

Contents

1	Turning the Tide in the Construction Industry: From Traditional Construction Safety Measures to an Innovative Automated Approach	1
1	Introduction	1
2	Traditional Construction Safety Measures	3
3	Why Is an Automated Construction Process Necessary? A Bird's Eye View of Recent Automated Construction Technologies' Development	11
3.1	Building Information Modelling	11
3.2	Additive Manufacturing	12
3.3	Virtual Reality (VR)	13
3.4	Internet of Things (IoT)	13
3.5	Robots	13
3.6	Software Engineering for Construction Safety	14
4	Major Hurdles in Moving from Manual Work to an Automated Construction Approach	14
4.1	Economic Costs	14
4.2	Institutions and Technological Change	15
5	Should We Adopt the New Technologies? A Cost Benefit Analysis (CBA) Approach	15
6	Objectives, Hypothesis and Research Methods	16
7	Conclusion	16
	References	16
2	Robots for the Construction Industry	23
1	Introduction: A General Overview on Robots	23
2	Popularity in Robots, Robotic Arms and Wearable Robotic Searches as Reflected in Google Searches: A Big Data Analysis from 2004 to the Present	25
3	Information Flow Between Robot and Human	26
4	Robotics Application in the Construction Industry	28

4.1	Four Types of Robots in the Construction Industry	30
5	Monetary Benefits of Using Robots on Sites	32
6	Are Robots Safe to Use? Safety Issues in Using Robots	33
7	Research Method	35
8	Practitioners Viewpoints on Robots	35
8.1	Implications of Robots on Construction Safety	35
8.2	Costs of Using Robots	36
8.3	Robots Replacing Manual Workers on Sites Is Simply a Fantasy	37
8.4	Are Robots Threats to Construction Workers?	38
9	Modern Application of Robots, Robotic Arm and Wearable Robots on Sites	39
9.1	Application of Robots on Sites	39
9.2	Application of Wearable Robotics.	40
9.3	Focus Group Interview Results of Practitioners' Perspectives on the Exoskeleton	43
10	Conclusion	45
	References.	46
3	Building Information Modelling and Construction Safety	47
1	Introduction	47
2	Software for BIM.	49
2.1	BIM Software: Autodesk.	49
2.2	Graphisoft.	50
2.3	Planner 5D	50
2.4	UE4	54
3	Costs and Benefits of BIM.	56
3.1	Accidents Prevention via Better Design	57
3.2	Benefits of BIM	57
3.3	Costs of BIM Software	63
4	Research Method	63
4.1	BIM's Application in Hong Kong.	63
4.2	BIM's Application with Internet of Things in a Hospital Building Project in Adelaide.	65
4.3	BIM's Application in Casa Magayon in Costa Rica	66
5	Viewpoints of Different Stakeholders on BIM	70
5.1	Popularity of BIM in Recent Years.	70
5.2	Costs and Benefits of BIM	70
6	Conclusion	71
	References.	71
4	Additive Manufacturing, Prosumption and Construction Safety	73
1	Introduction	73
2	Additive Manufacturing	75

2.1	Principles of Additive Manufacturing	76
2.2	Factors Which Affect Quality of Additive Manufacturing	79
3	Prosumption and Additive Manufacturing	79
4	Software for Additive Manufacturing	81
4.1	Tinkercad	81
5	A Growing Trend in the Awareness of Additive Manufacturing: A Big Data Analysis	83
6	Methods Used for Additive Manufacturing in Construction Industry	84
6.1	Concrete Printing	84
6.2	D-Shape	85
6.3	Comparison Between Contour Crafting, Concrete Printing and D-Shape	85
7	Some of the Sample Applications of Additive Manufacturing in Construction Industries.	86
7.1	Three-Dimensional House Printing	86
7.2	Three-Dimensional Bridges Printing	86
8	Costs and Benefits of Additive Manufacturing in Construction Industry	86
8.1	Benefits.	86
8.2	Costs.	90
9	Research Method	91
9.1	Results of the Interviews.	91
9.2	Implications of Additive Manufacturing on Construction Safety	92
9.3	Costs of Additive Manufacturing	93
9.4	Improvements in Communications Among Different Stakeholders	94
9.5	Better Quality Control.	94
10	Case Studies Application in Construction Industry to Ensure Safety On-sites	94
11	Conclusion	102
	References.	102
5	Software Engineering and Reducing Construction Fatalities: An Example of the Use of Chatbot	105
1	Construction Fatalities	105
2	The Role of Software Engineering in On-site Construction Safety	107
3	Software and Algorithms that Help Improve Construction Safety Performance on Sites.	107
3.1	Geographical Information Systems (GIS)	107
3.2	Smart Helmets System	108
3.3	Virtual Reality and Augmented Reality.	108

3.4	On-site A.I Software for Use by Designers: Knowledge-Based Systems	109
3.5	Computer Algorithms that Enhance Construction Safety	111
3.6	Can Software and Algorithms Enhance Safety Communications?	111
4	Chatbot.	111
5	Costs and Benefits of Chatbot	112
6	Making a Chatbot for Construction Safety Knowledge Sharing	112
7	Discussion and Conclusion.	114
	References.	114
6	Virtual Reality and Construction Safety	117
1	Introduction	117
2	Virtual Reality	118
3	Popularity of VR as Reflected in the Number of Google Searches: Big Data Analysis.	120
4	VR Applications.	121
4.1	Gaming Industry	121
4.2	Driving Simulations	122
4.3	Shopping Mall Promotions	123
4.4	VR Application in Teaching and Learning: An Example of Edutainment	123
4.5	VR Application in Construction Industry	124
5	Cost–Benefit Analysis of VR Application in Construction Industry	126
5.1	Costs of VR	126
5.2	Benefits of Adopting VR	127
6	Mixed Research Method.	129
7	Construction Practitioners’ Viewpoints on Virtual Reality	129
7.1	Benefits of VR in Construction Safety	129
7.2	Costs.	130
7.3	“I Do not Know What It Is” Is the Major Hang-up in Adopting VR On-site	131
8	Case Studies.	132
8.1	Case Study One: VR Application in Safety Training in Hong Kong.	132
8.2	Case Study Two: VR Application in Planning Stage in Seattle, United States	133
9	Conclusion	134
	References.	135
7	Smart Working Environments Using the Internet of Things and Construction Site Safety	137
1	Introduction	137
2	Internet of Things (IoT) and Smart Object Interactions	139

3	Radio-Frequency Identification (RFID).....	140
4	IoT Application on Construction Sites	141
5	Research Method	142
5.1	Big Data Analytics	142
5.2	Content Analysis.....	143
5.3	Interviews, a Real-Life Application of an IoT Application in Adelaide, and a Proposal for an IoT Application	144
6	Results	145
6.1	The Trend Towards IoT in Recent Years: A Big Data Analytics Approach.....	145
6.2	Costs and Benefits of IoT, According to the Literature: Content Analysis Results	145
6.3	Results of the Interviews.....	148
6.4	RFID Application in Adelaide.....	150
6.5	Other Possible Application of IoT on Construction Sites	150
7	Discussion and Conclusion.....	152
	References.....	152
8	RAND Appropriateness Study in Regard to Automated Construction Safety: A Global Perspective	155
1	Introduction	155
2	Appropriateness	156
3	Institutional Theory	157
4	Cost/Benefit Analysis	157
5	The RAND Appropriateness Research Method.....	158
6	Results	160
7	Discussion and Conclusion.....	163
	Appendix 1	165
	References.....	171

An Economic Analysis on Automated Construction
Safety

Internet of Things, Artificial Intelligence and 3D Printing

Li, R.Y.M.

2018, IX, 173 p. 116 illus., 111 illus. in color., Hardcover

ISBN: 978-981-10-5770-0
