

Content

1.	Motivation and problem context.....	1
1.1.	Research questions	2
1.2.	Scientific and practical relevance	3
1.3.	Research Design and Scope	4
A	CONTEXTUAL OUTLINE	9
2.	Freight transport in Germany by volume.....	9
3.	Freight transport in Germany as a general system	13
4.	Freight transport in Germany as an economic market	14
4.1.	Freight transport demand and supply interactions.....	18
4.2.	Structural framework.....	19
4.3.	Synopsis	24
4.4.	Specific statistical data.....	27
B	FREIGHT TRANSPORT MODELLING	37
5.	General types of freight transport models	38
6.	An overview on freight modelling techniques.....	40
6.1.	The four stage transport modelling concept.....	40
6.2.	Transport trip generation models.....	41
6.3.	Trip distribution models.....	47
6.4.	Modal split models	52
6.5.	Assignment models	55
6.6.	Résumé on the four stage transport modelling procedure	56
7.	Present modelling approaches.....	57
7.1.	Characteristics of disaggregate national freight transport models	58
7.2.	Characteristics of aggregate national freight transport models.	67
7.3.	Conclusion	73
C	FRAMEWORK FOR A DISAGGREGATE GERMAN FREIGHT TRANSPORT MODEL.....	75
8.	The Freight generation module.....	76
9.	The freight distribution module	76
9.1.	Supply chain synthesis	77
9.2.	Allocation of supplier-consumer pairings	78
9.3.	Shipment size determination	81

10. Combined modal split and network assignment model.....	82
11. Model structure overview	84
D REALISATION OF THE DISAGGREGATE GERMAN FREIGHT TRANSPORT MODEL	87
12. Modelling freight generation	87
12.1. Input data selection	87
12.2. Firm generation	89
12.3. Sectoral output generation	99
12.4. Firm-specific output allocation	106
13. Modelling freight distribution	108
13.1. Firm-specific supply chain synthesis evaluation criteria	108
13.2. Supplier pre-selection by sectoral economic relationships.....	111
13.3. Synthetic supply chain elements	115
13.4. Designation of synthetic supply chain elements to network nodes	127
13.5. Validation of allocated sectoral input and output volumes.....	129
13.6. Final supplier selection by performance evaluation	132
13.7. Completion by a shipment sizing	139
14. Modelling the freight network.....	146
14.1. Network link transport cost evaluation principles	152
14.2. Road freight transport link costs	155
14.3. Rail freight transport link costs	175
14.4. IWW freight transport link cost.....	205
15. Combined modal split and network assignment module	225
15.1. Transport flow estimation	227
15.2. Formalisation of the transport flow estimation	236
15.3. Execution within the overall model's context	243
15.4. Calibration.....	246
E RÉSUMÉ.....	251
16. Interpretation of the model.....	251
16.1. Strategies for future developments	252
16.2. Usefulness of the overall results.....	257
16.3. Summary and Conclusion	269
F BIBLIOGRAPHY	273
G APPENDIX.....	303

A Disaggregate Freight Transport Model for Germany
Reiche, S.

2018, XXV, 375 p. 34 illus., 3 illus. in color., Softcover
ISBN: 978-3-658-19152-8
