

## Data set F

Data set F contains ratings of three raters (graders) rating 500 persons on 6 criteria (sorry not 5 as stated in Exercise 7). All the criteria have 5 categories. Each person is rated by two raters.

In the data file (ratings.prn) :

- Facet ID – columns 1 to 3
- Person ID – columns 4 to 6
- Rater - column 7
- Items – columns 13 to 18

Template files are provided (ratings.itm, ratings.spc) to analyze these data in a three-facet model in RUMM2030. When creating the project, on the *Data design* screen choose:

- Person design – Person ID, no person design
- Item design – Two factors each with multiple levels
