

Table 2.2 Mean monthly and annual air temperature and precipitation for the NIPHYS/CANIF sites during the period 1993-97. For some sites, data were not available for all years. Data for Collelongo are based on 1996-98. Annual data might not correspond completely with the given monthly data due to incompleteness of the climatic datasets. Only complete years are used for calculating annual means whereas monthly data are based on availability of monthly data.

Mean air temperature [°C]

^a The sites Nac and Jez have the same meteorological station as well as AuP and AuF. Sch had too few data to be separately treated and is joined with Wal (located 10 km away).
