<b>1</b>	<b>Pipe Inspection Robots for Sewerage Pipelines</b>	<b>1</b>
1.1	A Broad Overview	1
1.1.1	Problem Statement	2
1.1.2	Sewer Pipes in Japan	3
1.1.3	Need for Accurate Determination of Damage in Sewer Pipes	3
1.2	Functional Requirements of a Sewer Inspection Robot	6
1.3	Sewer Inspection Techniques	6
1.3.1	CCTV Inspection Systems	7
1.3.2	Difficulties in CCTV Systems	9
1.4	Sewer Pipe Condition Assessment Protocols	10
1.5	Summary	11
	References	11
<b>2</b>	<b>Pipe Inspection Robots for Gas and Oil Pipelines</b>	<b>13</b>
2.1	Introduction	13
2.2	Traditional Locomotion Systems	16
2.3	Non-conventional Locomotion	17
2.4	More Complex Traction Systems	20
2.4.1	Three-Wheeled Self-adjusting Vehicle for Variable Pipe Diameter	20
2.4.2	MOGRER—A More Complex Variant of the FERRET Robot	21
2.4.3	Differential Drive In-Pipe Robot for Moving Inside Urban Gas Pipelines	21
2.4.4	Robot with Active Steering Capability for Urban Gas Pipelines	21
2.4.5	A Novel Turbine-Propelled Self-drive Pipe-Crawling Robot	23

2.4.6	Robot with Active Pipe Diameter Adaptability and Automatic Tractive Force Adjustment . . . . .	23
2.4.7	Adaptive Mobile Robot for In-Pipe Inspection Task . . . . .	24
2.4.8	Adaptive Track-Based Robot for In-Pipe Inspection . . . . .	25
2.4.9	Micro-In-Pipe Robot Based on Shape Memory Alloy Actuator . . . . .	25
2.4.10	Multi-functional Pipe Investigation Robot (PIR) with Linkage-Type Mechanical Clutch . . . . .	26
2.4.11	Planar Multi-functional PIR with Two Sets of Wheels . . . . .	26
2.4.12	Planar Adaptive Mechanism for an In-Pipe Robot . . . . .	28
2.4.13	Peristaltic Pipe-Crawling Robot for Long Distance Inspection of Sewer Pipes . . . . .	28
2.4.14	Inchworm-Based Vertical Climbing Robot with Adaptive Size . . . . .	29
2.5	Various Types of Wheel Assembly for the Pipe-Crawling Robots . . . . .	30
2.5.1	General Challenges Faced by the Pipe-Crawlers . . . . .	30
2.5.2	Performance Summary . . . . .	33
2.6	Various Sensing Mechanisms Used in Pipe-Crawlers . . . . .	34
2.6.1	Visual Inspection of Pipe Health Conditions . . . . .	35
2.6.2	Laser Profiling Sensor . . . . .	35
2.6.3	Sonar Pipe Profiling . . . . .	36
2.6.4	Polyvinylidene Difluoride (PVDF) Sensor . . . . .	36
2.6.5	LIDAR (Light Detection and Ranging) . . . . .	37
2.6.6	Ultrasonic Sensors . . . . .	38
2.6.7	Acoustic Leak Detection . . . . .	39
2.7	Merits and Demerits of Various Sensing Techniques . . . . .	39
2.8	DVSS (Digital Visual Sidewall Scanning) . . . . .	41
2.9	Microwave Sensor . . . . .	41
2.10	Summary . . . . .	42
	References . . . . .	43
<b>3</b>	<b>Basic Mechanical Design of Passively Transported Pipe Inspection Robots . . . . .</b>	<b>45</b>
3.1	Introduction . . . . .	45
3.2	Kinematic Analysis of Robot Module . . . . .	45
3.3	Estimation of Mass of the Robot . . . . .	49
3.3.1	Analysis of Drag Forces on the Crawler . . . . .	49
3.3.2	Quasi-static Analysis of the Robot . . . . .	51
3.3.3	Analysis of Rolling Friction Resistance . . . . .	52
3.4	Stress Analysis Between the Two Modules of a Robot . . . . .	54
3.5	Suspension Design for the Wheels . . . . .	56
3.6	Traction Force for Active Drive Mechanism . . . . .	57
	References . . . . .	60

<b>4 Experiments of Wireless Transfer Technology for Communication</b>	61
4.1 Introduction	61
4.2 Pipe Inspection System	62
4.2.1 Transmission Test in Steel Pipe	62
4.2.2 Transmission Test in Ceramic Pipe	65
4.3 Robot Test and Transmission Loss Measurement in Actual Ceramic Drainage Pipe in Japan	65
4.3.1 Robot Test	66
4.3.2 Transmission Loss Measurement	67
4.3.3 Measurement Results	67
4.3.4 Discussion of Results	68
4.4 Wireless Pipe Inspection System	70
4.4.1 Diagram of the Wireless Robot System	70
4.4.2 Inspection Robot	71
4.5 Platoon Moving	72
4.5.1 Experiment in Plastic Pipe	73
4.5.2 Experiment in Real-World Drain Pipe	74
4.6 Advanced Wireless Communication System	76
4.7 Summary	78
References	78
<b>5 Design of Communication System and Corresponding Robot for Pipe Inspection</b>	79
5.1 Introduction: Test Robot for Evaluating the Radio Wave Propagation Property	79
5.2 Wireless Communication System	80
5.3 Design and Implementation of a Wireless Communication System	80
5.4 Pipe Inspection Test Robot for Indoor Application	83
5.5 Wireless Communication System Demonstration and Test in Steel Pipe	85
5.6 Wireless Communication System Test for Drain Pipes	87
5.7 Pipe Inspection Using Mogurinko 200	89
5.8 Advanced Pipe Inspection Robot Using Rotating Probe	91
5.8.1 Robot Structure	93
5.8.2 Structure of the Rotating Probe	94
5.8.3 Operating Principles of the Probe	94
5.8.4 Performance Study of the Probe Integrated with the Robot	94
5.8.5 Data Capture Method	96
5.8.6 Details of Experimental Conditions	96
5.8.7 Typical Experimental Results	97
5.8.8 Summary of Experimental Results	98

5.8.9	Automatic Defect Recognition Method . . . . .	98
5.9	Pipe Inspection Robot with Multi-axes Movement . . . . .	98
5.9.1	Control System . . . . .	100
5.9.2	Experiments . . . . .	100
5.10	Summary . . . . .	102
	References . . . . .	105
<b>6</b>	<b>Video-Based Sensing and Image Processing of Sewer Pipes . . . . .</b>	<b>107</b>
6.1	Introduction . . . . .	107
6.2	Hardware Environment . . . . .	108
6.3	The Unfolding Algorithm . . . . .	109
6.3.1	Coordinate Transformation . . . . .	110
6.3.2	Interpolation . . . . .	112
6.4	Hough Transform Method . . . . .	114
6.4.1	Preprocessing for Hough Transform . . . . .	115
6.5	Least-Squares Technique . . . . .	116
6.6	Connection . . . . .	119
6.7	Summary . . . . .	121
	References . . . . .	121
<b>7</b>	<b>Introduction to Smart Materials . . . . .</b>	<b>123</b>
7.1	Introduction . . . . .	123
7.2	Piezoelectric Material . . . . .	125
7.3	Piezoelectric Coefficients . . . . .	129
7.4	Piezoelectric Sensors and Actuators . . . . .	131
7.4.1	Uniform Strain Model of Induced Strain Actuation . . . . .	131
7.4.2	Euler–Bernoulli Model of Induced Strain Actuation . . . . .	134
7.5	Piezoelectric Sensors . . . . .	135
7.6	Magnetostrictive Material . . . . .	137
7.7	Magnetostrictive Sensors and Actuators . . . . .	139
7.8	Active Fiber Composites . . . . .	142
7.9	Shape Memory Alloy (SMA)-Based Actuators . . . . .	143
7.10	Electrorheological and Magnetorheological Fluid-Based Dampers . . . . .	147
7.11	Some Recent Developments . . . . .	149
	References . . . . .	150
<b>8</b>	<b>Smart Sensors for Structural Health Monitoring . . . . .</b>	<b>153</b>
8.1	Introduction . . . . .	153
8.2	Industrial Applications of SHM . . . . .	156
8.3	SHM for Vibration Sensing and Control . . . . .	157
8.3.1	SHM for Actuation of Composite Beams . . . . .	158
8.4	Distributed Vibration Control of Symmetrically Laminated Composite Beam . . . . .	158
8.5	Asymmetric Composite Beam . . . . .	163

8.6	SHM for Sensing Damages of Composite Structure . . . . .	166
8.7	Damage Identification Criteria for SHM . . . . .	170
8.8	Features of Various Damage Indices . . . . .	174
8.9	Summary . . . . .	183
	References . . . . .	184
<b>9</b>	<b>Future Directions of Pipe Investigating Robots (PIRs) . . . . .</b>	<b>185</b>
9.1	Introduction . . . . .	185
9.2	Future Directions in Advanced Robot Development . . . . .	185
9.3	New Wireless Communication System Design . . . . .	188
9.4	Advanced Sensors . . . . .	190
	9.4.1 PVDF Probe Sensor . . . . .	190
	9.4.2 Opto-electric Sensors . . . . .	192
9.5	Software Development . . . . .	194
9.6	Multi-Axis Robots . . . . .	197
9.7	Global Summary . . . . .	200
	References . . . . .	200

Pipe Inspection Robots for Structural Health and  
Condition Monitoring

Ogai, H.; Bhattacharya, B.

2018, XVI, 201 p. 180 illus., 130 illus. in color.,

Hardcover

ISBN: 978-81-322-3749-5
