

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Background and Significance of the Research	1
1.2	Review of Wave-Powered Desalination Technology	11
1.3	Review of Raft-Type Wave Energy Converters	13
1.4	Research Contents and Outline of the Thesis	16
	References	18
<b>2</b>	<b>Analytical Study on Hydrodynamic Characteristics</b>	<b>21</b>
2.1	Brief Introduction	21
2.2	Analytical Model	23
2.2.1	Diffraction and Radiation Problem	24
2.2.2	Response of Raft-Type Device	31
2.2.3	Power Absorption Efficiency, Reflection and Transmission Coefficients	32
2.3	Model Validation	33
2.4	Effects of Multiple Parameters	39
2.4.1	Linear PTO Damping	39
2.4.2	Spacing Distance	40
2.4.3	Draft	41
2.4.4	Raft Numbers	43
2.4.5	Raft Length	44
2.4.6	Raft Length Ratio	45
2.5	Summary	46
	References	47
<b>3</b>	<b>Numerical Study on Hydrodynamic Characteristics</b>	<b>49</b>
3.1	Brief Introduction	49
3.2	Formulation of the Problem	51
3.2.1	Frequency Domain Analysis	54
3.2.2	Time Domain Analysis	55

3.3	Convergence Analysis and Model Validation . . . . .	56
3.4	Results of Frequency Domain Analysis . . . . .	58
3.4.1	Effect of Raft Length and Linear Damping . . . . .	60
3.4.2	Effect of Radius of Gyration . . . . .	62
3.4.3	Effect of Axis Ratio . . . . .	67
3.4.4	Effect of PTO Stiffness . . . . .	69
3.5	Results of Time Domain Analysis . . . . .	72
3.5.1	Effect of Coulomb Damping . . . . .	72
3.5.2	Effect of Radius of Gyration . . . . .	75
3.5.3	Effect of Latching Control. . . . .	75
3.6	Summary . . . . .	77
	References. . . . .	78
<b>4</b>	<b>Maximum Power Absorption by Two Interconnected Rafts . . . . .</b>	<b>81</b>
4.1	Brief Introduction . . . . .	81
4.2	Mathematical Model. . . . .	82
4.2.1	Maximum Power Absorption with No Constraints . . . . .	85
4.2.2	Maximum Power Absorption with Constraints . . . . .	88
4.3	Results and Discussion . . . . .	91
4.3.1	Model Validation . . . . .	91
4.3.2	Maximum Power Absorption with Optimized $c_{PTO}$ . . . . .	92
4.3.3	Maximum Power Absorption with Optimized $c_{PTO}$ and $z_{PTO}$ . . . . .	96
4.3.4	Wave Power Absorption Under Different Principles . . . . .	98
4.4	Summary . . . . .	101
	References. . . . .	101
<b>5</b>	<b>Maximum Power Absorption by Multiple Connected Rafts. . . . .</b>	<b>103</b>
5.1	Brief Introduction . . . . .	103
5.2	Mathematical Model. . . . .	104
5.2.1	System Without Connection Constraints or Motion Constraints . . . . .	105
5.2.2	System with Motion Constraints . . . . .	106
5.2.3	System with Connection Constraints. . . . .	107
5.2.4	System with Connection Constraints and Motion Constraints . . . . .	107
5.3	Numerical Method . . . . .	109
5.4	Results and Discussion. . . . .	111
5.4.1	Model Validation . . . . .	112
5.4.2	Effect of Connection Condition. . . . .	114
5.4.3	Effect of Raft Width . . . . .	114
5.4.4	Effect of Motion Constraints . . . . .	115
5.5	Summary . . . . .	120
	References. . . . .	120

<b>6</b>	<b>Hydrodynamics of a Raft-Type Device with Oscillator System . . . . .</b>	<b>123</b>
6.1	Brief Introduction . . . . .	123
6.2	Mathematical Model . . . . .	124
6.2.1	Frequency Domain Analysis . . . . .	124
6.2.2	Time Domain Analysis . . . . .	127
6.3	Results and Discussion . . . . .	128
6.3.1	Frequency Domain Analysis . . . . .	128
6.3.2	Time Domain Analysis . . . . .	134
6.4	Summary . . . . .	136
	References. . . . .	137
<b>7</b>	<b>Hydrodynamics of a Raft-Type Device with Water Tanks. . . . .</b>	<b>139</b>
7.1	Brief Introduction . . . . .	139
7.2	Mathematical Model . . . . .	140
7.2.1	Response of Hinged Rafts . . . . .	141
7.2.2	Sloshing . . . . .	142
7.2.3	Coupled Motion Equation . . . . .	143
7.3	Results and Discussion . . . . .	144
7.3.1	Effect of PTO Damping . . . . .	144
7.3.2	Effect of Tank Length . . . . .	144
7.3.3	Effect of Tank Width . . . . .	148
7.3.4	Effect of Tank Filling Depths . . . . .	149
7.3.5	Effect of Tank Position . . . . .	150
7.4	Summary . . . . .	152
	References. . . . .	152
<b>8</b>	<b>Hydrodynamics of a Wave-Powered Reverse Osmosis System. . . . .</b>	<b>155</b>
8.1	Brief Introduction . . . . .	155
8.2	Mathematical Model . . . . .	156
8.2.1	Model Description . . . . .	156
8.2.2	Equations for Raft-Type WEC . . . . .	158
8.2.3	Equations for RO Module . . . . .	158
8.2.4	Equations for High Pressure Accumulator . . . . .	161
8.3	Results and Discussion . . . . .	162
8.3.1	Model Validation . . . . .	162
8.3.2	Transient Response of WPRO System . . . . .	162
8.3.3	Effect of Cylinder . . . . .	165
8.3.4	Effect of High Pressure Accumulator . . . . .	167
8.3.5	Effect of Brine Channel Width of RO Element . . . . .	168
8.3.6	Effect of Wave Period . . . . .	169
8.4	Summary . . . . .	170
	References. . . . .	171

<b>9</b>	<b>Conclusions and Future Work</b> . . . . .	173
9.1	Conclusions . . . . .	173
9.2	Major Contribution . . . . .	176
9.3	Future Work . . . . .	177
<b>Appendix A: Proofs of the Same Transmission Coefficient for Raft Devices With Inverse <math>a_1/a_2</math>.</b> . . . . .		179
<b>Appendix B: Expressions of <math>T[q, I]</math> and <math>P_3</math> for Two Hinged Rafts Under Motion Constraints</b> . . . . .		181
<b>About the Author</b> . . . . .		183

Study on Hydrodynamic Characteristics of the Raft-type  
Wave-Powered Desalination Device

Zheng, S.

2018, XVII, 183 p. 115 illus., Hardcover

ISBN: 978-981-10-5516-4
