

Contents

1	Introduction	1
1.1	Robot Mechanism Topology	1
1.1.1	Topological Structure Design of Mechanisms	1
1.1.2	Basic Tasks of Mechanism Topology	1
1.1.3	Basic Mode of Mechanism Topology Design	2
1.1.4	Main Methods for Mechanism Topology Design	2
1.1.5	Mechanism Composition Principles and Mechanism Theory Systems	4
1.2	Objectives and Originality of This Book	5
1.2.1	Objectives	5
1.2.2	Basic Concepts	5
1.2.3	Mechanism Composition Principle	6
1.2.4	Basic Equations	6
1.2.5	Topological Characteristics of Parallel Mechanisms	7
1.2.6	Topology Design of Parallel Mechanisms	8
1.2.7	Application	8
1.2.8	Mechanism Theory System Based on SOC Unit	9
1.3	Summary	9
	References	10
2	Topological Structure of Mechanisms and Its Symbolic Representation	15
2.1	Introduction	15
2.1.1	Traditional Description of Mechanism Topological Structure	15
2.1.2	Current Description of Mechanism Topological Structure	16
2.1.3	Topology Structure Design of Mechanisms	16

2.2	Three Key Elements of Mechanism Topological Structure	16
2.2.1	Type of Kinematic Pairs	16
2.2.2	SOC Unit and Its Connection Relations	17
2.2.3	Geometric Constraint Type of Axes	18
2.3	Symbolic Representation of Mechanism Topological Structure	19
2.3.1	Symbolic Representation of Multi-DOF Pair	19
2.3.2	Symbolic Representation of Topological Structure	19
2.3.3	Composition of an SOC	21
2.4	Topological Structure Invariance	21
2.5	Definition of Mechanism Topological Structure	22
2.6	Classification of Mechanisms Based on Topological Structure	22
2.7	Summary	23
	References	24
3	Position and Orientation Characteristics Set	27
3.1	Introduction	27
3.2	POC Sets of Kinematic Pairs	28
3.2.1	POC Set of a P Pair	28
3.2.2	POC Set of an R Pair	30
3.2.3	POC Set of an H Pair	32
3.3	POC Set of a Mechanism	34
3.3.1	An Introductory Example	34
3.3.2	VC Set of a Mechanism	36
3.3.3	POC Set of a Mechanism	38
3.4	Dimension of POC Set	39
3.5	Basic types of POC Set	40
3.6	Summary	40
	References	41
4	Position and Orientation Characteristics Equation for Serial Mechanisms	43
4.1	Introduction	43
4.2	Velocity Analysis of Serial Mechanisms	44
4.3	VC Equation for Serial Mechanisms and Its Operation Rules	45
4.3.1	VC Equation for Serial Mechanisms	45
4.3.2	Operation Rules for VC Equation	46
4.4	POC Equation for Serial Mechanisms and Its Operation Rules	48
4.4.1	POC Equation for Serial Mechanisms	48
4.4.2	Operation Rules for POC Equation	50

4.5	Calculation of POC Set for Mechanisms	52
4.5.1	Main Steps	52
4.5.2	Examples	53
4.6	Number of Independent Displacement Equations of Single-Loop Mechanisms	62
4.7	Summary	65
	References	66
5	Position and Orientation Characteristics Equation for Parallel Mechanisms	67
5.1	Introduction	67
5.2	VC Equation for Parallel Mechanisms and Its Operation Rules . . .	68
5.2.1	An Introductory Example	68
5.2.2	VC Equation for Parallel Mechanisms	70
5.2.3	Operation Rules for VE Equation	72
5.3	POC Equation for Parallel Mechanisms and Its Operation Rules	75
5.3.1	POC Equation for Parallel Mechanisms	75
5.3.2	Operation Rules for POC Equation	76
5.4	Basic Characteristics of Branches	79
5.4.1	POC Set of Branches	79
5.4.2	SOC Branch and HSOC Branch	79
5.4.3	Topological Equivalence Principle	81
5.5	Calculation of POC Set for Parallel Mechanisms	82
5.5.1	Main Steps	82
5.5.2	Examples	83
5.6	Summary	93
	References	94
6	General Formula of Degrees of Freedom for Spatial Mechanisms	95
6.1	Introduction	95
6.1.1	DOF Formula Based on Screw Theory	95
6.1.2	DOF Formula Based on Linear Transformation	97
6.1.3	DOF Formula Based on Displacement Subgroup/Submanifold	98
6.1.4	DOF Formula Based on POC Set	98
6.2	The General DOF Formula	98
6.3	Applications of the General DOF Formula	100
6.3.1	Criteria for Determination of Inactive Pairs	100
6.3.2	Criteria for Selection of Driving Pairs	101
6.3.3	Number of Independent Displacement Equations	101
6.3.4	Number of Overconstraints	101
6.3.5	Redundancy	102

6.4	DOF Calculation	102
6.4.1	Main Steps	102
6.4.2	Examples	102
6.5	Summary	120
	References	121
7	Mechanism Composition Principle Based on Single-Open-Chain	
	Unit	123
7.1	Introduction	123
7.1.1	Mechanism Composition Principle Based on AKC	123
7.1.2	Mechanism Composition Principle Based on Link-Pair Unit	126
7.1.3	Mechanism Composition Principle Based on Loop Unit	126
7.2	Mechanism Composition Principle Based on SOC Unit	128
7.2.1	Mechanism Composition Principle	128
7.2.2	Constraint Degree of SOC	129
7.3	Coupling Degree of AKC	131
7.3.1	Structure Decomposition of AKC Based on SOC Unit	131
7.3.2	Coupling Degree of AKC	131
7.3.3	Examples	132
7.4	The General Method for AKC Determination	136
7.4.1	Structure Decomposition of Mechanisms	136
7.4.2	Criteria for AKC Determination	136
7.4.3	Examples	137
7.5	Determination of DOF Type Based on AKC	144
7.5.1	Full DOF and Its Existence Condition	144
7.5.2	Partial DOF and Its Existence Condition	145
7.5.3	Separable DOF and Its Existence Condition	145
7.6	Motion Decoupling	146
7.6.1	Motion Decoupling of Parallel Mechanisms	146
7.6.2	Motion Decoupling Based on Partial DOF	146
7.6.3	Motion Decoupling Based on Geometrical Conditions of Assembling Branches	147
7.7	Applications of the Composition Principle Based on SOC Unit	149
7.7.1	Topological Structure Synthesis Method Based on SOC Unit	149
7.7.2	Kinematic Analysis Method Based on SOC Unit	150
7.7.3	Dynamic Analysis Method Based on SOC Unit	152
7.8	Summary	153
	References	153

8	General Method for Structure Synthesis of Serial Mechanisms . . .	157
8.1	Introduction	157
8.2	Method for Structure Synthesis of Serial Mechanisms	158
8.2.1	Basic Requirements of Structure Synthesis	158
8.2.2	General Procedure for Structure Synthesis of Serial Mechanisms	158
8.2.3	Main Steps of Structure Synthesis	158
8.2.4	Examples	161
8.3	Structure Types of Serial Mechanisms	166
8.3.1	Structure Types Containing Only R Pairs and P Pairs	166
8.3.2	Expansion of Structure Types	169
8.4	Structure Synthesis of Single-Loop Mechanisms	169
8.4.1	Classification of Single-Loop Mechanisms	169
8.4.2	Structure Synthesis of Single-Loop Mechanisms	169
8.4.3	Structure Types of Single-Loop Mechanisms	172
8.5	Summary	174
	References	174
9	General Method for Topology Design of Parallel Mechanisms . . .	177
9.1	Introduction	177
9.1.1	Basic Mode of Mechanism Topology Design	177
9.1.2	Basic Requirements for Topology Design	177
9.1.3	Main Method for Topology Design of Parallel Mechanisms	178
9.2	General Procedure for Topology Design of Parallel Mechanisms	179
9.3	Structure Synthesis of Branches	181
9.3.1	Basic Requirements for Structure Synthesis of Branches	181
9.3.2	Structure Synthesis of SOC Branches	181
9.3.3	Structure Synthesis of HSOC Branches	183
9.4	Branch Combination Schemes	187
9.4.1	Number of Branches	187
9.4.2	Branch Combination Schemes	189
9.5	Branch Assembling Schemes	190
9.5.1	Determination of Geometrical Conditions for Assembling Branch	190
9.5.2	Assembling Schemes of the Branch Combination	194
9.5.3	Check DOF of the PM	196
9.5.4	Selection of Driving Pairs	196

9.6	Performance Analysis and Classification of PM Structure	
	Types	197
9.6.1	Topological Characteristics of Parallel Mechanisms . . .	197
9.6.2	Performance Analysis of Structure Type	199
9.6.3	Classification of Parallel Mechanisms Based on Topological Characteristics	202
9.7	Summary	204
	References	205
10	Topology Design of (3T-1R) Parallel Mechanisms	207
10.1	Introduction	207
10.2	Topology Design of (3T-1R) Parallel Mechanisms	208
10.2.1	Basic Requirements for Topology Design	208
10.2.2	Structure Synthesis of Branches	208
10.2.3	Branch Combination Schemes	214
10.2.4	Branch Assembling Schemes	215
10.2.5	Structure Types of (3T-1R) Parallel Mechanism	222
10.2.6	Performance Analysis of PM Structure Types Based on Topological Characteristics	226
10.2.7	Classification of (3T-1R) PM Structure Types Based on Performance Analysis	230
10.3	Summary	233
	References	234

Topology Design of Robot Mechanisms

Yang, T.-L.; Liu, A.; Shen, H.; Hang, L.-B.; Luo, Y.; Jin, Q.
