

Carbon and Nitrogen Cycling in European Forest Ecosystems

E.-D. Schulze (ed.)

Ecological Studies, Springer Verlag, Heidelberg

Contents

Part A: Introduction to the European Transect

1. The carbon and nitrogen cycles of forest ecosystems

E.-D.Schulze

1.1 Introduction

1.2 The Carbon and Nitrogen Cycles

1.3 The NIPHYS/CANIF Project

1.4 Experimental Design

1.5 Conclusions

Acknowledgements

References

2. Experimental sites in the NIPHYS/CANIF project

T. Persson, H. van Oene, T. Harrison, P. Karlsson, G. Bauer, J. Cerny,

M.-M. Coûteaux, E. Dambrine, P. Högberg, A. Kjøller, G. Matteucci,

A. Rudebeck, E.-D.Schulze and T. Paces

2.1 Site description

2.2 Soil characteristics

2.3 Ecosystem C and N pools

2.4 Data bank

2.5 Conclusions

References

Part B: Plant Related Processes

3. Tree biomass, growth and nutrient pools

G. Scarascia-Mugnozza, G. Bauer, H.Persson, G.Matteucci, A. Masci

3.1 Introduction

3.2 Approaches to measuring biomass and growth

3.3 Biomass

3.4 Forest productivity
3.5 Carbon and nutrient pools
3.6 Conclusions
References

4. Linking Plant Nutrition and Ecosystem Processes

G. Bauer, H. Persson, T. Persson, M. Mund, M. Hein, E. Kummetz,
G. Matteucci, H. Van Oene, G. Scarascia-Mugnozza, E.-D. Schulze

4.1 Introduction
4.2 Experimental approach
4.3 Nutrient concentrations
4.4 Nutrient contents
4.5 Nutrient partitioning in different tree compartments
4.6 Ecosystem C and N pools
4.7 Conclusions
References

5. Root growth and response to nitrogen

Ch. Stober, E. George, H. Persson

5.1 Introduction
5.2 Approaches to the study of root growth
5.3 Root growth measurements obtained by soil coring
5.4 Root growth measurements obtained by root windows
5.5 Root growth measurements obtained by in-growth cores
5.6 Root growth at different European forest sites
5.7 Conclusions
References

6. Nitrogen uptake processes in roots and mycorrhizas

T. Wallenda, C. Stober, L. Högbom, H. Schinkel, E. George, P. Högberg,
D. Read

6.1 Introduction
6.2 Approaches to study different aspects of the N uptake process
6.3 Studies with excised roots and mycorrhizas
6.4 Field based experiments
6.5 Conclusions
References

7. The fate of ^{15}N - labelled nitrogen inputs to coniferous and broadleaved forests

G. Gebauer, B. Zeller, G. Schmidt, C. May, N. Buchmann,
M. Colin-Belgrand, E. Dambrine, F. Martin, E.-D. Schulze, P. Bottner

7.1 Introduction
7.2 Sites of investigation

- 7.3 Approaches to study the fate of ¹⁵N-labelled nitrogen inputs
- 7.4 N release and tree uptake from ¹⁵N-labelled decomposing litter in a beech forest in Aubure
- 7.5 Ecosystem partitioning of ¹⁵N-labelled ammonium and nitrate on the sites in the Fichtelgebirge and in the Steigerwald
- 7.6 Conclusions
- References

8. Canopy uptake and utilization of atmospheric pollutant nitrogen

A.F. Harrison, E.-D.Schulze, G. Gebauer, G. Bruckner

- 8.1 Introduction
- 8.2 Atmospheric nitrogen pollutants
- 8.3 Pathways for canopy uptake of nitrogen
- 8.4 Approaches to the determination the canopy uptake of nitrogen
- 8.5 Review of research
- 8.6 Role in the critical load
- 8.7 Ecophysiological consequences of canopy uptake
- 8.8 Way forward
- 8.9 Policy implications
- 8.10 Conclusions
- References

9. Biotic and abiotic controls over ecosystem cycling of stable natural nitrogen, carbon and sulphur isotopes

G.A. Bauer, G. Gebauer, A.F. Harrison, P. Hoegberg, L. Hoegbom, H. Schinkel, A.F.S. Taylor, M. Novak, F. Buzek, D. Harkness, T. Persson, E.-D. Schulze

- 9.1 Introduction
- 9.2 Approaches to the study of stable isotopes in the field
- 9.3 $\delta^{15}\text{N}$ of ammonium and nitrate in wet deposition
- 9.4 Stable isotope signatures in different ecosystem compartments
- 9.5 $\delta^{15}\text{N}$ signatures as indicators of N saturation in forest ecosystems
- 9.6 Conclusions
- References

Part C: Heterotrophic Processes

10. Soil respiration in beech and spruce forests in Europe: Trends, controlling factors, annual budgets and implications for the ecosystem balance

G. Matteucci, S. Dore, S. Stivanello, C. Rebmann, N. Buchmann

- 10.1 Introduction

10.2 Approaches to measure soil respiration
10.3 Daily and seasonal trends of soil respiration and climatic variables
10.4 Factors controlling soil respiration
10.5 Comparison of chamber measurements with eddy covariance
 measurements below the canopy
10.6 Annual budgets of soil respiration
10.7 Conclusions
References

11. Annual carbon and nitrogen fluxes in soils along the European forest transect determined using ^{14}C -bomb

A.F. Harrison, D.D. Harkness, A.P. Rowland, J.S. Garnett, P.J. Bacon

11.1 Introduction
11.2 Forests, sampling procedure and analysis
11.3 Model description
11.4 Estimations of C and N pools and fluxes
11.5 Pools and distribution of C and N in soil profiles
11.6 Variations in the carbon age and mean residence times (MRTs)
11.7 Annual carbon and nitrogen fluxes
11.8 General discussion
11.9 Conclusions
References

12. Carbon Mineralisation in European Forest Soils

T. Persson, P. Karlsson, U. Seyferth, M. Sjöberg, A. Rudebeck

12.1 Introduction
12.2 Experimental background
12.3 C mineralisation in the north-south transect
12.4 Long-term fertilization experiments
12.6 Mean residence time
12.7 Comparison of intact and sieved soil cores
12.8 Conclusions
References

13. Litter Decomposition

M.F. Cotrufo, M. Miller, B. Zeller

13.1 Introduction
13.2 Factors affecting the decomposition process
13.3 Enzymatic activity
13.4 Nitrogen dynamics in decomposing litter
13.5 Decomposition studies in Europe: from DECO, VAMOS, MICS to CANIF
13.6 Decomposition studies within a latitudinal transect of European beech forests
13.3 Conclusions
References

14. Soil nitrogen turnover – mineralisation, nitrification and denitrification in European forest soils

T. Persson, A. Rudebeck, J.H. Jussy, M. Colin-Bertrand, A. Prieme, E. Dambrine, P. Karlsson, M. Sjöberg

- 14.1 Background and aim of the study
- 14.2 Methods used to study N turnover
- 14.3 Net N mineralisation based on laboratory studies
- 14.4 Net nitrification based on laboratory studies
- 14.5 Manipulations of pH, N availability and nitrifier density in the laboratory
- 14.6 Autotrophic versus heterotrophic nitrification
- 14.7 Net N mineralization and nitrification in N fertilisation experiments
- 14.8 Comparison of N turnover in similar soils at different climate
- 14.9 Comparison of N turnover in sieved and intact soil cores
- 14.10 In situ mineralisation studies at Aubure
- 14.11 Comparison of in situ and laboratory-based mineralisation studies
- 14.12 Denitrification
- 14.13 Concluding discussion
- 14.14 Conclusions
- References

15. Nitrogen and carbon interactions of forest soil water

B.R. Andersen and P Gundersen

- 15.1 Introduction
- 15.2 Approaches to study the forest soil waters
- 15.3 Soil water concentration of nitrogen and carbon
- 15.4 Correlation between dissolved organic nitrogen and carbon
- 15.5 Conclusions
- References

Part D: Diversity Related Processes

16. Fungal diversity in ectomycorrhizal communities of Norway spruce (*Picea abies* (L.) Karst.) and beech (*Fagus sylvatica* L.) along a north-south transect in Europe

A.F.S.Taylor, F. Martin, D.J. Read

- 16.1 Introduction
- 16.2 Analysis of ectomycorrhizal community structure and diversity
- 16.3 ECM communities of spruce forests
- 16.4 ECM communities of beech forests
- 16.5 Genetic diversity within a population of *Laccarina amethystina*
- 16.6 Isolation and growth of fungal isolates on an organic N source
- 16.7 Comparative evaluation of ectomycorrhizal diversity
- 16.8 Conclusions
- References

17. Diversity and role of the decomposer food web

V. Wolters, A. Pflug, A.R. Taylor, D. Schroeter

17.1 Introduction

17.2 Approaches to investigate decomposer communities

17.3 The microflora

17.4 The soil fauna

17.5 Contribution of the decomposer food web to C and N flows

17.6 Conclusions

References

18. Diversity and role of microorganisms

A. Kjøller, M. Miller, S. Struwe, V. Wolters, A. Pflug

18.1 Introduction and background

18.2 Experimental background

18.3 Community of microfungi in beech forest

18.4 Functional diversity of bacteria in the litter of coniferous forests

18.5 Conclusions

References

Part E: Integration

19. Spatial variability and long-term trends in mass balance of nitrogen and sulphur in central European forested catchments

E. Dambrine, A. Probst, D. Viville, P. Biron, T. Paces, M. Novak, F. Buzek, J. Cerny, H. Groscheova

19.1 Introduction

19.2 Approaches to study long term changes in watersheds

19.3 Temporal variations and trends

19.4 Budgets

19.5 Biological cycling of sulfur

19.6 Conclusion

References

20. Model analysis of carbon and nitrogen cycling in Picea and Fagus forests

H. van Oene, F. Berendse, T. Persson, T. Harrison, E.-D. Schulze, B.R. Andersen, G.A. Bauer, E. Dambrine, P. Höglberg, G. Matteucci, T. Paces

20.1 Introduction

20.2 Model description

20.3 Input data and parameter values

20.4 Model calibration and comparison with measured data

20.5 Model analysis

20.6 Conclusions

References

**21. Interactions between the carbon- and nitrogen cycle
and the role of biodiversity: A synopsis of a study along a
north-south transect through Europe**

E.-D.Schulze, P. Högberg, H. van Oene, T. Persson, A.F. Harrison,
D. Read, A. Kjøller, G. Matteucci

21.1 Introduction

21.2 Change of ecosystem processes along the European transect

21.3 What limits the C- and N-fluxes in these forest ecosystems?

21.4 What are Net Ecosystem Productivity (NEP) and Net Biome

Productivity (NBP), and how do they relate to ecosystem parameters?

21.5 Are there thresholds and non-linearities?

21.6 What role does biodiversity play in ecosystem processes?

21.7 Conclusions

References
