

Contents

1	Introduction to Atomic Force Microscopy-Based Nanorobotics for Biomedical Applications	1
1.1	Background and Motivation	1
1.2	Cellular Physiological Properties Detection	4
1.3	Single-Cell and Single-Molecule Techniques	5
1.4	Nanorobot Based on AFM	10
1.5	Opportunities and Challenges	12
1.6	Thesis Contents and Chapter Organization	14
	References	16
2	Immobilization Methods for Observing Living Mammalian Suspended Cells by AFM	21
2.1	Current Status of Immobilizing Living Cell for AFM Imaging	21
2.2	Biological Experiment Platform Based on AFM Nanorobot	22
2.3	Immobilizing Mammalian Suspended Cells by Micropillar Array	24
2.4	Imaging Living Mammalian Suspended Cells Based on Micro-Pillar Immobilization	26
2.5	Imaging Living Mammalian Suspended Cells Based on Micro-Well Immobilization	27
2.6	Summary	29
	References	30
3	Measuring the Mechanical Properties of Single Cells by AFM	33
3.1	Current Status of Measuring Cell Mechanics by AFM	34
3.2	Principle and Methods of Measuring Cell Mechanics by AFM	35
3.3	Fabrication of AFM Spherical Tip	39

3.4	Measuring the Mechanics of Cancerous Cells with Different Invasive Abilities	40
3.5	Summary	45
	References	45
4	Single-Molecule Recognition and Force Measurements by AFM . . .	49
4.1	Current Status of AFM Single-Molecule Force Measurements . . .	50
4.2	Principle of AFM Single-Molecule Force Spectroscopy	51
4.3	Tip Functionalization and Verification	53
4.4	Measuring the CD20-Rituximab Interaction Forces	56
4.4.1	Purified CD20s on Mica	56
4.4.2	Native CD20s on Lymphoma Cell	59
4.5	Summary	61
	References	62
5	Mapping Membrane Proteins on Cell Surface by AFM	65
5.1	Current Status of Mapping Membrane Proteins on Cell Surface by AFM	65
5.2	Peak Force Tapping AFM	66
5.3	Mapping Protein Distributions by PFT	67
5.3.1	Avidins on Mica	68
5.3.2	CD20s on Lymphoma Cell Surface	71
5.4	Summary	75
	References	76
6	Applications of AFM Cellular and Molecular Biophysical Detection in Clinical Lymphoma Rituximab Treatment	79
6.1	Cellular Ultra-Microstructure and Mechanics Detection	79
6.1.1	PCD Mechanism	79
6.1.2	ADCC Mechanism	83
6.1.3	CDC Mechanism	91
6.2	Probing Target Proteins on Primary Cells from Clinical Lymphoma Patients	99
6.2.1	Detecting CD20-Rituximab Interactions on Patient Cancerous Cells	99
6.2.2	Detecting FcR-Rituximab Interactions on Patient Effector Cells	110
6.3	Comparison of AFM Detection Results and Clinical Therapeutic Outcomes	119
6.3.1	CD20-Rituximab Interaction on Patient Cancerous Cells and Clinical Efficacies	119
6.3.2	FcR-Rituximab Interaction Patient Effector Cells and Clinical Efficacies	120
6.4	Summary	125
	References	125

7 Conclusion and Future Work 129

 7.1 Conclusion 129

 7.2 Future Work 130
