
Contents

1	Overview	1
1.1	The Challenge	1
1.2	Historical Developments	1
1.3	Challenge of Flying to Space	2
1.3.1	Vehicle-Integrated Rocket Propulsion	3
1.3.2	Vehicle-Integrated Airbreathing Propulsion	3
1.3.3	Choice of Propulsion System: A Multi-disciplinary Challenge	3
1.4	Operational Requirements	4
1.5	Operational Space Distances, Speed, and Times	6
1.6	Implied Propulsion Performance	9
1.7	Propulsion Concepts Available for Solar System Exploration	13
	Bibliography	17
2	Our Progress Appears to Be Impeded	19
2.1	Meeting the Challenge	19
2.2	Early Progress in Space	19
2.3	Historical Analog	22
2.4	Evolution of Space Launchers from Ballistic Missiles	24
2.5	Conflicts Between Expendable Rockets and Reusable Airbreathers	29
2.6	Commercialization and Exploration Road Map	34
2.6.1	Commercial Near-Earth Launchers Enable the First Step	34
2.6.2	On-Orbit Operations in Near-Earth Orbit Enable the Second Step	38
2.6.3	Earth-Moon System Enables the Third Step	38
2.6.4	Nuclear or High-Energy Space Propulsion Enables the Fourth Step	39
2.6.5	Very High-Energy Space Propulsion Enables the Fifth Step	39
2.6.6	Light Speed-Plus Propulsion Enables the Sixth Step	39
	Bibliography	40
3	Commercial Near-Earth Space Launcher: Understanding System Integration	43
3.1	Missions and Geographical Considerations	45
3.2	Energy, Propellants, and Propulsion Requirements	46
3.3	Energy Requirements to Change Orbital Altitude	48
3.4	Operational Concepts Anticipated for Future Missions	50
3.5	Configuration Concepts	51
3.6	Takeoff and Landing Mode	60
3.7	Transatmospheric Launcher Sizing	62
3.7.1	Vehicle Design Rationale	62
3.7.2	Vehicle Sizing Approach	63
3.7.3	Propulsion Systems	72

3.7.4	Sizing Methodology and Software Implementation	81
3.8	Available Solution Spaces: Examples	105
3.8.1	Single-Stage-to-Orbit (SSTO) Solution Space	105
3.8.2	Transatmospheric Space Launcher: Lessons Learned.	109
3.9	Hypersonic Configurations: Geometric Characteristics	110
3.9.1	Configuration Continuum	110
3.9.2	Configuration Geometry Properties.	114
	Bibliography	118
4	Commercial Near-Earth Launcher: Propulsion Choices	123
4.1	Propulsion System Alternatives	124
4.2	Propulsion System Characteristics.	125
4.3	Airflow Energy Entering the Engine	125
4.4	Internal Flow Energy Losses	128
4.5	Spectrum of Airbreathing Operation	132
4.6	Design Space Available—Interaction of Propulsion and Materials/Structures	134
4.7	Major Sequence of Propulsion Cycles	137
4.8	Rocket-Derived Propulsion	141
4.9	Airbreathing Rocket Propulsion	143
4.10	Thermally Integrated Combined-Cycle Propulsion	145
4.11	Engine Thermal Integration	147
4.12	Total System Thermal Integration.	148
4.13	Thermally Integrated Enriched Air Combined-Cycle Propulsion	152
4.14	Comparison of Continuous Operation Cycles	153
4.15	Conclusions with Respect to Continuous Operation Cycles	158
4.16	Pulse Detonation Engines	159
4.16.1	Engine Description.	159
4.16.2	Engine Performance	160
4.17	Conclusions with Respect to Pulse Detonation Cycles.	162
4.18	Comparison of Continuous Operation and Pulsed Cycles.	163
4.19	Integrated Launcher Sizing with Different Propulsion Systems	166
4.20	Structural Concept and Structural Index	168
4.21	Sizing Results for Continuous and Pulse Detonation Engines.	169
4.22	Operational Configuration Concepts: SSTO and TSTO	172
4.23	Emerging Propulsion System Concepts in Development	176
4.23.1	MagnetoHydroDynamic (MHD) Energy Bypass System	177
4.23.2	Electromagnetic Radiation Propulsion.	181
4.23.3	Variable Cycle Turboramjet.	182
4.23.4	Aero-Spike Nozzle	183
4.23.5	ORBITEC Vortex Rocket Engine.	183
	Bibliography	186
5	Earth Orbit on-Orbit Operations in Near-Earth	193
5.1	Energy Requirements	195
5.1.1	Getting to Low Earth Orbit: Energy and Propellant Requirements.	195
5.2	Launcher Propulsion System Characteristics.	197
5.2.1	Propellant Ratio to Deliver Propellant to LEO	198
5.2.2	Geostationary Orbit Satellite Size and Mass	201

5.3	Maneuver Between LEO and GEO, Change in Altitude at Same Orbital Inclination	201
5.3.1	Energy Requirements for Altitude Change.	203
5.3.2	Mass Ratio Required for Altitude Change.	203
5.3.3	Propellant Delivery Ratio for Altitude Change.	206
5.4	Changes in Orbital Inclination	207
5.4.1	Energy Requirements for Orbital Inclination Change	208
5.4.2	Mass Ratio Required for Orbital Inclination Change.	210
5.4.3	Propellant Delivery Ratio for Orbital Inclination Change.	212
5.5	Representative Space Transfer Vehicles.	214
5.6	Operational Considerations	215
5.6.1	Missions Per Propellant Delivery	216
5.6.2	Orbital Structures.	216
5.6.3	Orbital Constellations	217
5.6.4	Docking with Space Facilities and the ISS	219
5.6.5	Emergency Rescue Vehicle	221
5.7	Observations and Recommendations	222
	Bibliography	222
6	Earth–Moon System: Establishing a Solar System Presence	225
6.1	Earth–Moon Characteristics	225
6.2	Requirements to Travel to the Moon.	228
6.2.1	Sustained Operation Lunar Trajectories.	230
6.2.2	Launching from the Moon Surface.	230
6.3	History	233
6.3.1	USSR Exploration History	234
6.3.2	USA Exploration History	234
6.3.3	India Exploration History	234
6.3.4	Japan Exploration History.	234
6.3.5	China Exploration History.	235
6.4	Natural Versus Artificial Orbital Station Environments	235
6.4.1	Prior Orbital Stations	235
6.4.2	Artificial Orbital Stations	236
6.4.3	Natural Orbital Stations	237
6.5	Moon Base Functions	238
6.5.1	Martian Analog	239
6.5.2	Lunar Exploration	239
6.5.3	Manufacturing and Production Site.	241
	Bibliography	242
7	Exploration of Our Solar System	243
7.1	Review of Our Solar System Distances, Speeds, and Propulsion Requirements.	243
7.2	Alternative Energy Sources: Nuclear Energy	246
7.3	Limits of Chemical Propulsion and Alternatives	249
7.3.1	Energy Sources and Specific Impulse	250
7.3.2	The Need for Nuclear Space Propulsion	252
7.4	Nuclear Propulsion Strategies.	253
7.5	Nuclear Propulsion: A Historical Perspective	256
7.6	Nuclear Propulsion: Current Scenarios	261
7.7	Fundamentals of Nuclear Fission	268
7.8	Solid-Core NTR.	269

7.9	Particle Bed Reactor Technology	272
7.10	Cermet Technology	274
7.11	MITEE NTR	274
7.12	Gas-Core NTR	276
7.13	Rubbia's Engine	277
7.14	Considerations About NTR Propulsion	280
7.15	Hybrid Nuclear Rockets	280
7.16	Nuclear-Electric Propulsion (NEP)	282
7.17	Nuclear Arcjet Rockets	283
7.18	Nuclear-Electric Rockets	284
7.19	Electrostatic Ion Thrusters	285
7.20	MPD/MHD Thrusters	287
7.21	Hybrid NTR/NER Engines	291
7.22	Inductively Heated NTR	292
	7.22.1 Nuclear-Thermal-Electric Rocket (NTER)	293
7.23	VASIMR (Variable Specific Impulse Magneto-Plasma-Dynamic Rocket)	294
7.24	Propulsion Strategies Compared	298
7.25	Conclusions	299
	Bibliography	302
8	Stellar and Interstellar Precursor Missions	311
8.1	Introduction	311
	8.1.1 Quasi-Interstellar Destinations	313
	8.1.2 Time and Distance	316
8.2	Propulsion for Quasi-Interstellar and Stellar Missions	317
	8.2.1 Fusion Requirements and Impact on Propulsion	320
8.3	Traveling at Relativistic Speeds	322
8.4	Power for Quasi-Interstellar and Stellar Propulsion	325
8.5	Fusion Propulsion	326
	8.5.1 Mission Length Enabled by Fusion and Annihilation Propulsion	327
8.6	Fusion Fuels and Their Kinetics	328
8.7	Fusion Propulsion Strategies	330
	8.7.1 Thermal Versus Electric Fusion Propulsion	331
8.8	Fusion Propulsion Reactor Concepts	332
	8.8.1 Confinement Strategies	332
8.9	Magnetic Confinement Reactors (MCR)	333
8.10	Mirror Magnetic Confinement Rockets (Mirror MCR)	335
	8.10.1 Tokamak MCF Rockets	336
	8.10.2 Comparing Thermal and Electric MCF Rockets	339
8.11	Inertial Confinement Fusion	340
	8.11.1 Fusion Ignition	344
8.12	Inertial Electrostatic Confinement (IEC) Fusion	344
8.13	MCF and ICF Fusion: A Comparison	345
8.14	Magnetic-Inertial Confinement (MIC) Fusion	350
8.15	Fusion Propulsion Summary	352
8.16	Antimatter Propulsion	353
8.17	Impulsive Propulsion	354
8.18	Photonic Propulsion	355
8.19	Conclusions: Can We Reach the Stars?	356
	Bibliography	357

9 View to the Future and Exploration of Our Galaxy	363
9.1 Introduction	363
9.2 Issues in Developing Near- and Far-Galactic Space Exploration	364
9.3 Black Holes and Galactic Travel	369
9.4 Breakthrough Physics and Propulsion	372
9.5 Superluminal Speed: Is It Required?	374
9.6 Conclusions	377
Bibliography	377
Appendix A: Radiation—Risks, Dose Assessment, and Shielding	381
Appendix B: Assessment of Open Magnetic Fusion for Space Propulsion	403
Author Index	437
Subject Index	451

Future Spacecraft Propulsion Systems and Integration

Enabling Technologies for Space Exploration

Czysz, P.A.; Bruno, C.; Chudoba, B.

2018, LXI, 463 p. 349 illus., Hardcover

ISBN: 978-3-662-54742-7
