

Data set E

Data set E contains data for 500 persons who responded **twice** to an instrument with 25 dichotomous items.

In the rack data file (rack.prn) items 1 to 25 contain the responses for each person at time point 1, and items 26 to 50 contain the responses for each person at time point 2. Template files are included (rack.itm and rack.spc).

In the stack data file (stack.prn) a person factor 'time' is included. A line in the data file with a person factor value of '1' contains the responses at time 1 and a line in the data file with a person factor value of '2' contains the responses at time 2. Template files are included (stack.itm and stack.spc).

Hint: The data were simulated to have a difference between time 1 and time 2 of 0.2 logits.
