

Contents

1	Signal Dynamics as Superpositions of Sinusoidal Waves in the Time Domain	1
1.1	Sinusoidal Waves	1
1.1.1	Representation of Sinusoidal Waves	1
1.1.2	Complex Exponential Function	2
1.1.3	Complex Variables and Logarithmic Functions	3
1.2	Temporal Fluctuations of Sinusoidal Waves in the Time Domain	5
1.2.1	Analytic Signals and Envelopes	5
1.2.2	Beats	7
1.2.3	Modulation	8
1.2.4	Phase and Group Speed	10
1.2.5	Period and Fundamental Frequency	12
1.2.6	Missing Fundamental	12
1.2.7	Harmonic, Nonharmonic, and Almost Periodic Functions	13
1.3	Spectral Modification by the Superposition of Sinusoidal Waves with Different Phases	16
1.3.1	Interference of Sinusoidal Waves	16
1.3.2	Superposition with Different Phases in the Time Domain	17
1.3.3	Cross-Correlation of Sinusoidal Waves	19
1.3.4	Correlation Functions	21
1.4	Exercises	24
	References	29
2	Sinusoidal Waves as Random Variables	31
2.1	Random Variables	31
2.1.1	Probability Distribution and Expectation	31
2.1.2	Sum of Independent Random Variables and Convolution	34

2.2	Correlations	35
2.2.1	Correlation Functions for Random Variables	35
2.2.2	Correlation and Square Correlation	36
2.3	Probability Distribution for Sinusoidal Waves	37
2.3.1	Probability Density Function	37
2.3.2	Probability Density Function for Sinusoidal Wave	39
2.3.3	Uncorrelation and Independence of Random Variables	41
2.3.4	Binaural Merit in Listening to Pairs of Signals	43
2.4	Exercises	47
	References	49
3	Fourier Transform and Superposition of Sinusoidal Functions	51
3.1	Convolution, Generating Functions, and Fourier Transform	52
3.1.1	Generating Function and Combination	52
3.1.2	Fourier Transform and Convolution	53
3.1.3	Periodicity of the Fourier Transform	54
3.1.4	Inverse Fourier Transform	54
3.1.5	Auto-Correlation and Auto-Convolution for Signal Dynamics in Time Domain	55
3.1.6	Decomposition of Sequence into Even and Odd Sequences	59
3.1.7	Analytic Sequence and Envelope	61
3.2	Symbolic Expression of Time Delay and Convolution	63
3.2.1	Magnitude Spectral Modification by Superposition of Direct and Delayed Sound	63
3.2.2	Effect of Phase on the Direct Sound from the Time Delay	64
3.2.3	Clustered Time Sequence and Its Spectral Effect	67
3.2.4	Sinc Function and Auto-Correlation	69
3.3	Fourier Transform of Functions	70
3.3.1	Fourier Transform	70
3.3.2	Sinc Function	71
3.3.3	Spectral Weighting and Auto-Correlation Function	72
3.3.4	Windowing in the Time Domain	76
3.4	Triangular Windowing and Group Delay	78
3.4.1	Phase and Group Delay Functions	78
3.4.2	Group Delay Function for N -Sample Delay of Reflection	81
3.4.3	Group Delay Functions and Locations of Zeros	82
3.5	Fourier Series Expansion of a Periodic Function	83
3.5.1	Fourier Series	83
3.5.2	Auto-Convolution and Auto-Correlation of Spectral Sequence	84

3.5.3	Dirichlet Function	85
3.6	Exercises	87
	References	89
4	Differential Equations for Sinusoidal Waves	91
4.1	Differential Equations and Linear Systems	91
4.1.1	Single-Degree-of-Freedom System	91
4.1.2	Sinusoidal Function and General Solution of Single-Degree-of-Freedom System	93
4.1.3	Impulse Response	96
4.1.4	Response to an External Force	97
4.1.5	Transient and Resonant Responses to a Sinusoidal Function	98
4.2	Source Waveform Estimation Through Differential Equation	103
4.2.1	Observed Response from a Single-Degree-of-Freedom System	103
4.2.2	Source Waveform Recovery for a Single-Degree-of-Freedom System	105
4.3	Wave Equations for Sinusoidal Traveling Waves	106
4.3.1	Equation of Waves	106
4.3.2	Propagation of Sinusoidal Waves	107
4.4	Exercises	109
	References	111
5	Discrete Signals and Linear Systems	113
5.1	Linear Equations	113
5.1.1	Linear Combination of Vectors	113
5.1.2	Linear Equation and Linear Combination	114
5.1.3	Minimum-Norm Solution	117
5.1.4	Minimum-Norm Solution by Least-Squares Error Criterion	119
5.2	Linear Regression	123
5.2.1	Least-Squares Error Solution	123
5.2.2	Example of Linear Regression Analysis	125
5.3	Orthogonal Regression Analysis	126
5.3.1	Orthogonal Decomposition and Regression	126
5.3.2	Quadratic Form	127
5.3.3	Representation of a Matrix by Its Diagonal Matrix of Eigenvalues	128
5.3.4	Quadratic Form and Orthogonal Eigenvectors	128
5.3.5	Binaural Merit and Principal Component Analysis	131
5.3.6	Source Separation by Decorrelation of Pair of Signals	132

5.3.7	Decorrelation of Signals and Estimation of Impulse Response	136
5.4	Discrete Fourier Transform and Spectral Representation of Sequences	139
5.4.1	Fourier and Discrete Fourier Transforms of a Sequence	139
5.4.2	Examples of Spectral Sequences by Discrete Fourier Transform	141
5.4.3	Violation of Sampling Condition	145
5.5	Exercises	146
	References	148
6	Transfer Functions and Sequences in the Time Domain	149
6.1	z -Transforms	149
6.1.1	Traveling Waves and the Pure Delay System	149
6.1.2	Discrete System and z -Transform	151
6.2	Phase Response and Symmetric Zeros	152
6.2.1	Accumulation Phase and Group Delay	152
6.2.2	Linear Phase and Pair of Symmetric Zeros with Respect to the Unit Circle	156
6.2.3	Power Spectral Functions for Pair of Symmetric Zeros	158
6.3	Poles for Resonance Systems and Transient Time Responses	161
6.3.1	Cumulative Spectral Analysis of the Transient Response for a Resonance System	161
6.4	Unstable Pole for Causal System	167
6.4.1	Poles and Howling	167
6.4.2	Detection of Unstable Time Responses	169
6.5	Poles and Filtering	170
6.5.1	Notch Filtering	170
6.5.2	Inverse and All-Pass Filtering for Predicted Pole	172
6.5.3	Inverse Filter for the Minimum Phase System	174
6.6	Exercises	175
	References	176
7	Signal Dynamics for Time and Frequency Domains	177
7.1	Enhancement of Signal Dynamics for Noisy Waveforms	178
7.1.1	Superposition of Noisy Signals	178
7.1.2	Multiplication of Noisy Signals	180
7.2	Estimation of Path Information	180
7.3	Spectral Peak Selection and Representation of Time Waveforms	182
7.3.1	Estimation of Spectral Sequence of Sinusoidal Function	182

7.3.2	Spectral Peak Estimation for Single Sinusoidal Sequence	186
7.3.3	Time-Variant Spectral Peaks in Time Waveforms	189
7.3.4	Fundamental Frequency Tracking of Time Waveform	190
7.4	Modal Overlap and Representation of Envelopes	194
7.4.1	Separation of Auto-correlation Functions	194
7.4.2	Estimating Envelopes of Sound in the Time Domain	197
7.4.3	Examples of Signal Decomposition into Clustered Sinusoids	199
7.4.4	Separation of Direct Wave	200
7.5	Exercises	208
	References	209
8	Time and Frequency Responses of Spherical Source	211
8.1	Impulse Responses of a Point Source	211
8.1.1	Pressure Response of a Point Source	211
8.1.2	Steady-State Response of a Point Source	214
8.1.3	Acoustic Transfer Impedance and Impulse Response of a Point Source	215
8.2	Transient Response of a Spherical Source	217
8.2.1	Steady-State Response	217
8.2.2	Acoustic Transfer Impedance of Spherical Source	218
8.3	Acoustic Radiation Impedance and Pressure Response in the Time Domain	219
8.3.1	Acoustic Radiation Impedance	219
8.3.2	Radiation Impedance in the Time Domain	221
8.3.3	Pressure Response in Time Domain	222
8.4	Exercises	223
	References	224
9	Wave Equation and Its General Solution in the Time Domain	225
9.1	Initial Disturbance and One-Dimensional Waves	225
9.1.1	Initial Condition and Impulse Response	226
9.1.2	Response to Initial Disturbance of One-Dimensional Wave Equation	226
9.2	Wave Propagation of a Spherically Symmetric Wave	230
9.2.1	Wave Equation for a Spherically Symmetric Wave	230
9.2.2	General Solution for the Spherically Symmetric Wave	232
9.2.3	Free Oscillation of a Spherically Symmetric Wave	233
9.2.4	Propagation of the Initial Disturbance	234

9.3	General Solution of the Wave Equation	238
9.3.1	Initial Condition and Wave Propagation in Three-Dimensional Space	238
9.4	Exercises	240
	References	241
10	Sound Traveling in One-Dimensional Space	243
10.1	Time-Domain Approach to Pulse-Like Sound Traveling in Acoustic Tube	243
10.1.1	Sound Traveling in a Tube with Open Ends	243
10.1.2	Sound in an Open–Closed Tube	244
10.1.3	Period and Fundamental Frequency	245
10.1.4	Magnitude Frequency Characteristics of Pulse Train	246
10.2	Boundary and Driving Conditions of Sound Traveling in a Tube	248
10.2.1	Sinusoidal Waves Under Generalized Boundary Conditions	248
10.2.2	Generalized Boundary Conditions in Time-Delayed Reflection	249
10.2.3	Driving Condition for the Acoustic Tube	251
