

Contents

- Introduction 1**
- 1 Elements of solid mechanics 5**
 - 1.1 Stress 5
 - 1.1.1 Stress vector 5
 - 1.1.2 Stress tensor 7
 - 1.1.3 Equilibrium conditions 10
 - 1.2 Deformation and strain 11
 - 1.2.1 Strain tensor 11
 - 1.2.2 Strain rate 13
 - 1.3 Constitutive laws 14
 - 1.3.1 Elasticity 15
 - 1.3.2 Viscoelasticity 19
 - 1.3.3 Plasticity 22
 - 1.4 Energy principles 27
 - 1.4.1 Energy balance 27
 - 1.4.2 Principle of virtual work 28
 - 1.4.3 Theorems of Clapeyron and Betti 30
 - 1.5 Plane problems 31
 - 1.5.1 Plane stress, plane strain, longitudinal shear 31
 - 1.5.2 Linear elasticity, complex method 33
 - 1.5.3 Perfectly plastic material, slip-line fields 36
 - 1.6 Problems 38
 - 1.7 Further reading 41
- 2 Classical fracture and failure hypotheses 43**
 - 2.1 Basic concepts 43
 - 2.2 Failure hypotheses 45
 - 2.2.1 Principal stress hypothesis 45
 - 2.2.2 Principal strain hypothesis 46
 - 2.2.3 Strain energy hypothesis 46

2.2.4	Coulomb-Mohr hypothesis	47
2.2.5	Drucker-Prager hypothesis	50
2.2.6	Johnson-Cook criterion	51
2.3	Deformation behavior during failure	52
2.4	Problems	53
2.5	Further reading	54
3	Micro and macro phenomena of fracture	55
3.1	Microscopic aspects	55
3.1.1	Surface energy, theoretical strength	55
3.1.2	Microstructure and defects	57
3.1.3	Crack formation	60
3.1.4	Percolation	61
3.2	Macroscopic aspects	63
3.2.1	Crack growth	63
3.2.2	Types of fracture	64
3.3	Further reading	65
4	Linear fracture mechanics	67
4.1	General remarks	67
4.2	Crack-tip field	68
4.2.1	Two-dimensional crack-tip fields	68
4.2.2	Mode-I crack-tip field	74
4.2.3	Three-dimensional crack-tip field	75
4.3	K -concept	76
4.4	K -factors	77
4.4.1	Examples	78
4.4.2	Integral equation formulation	84
4.4.3	Method of weight functions	87
4.4.4	Crack interaction	90
4.4.5	Stress intensity factors and stress concentration factors	95
4.4.6	Numerical determination of K -factors	98
4.5	Fracture toughness K_{Ic}	100
4.6	Energy balance	101
4.6.1	Energy release during crack propagation	101
4.6.2	Energy release rate	103
4.6.3	Compliance, energy release rate, and K -factors	106
4.6.4	Energy balance, Griffith's fracture criterion	108
4.6.5	Numerical determination of energy release rate	114
4.6.6	J -integral	115
4.7	Small-scale yielding	121
4.7.1	Plastic zone size, Irwin's crack length correction	121
4.7.2	Qualitative remarks on the plastic zone	123
4.8	Stable crack growth	125
4.9	Mixed-mode loading	128

4.10	Crack initiation at cavities and notches, hybrid criterion	133
4.11	Fatigue crack growth	136
4.12	Interface cracks	138
4.13	Anisotropic materials	146
4.14	Piezoelectric materials	149
4.14.1	Basic principles	149
4.14.2	The crack in a ferroelectric material	151
4.15	Problems	154
4.16	Further reading	156
5	Elastic-plastic fracture mechanics	159
5.1	Introduction	159
5.2	Dugdale model	160
5.3	Cohesive zone models	164
5.4	Crack-tip field	167
5.4.1	Perfectly plastic material	167
5.4.2	Total strain theory, HRR—field	173
5.5	Fracture criterion	178
5.6	Determination of J	180
5.7	Determination of J_c	181
5.8	Crack propagation	185
5.8.1	J -controlled crack growth	185
5.8.2	Stable crack growth	187
5.8.3	Steady-state crack growth	189
5.9	Essential work of fracture	195
5.10	Problems	197
5.11	Further reading	198
6	Creep fracture	199
6.1	Introduction	199
6.2	Fracture of linear viscoelastic materials	200
6.2.1	Crack-tip field, elastic-viscoelastic analogy	200
6.2.2	Fracture concept	202
6.2.3	Crack propagation	204
6.3	Creep fracture of nonlinear materials	208
6.3.1	Secondary creep, constitutive law	208
6.3.2	Stationary crack, crack-tip field, loading parameters	209
6.3.3	Creep crack growth	213
6.4	Further reading	218
7	Dynamic fracture mechanics	221
7.1	Introduction	221
7.2	Some foundations of elastodynamics	222
7.3	Dynamic loading of a stationary crack	223
7.3.1	Crack-tip field, K -concept	223

7.3.2	Energy release rate, energetic fracture criterion	224
7.3.3	Examples	225
7.4	Crack propagation	228
7.4.1	Crack-tip field	228
7.4.2	Energy release rate	231
7.4.3	Fracture concept, crack-tip speed, crack branching, crack arrest	234
7.4.4	Examples	237
7.5	Fragmentation	241
7.6	Further reading	242
8	Micromechanics and homogenization	243
8.1	Introduction	243
8.2	Selected defects and fundamental solutions	245
8.2.1	Eigenstrain	245
8.2.2	Inhomogeneities	254
8.3	Effective elastic properties	259
8.3.1	Foundations	259
8.3.2	Analytical approximations	271
8.3.3	Energy methods and bounds	290
8.4	Homogenization of elastic-plastic materials	297
8.4.1	Foundations	297
8.4.2	Approximations	306
8.5	Numerical homogenization	311
8.6	Thermoelastic material	314
8.7	Problems	316
8.8	Further reading	318
9	Damage mechanics	321
9.1	Introduction	321
9.2	Foundations	322
9.3	Brittle damage	324
9.4	Ductile damage	327
9.4.1	Void growth	327
9.4.2	Damage models	330
9.4.3	Fracture concept	332
9.5	Material softening and strain localization	332
9.6	Nonlocal regularization of damage models	336
9.7	Further reading	341
10	Probabilistic fracture mechanics	343
10.1	Introduction	343
10.2	Foundations	344
10.3	Statistical fracture concept of Weibull	346
10.3.1	Fracture probability	346

10.3.2 Fracture stress	349
10.3.3 Generalizations	350
10.4 Probabilistic fracture mechanical analysis	351
10.5 Further reading	352
Index	355

Fracture Mechanics

With an Introduction to Micromechanics

Gross, D.; Seelig, Th.

2018, XV, 358 p. 208 illus., Hardcover

ISBN: 978-3-319-71089-1
