

Table of Contents

Preface	vii
Acknowledgement	xi
Table of Contents	xiii
 Part I. Geometric Topics	
Chapter 1. Area and Dissection	3
Section 1. Qualitative and Quantitative Treatments of Area	3
Section 2. The Bolyai-Gerwin Theorem and Pythagoras' Theorem	11
Section 3. Dissection Problems	16
Chapter 2. Projective Geometry	29
Section 1. Synthetic Approach	29
Section 2. Metric Approach	37
Section 3. Analytic Approach	44
Chapter 3. Conic Sections	55
Section 1. Loci	55
Section 2. The Parabola	60
Section 3. Ellipses and Hyperbolas	66
Chapter 4. Inversive Geometry	79
Section 1. Inversion	79
Section 2. Applications to Euclidean Geometry	84
Section 3. Mohr-Mascheroni Constructions	95
Chapter 5. Convexity	105
Section 1. Figures	105
Section 2. Convex Figures	114
Section 3. Figures of Constant Width	123

Part II. Other Topics

Chapter 6.	Balancing Problems	137
Section 1.	Identifying Fake Coins	137
Section 2.	Other Problems	144
Section 3.	Other Balances	151
Chapter 7.	Graph Theory	159
Section 1.	Basic Concepts	159
Section 2.	Trees	169
Section 3.	Directed Graphs	177
Chapter 8.	Beanstalks	187
Section 1.	Red and Blue Beanstalks	187
Section 2.	Infinite Beanstalks	193
Section 3.	Beansprouts	197
Chapter 9.	Inequalities	207
Section 1.	The Rearrangement Inequality	207
Section 2.	The Majorization Inequality	214
Section 3.	Trigonometric Inequalities	222
Chapter 10.	Polynomial Equations	233
Section 1.	Complex Numbers	233
Section 2.	Cubic Equations	238
Section 3.	Quartic Equations	241
