

**Table 18.9:** Results of the 2-way ANOVA on the effects of the factors ‘site’ and ‘substrate group’ on the average well colour development (n = 72; df: degrees of freedom, MS: mean squares).

	df Effect	MS Effect	F	p-level <sup>a</sup>
substrate group	5	3.41	2.63	*
site	3	24.60	19.01	*****
interaction	15	.05	.04	n.s.

<sup>a</sup> p-levels: n.s. > .05, \* < .05, \*\* < .01, \*\*\* < .001, \*\*\*\*\* < .0001
