

Contents

1	Introduction	1
	References	4
2	Importance of Energy Prevision Accuracy for Zero-Energy Buildings	7
2.1	Introduction	7
2.2	User-Building Interaction	8
2.3	Surveys on NZEB Performance	9
2.4	Simulations' Results	10
	References	10
3	Occupants' Behaviours Impact on Indoor Environment	13
3.1	Introduction	13
3.2	Evaluation of Users' Perturbations	13
3.3	Dependence on Building Usage Typology	15
	References	17
4	Triggers for Users' Behaviours	19
4.1	Introduction	19
4.2	Objective Factors	20
4.3	Personal Features	23
	References	25
5	Occupants' Adaptive Actions	31
5.1	Introduction	31
5.2	Window Opening and Closing	32
5.3	Light-Switching	34
5.4	Shadings and Blinds	36
5.5	Thermostat and Air-Conditioning Use	38

5.6	Fans and Doors	40
5.7	Actions' Priority	41
	References	42
6	Experimental Data Acquisition	47
6.1	Introduction	47
6.2	Occupancy Data	47
6.3	Environmental and Behavioural Data	50
	References	57
7	Modelling, Implementation and Validation Approaches	63
7.1	Introduction	63
7.2	Behavioural Modelling Approaches	64
7.3	The Mathematical Form	67
7.4	Advanced Stochastic Modelling: Agent-Based Models	69
7.5	Approaches to Model Occupancy Patterns	70
7.6	Implementing Behavioural Models in BEPS	71
7.7	Behavioural Models Evaluation and Validation	72
	References	73
8	Conclusions and Future Challenges	79
8.1	Main Conclusions	79
8.2	Future Challenges and Open Issues	81
	References	82
	Appendix A: Experimental Cases Study	83
	Appendix B: Examples of Applications	93

Impact of Occupants' Behaviour on Zero-Energy
Buildings

Stazi, F.; Naspi, F.

2018, VII, 95 p. 30 illus., 16 illus. in color., Softcover

ISBN: 978-3-319-71866-8
