface Acoustic Waves and Flexoelectricity	103
7.2	High-Frequency Electrostatic Heterodyne Force Microscopy	105
	References	106

Contents	xvii
8 Conclusion	107
Appendix A: Materials and Methods	111
Appendix B: Nanomechanical Phenomena in 2D Materials	113
Appendix C: Nanoelectromechanical Phenomena	117
Curriculum Vitae	119

Nanomechanical and Nanoelectromechanical
Phenomena in 2D Atomic Crystals

A Scanning Probe Microscopy Approach

Kay, N.D.

2018, XXI, 122 p. 67 illus., 14 illus. in color., Hardcover

ISBN: 978-3-319-70180-6
