

Editors:

L. R. Young, J. P. Sutton

Encyclopedia of Bioastronautics

- Accessible encyclopedia on humans in space is interdisciplinary and provides both basic information and key concepts for researchers in this exciting and growing field
- Covers information on nutrition, exercise, health care, radiation exposure, and many more topics on how space affects the human body
- Relies upon and further develops the groundbreaking work of the National Space Biology Research Institute (NSBRI), which co-brands this work with Springer
