1	Introduction	1
1.1	Music and Science	1
1.2	Music and Emotion: Looking into Historical Perspective	3
1.3	Psychological Analysis of Emotion	4
1.4	Chaos Theory: Small Fluctuations Large Outcome	6
1.5	Fractals and Multifractals: A New Dialogue Between Human and Nature	7
1.6	How Music Affects Our Brain: From a Neuro-Physical Approach to Fractal Analysis Techniques	10
1.7	Study of Effects of Music on Brain: An Indian Perspective	13
	References	15
2	Non Linear Techniques for Studying Complex Systems	21
2.1	Introduction	21
2.2	Empirical Mode Decomposition (EMD)	23
2.3	Wavelet Transform	25
2.4	Detrended Fluctuation Analysis	29
2.5	Multifractal Detrended Fluctuation Analysis (DFA)	32
2.6	Multifractal Detrended Cross-Correlation Analysis (MFDXA)	36
2.7	Estimation of Neural Jitter and Shimmer	40
2.8	Estimation of Pitch of EEG Signal from Zero-Crossings	44
	References	46
3	Emotions from Hindustani Classical Music: An EEG based study including Neural Hysteresis	49
3.1	Introduction	49
3.1.1	Background	49
3.1.2	What Is Hysteresis?	50
3.1.3	Neural Plasticity and Hysteresis	50
3.1.4	Hindustani Classical Music and Emotions	51
3.1.5	EEG and Musical Emotions	52

3.1.6	Use of DFA to Assess Emotions and also Neural Hysteresis	53
3.1.7	Overview of Our Work	54
3.2	Experimental Details	55
3.2.1	Subjects Summary	55
3.2.2	Choice of <i>Ragas: Chayanat and Darbari Kanada/Bahar and Mian Ki Malhar</i>	55
3.2.3	Experimental Protocol	56
3.3	Methodology	57
3.3.1	Empirical Mode Decomposition (EMD)	57
3.3.2	Wavelet Transform	57
3.3.3	Detrended Fluctuation Analysis (DFA)	58
3.4	Results and Discussion	58
3.5	Conclusion	68
	References	69
4	Musical Perception and Visual Imagery: Do Musicians visualize while Performing?	73
4.1	Introduction	73
4.1.1	Creativity in Musical Performances: Brain Response	74
4.1.2	Improvisation in Hindustani Music	75
4.1.3	Musicians and Visual Imagery: Claims and Beliefs	76
4.1.4	Musical Imagination and the Role of Occipital Lobe	76
4.1.5	Use of MFDFA and MFDXA to Study Musical Imagination	77
4.2	Experimental Details	78
4.2.1	Subjects Summary	78
4.2.2	Choice of <i>Raga: Jayjayanti</i>	78
4.2.3	Experimental Protocol	79
4.3	Methodology	80
4.4	Results and Discussion	80
4.5	Conclusion	98
	References	100
5	Tanpura Drone and Brain Response	103
5.1	Introduction	103
5.1.1	What Is Tanpura Drone?	104
5.1.2	How Does a Tanpura Drone Affect Brain Rhythm?	105
5.1.3	Use of Tanpura Drone as a Baseline	105
5.1.4	Use of MFDFA to Assess the Effect of Drone	106
5.2	Experimental Details	107
5.2.1	Subjects Summary	107
5.2.2	Processing of Tanpura Drone	107
5.2.3	Experimental Protocol	107

5.3	Methodology	108
5.4	Results and Discussions	109
5.5	Conclusion	113
	References.	114
6	Genesis of Universality of Music: Effect of Cross Cultural Instrumental Clips.	117
6.1	Introduction	117
6.1.1	What Is Universality of Music?	117
6.1.2	Previous Research to Look for Universal Cues of Music.	118
6.1.3	Neuro-Cognition of Emotional Music Across Different Cultures	118
6.1.4	Use of MFDFA on EEG to Assess Universality and Domain Specificity of Musical Emotion	120
6.1.5	Overview of Our Work.	121
6.2	Experimental Details.	122
6.2.1	Collection of Human Response Data.	122
6.2.2	Processing of Music Signals	123
6.2.3	Subjects Summary.	123
6.2.4	Experimental Protocol.	124
6.2.5	Methodology.	125
6.3	Results and Discussions	126
6.4	Conclusion	138
	References.	140
7	Gestalt Phenomenon in Music: Which Frequencies Do We Really Hear?	145
7.1	Introduction	145
7.1.1	What Is Gestalt Psychology?	145
7.1.2	Applications of Gestalt in Visual Domain	146
7.1.3	Gestalt in Auditory Domain	146
7.1.4	Creativity and Gestalt Theory	147
7.1.5	Response of Brain to Certain Frequency Bands of Music Using Non-linear Techniques	147
7.1.6	Doctoring of Clips from Tagore Songs	149
7.1.7	Overview of Our Work.	149
7.2	Experimental Details.	150
7.2.1	Collection and Analysis of Human Response Data	150
7.2.2	Subjects Summary.	152
7.2.3	Experimental Protocol.	152
7.3	Methodology	153
7.4	Results and Discussions	154
7.5	Conclusion	158
	References.	160

8	Emotion and Ambiguity: A Study	165
8.1	Introduction	165
8.1.1	Emotions in Hindustani Music and the Importance of Ambiguity	165
8.1.2	Non Linear Source Modeling of Musical Instruments	166
8.1.3	Neural Response to Emotional Stimuli	167
8.1.4	Use of MFDFA to Assess Acoustical/Human Response	168
8.2	Experimental Details	169
8.2.1	Choice of Three Pairs of <i>Ragas</i>	169
8.2.2	Analysis of the Acoustic Signal Using MFDFA	170
8.2.3	Subjects Summary for EEG	170
8.2.4	Experimental Protocol	170
8.3	Methodology	172
8.4	Results and Discussions	172
8.5	Conclusion	180
	References	182
9	Improvisation—A New Approach of Characterization	185
9.1	Introduction	185
9.1.1	Complex Structure of Music Signals	185
9.1.2	Brief Introduction to <i>Raga</i> in Hindustani Classical Music	186
9.1.3	Improvisation: Hindustani Classical Versus Western Music	186
9.1.4	Earlier Studies to Capture Improvisation	188
9.1.5	Fractal Study on Music Signals	188
9.1.6	Essence of Multifractal Study on Music Signals	189
9.1.7	Multifractal Cross Correlation Study and Its Implications	190
9.2	Experimental Details	191
9.2.1	Choice of <i>Ragas</i>	191
9.3	Methodology	191
9.4	Results and Discussion	192
9.5	Conclusion	207
	References	209
10	Neural Jitter-Shimmer and Extraction of Pitch from EEG Signals	213
10.1	Introduction	213
10.1.1	Application of Jitter/Shimmer and Pitch in Speech and Music Analysis	214
10.1.2	Different EEG Frequency Bands and Their Importance	215

- 10.1.3 Evaluation of Neural Jitter/Shimmer and Extraction
of Fundamentals 216
- 10.1.4 Probability of Occurrence of Fundamentals?
Does a Preferred Fundamental Exist? 217
- 10.2 Experimental Details. 217
- 10.3 Methodology 218
- 10.4 Results and Discussion 218
- 10.5 Conclusion 226
- References. 227
- Epilogue. 231**

Musicality of Human Brain through Fractal Analytics

Ghosh, D.; Sengupta, R.; Sanyal, S.; Banerjee, A.

2018, XVII, 232 p. 119 illus., 111 illus. in color.,

Hardcover

ISBN: 978-981-10-6510-1
