

Contents

1	Introduction	1
1.1	Free Vibration of a Single-Degree-of-Freedom System	2
1.2	Free Vibration of a Damped, Single-Degree-of-Freedom System	3
1.3	Forced Vibration of a Single-Degree-of-Freedom System	5
1.4	Forced Vibration of a Damped, Single-Degree-of-Freedom System	7
1.5	Two-Degrees-of-Freedom System	8
1.6	Free Vibration of a Continuous System	11
1.7	Hamilton's Principle	18
1.8	Diagonalization of a Symmetric Matrix	20
1.9	Transformation of Coordinates	22
1.10	Momentum Theory for Axial Flight	23
1.11	Momentum Theory for Forward Flight	25
1.12	Newton-Raphson Method	28
1.13	Blade Element Theory	28
1.14	Derivation of Equation of Motion of Flapping Rigid Blade	31
1.15	Derivation of Elastic Rotor Blade Equation	36
2	Finite Element Analysis in Space	41
2.1	Introduction	41
2.2	Finite Element in Space	41
2.3	Strong Form of the Equation	41
2.4	Weak Form of the Equation	42
2.5	Galerkin's Method	43
2.6	Shape Function in 1 Dimension	43
2.7	Shape Function Formulation for Beam Element	44
2.8	Properties of Shape Function in 1D	46
2.9	Finite Element Formulation of Rotating Beam	48
2.10	Centrifugal Force	51

2.11	Shape Function Formulation for Two Elements	52
2.12	FEM Formulation of Rotating Beam with Only One Shape Function (for Free Vibration).	54
2.13	Calculation of Mode Shapes and Frequencies	57
2.14	FEM Formulation of Aerodynamic Force for Rotor Problem	57
3	Finite Element in Time	61
3.1	Introduction	61
3.2	Selection of Shape Function in Time	62
3.3	Finite Element in Time Example	64
3.4	Solution of Coupled Differential Equations with Finite Element in Time	68
3.5	Enforcing Periodicity in the System	70
3.6	Advantage of Choosing an Element from $(0 \text{ to } 2\pi)$, p -Version of Finite Element in Time	71
3.7	Selection of Number of Nodes	72
3.8	Effect of Forcing Term in Finite Element in Time	72
3.9	Finite Difference Method (Runge–Kutta Fourth Order)	77
4	Stability Analysis	83
4.1	Introduction	83
4.2	Stability Analysis of Equations with Constant Coefficients	83
4.3	Stability Analysis of a Coupled Differential Equations with Constant Coefficients	84
4.4	Stability Analysis of the Equation with Periodic Coefficients, Floquet Theory	87
4.5	Analytical Solution with the Floquet Theory	88
4.6	Numerical Method to Evaluate a Transition Matrix	89
4.7	Stability Analysis for Rotor Problem	90
5	Helicopter Rotor Results	93
5.1	Inputs	93
5.2	Result 1 (Mode Shapes and Frequencies of the Rotating Beam)	93
5.3	Result 2 (Response of the Rotor Blade with the Uniform Inflow Model, Using Three Different Cases).	95
5.4	Result 3 (Response of the Rotor Blade with the Linear Inflow Model, Using Three Different Cases).	95
5.5	Result 4 (Stability in Hover Condition)	96
5.6	Result 5 (Stability in Forward Flight).	97
5.7	Summary and Conclusions	97
	References	99

The Rotating Beam Problem in Helicopter Dynamics

Ganguli, R.; Panchore, V.

2018, XIII, 99 p. 46 illus., Hardcover

ISBN: 978-981-10-6097-7
