

Using Tamino Version 3 Together with Previous Tamino Versions

Tamino Version 3.1 can co-exist with previous versions on the same computer. After you have installed Tamino Version 3, you can use the *Tamino Manager* '**Set Version**' button to perform an upgrade to Tamino Version 3. Performing an upgrade does not affect the storage and organization of data as is the case when a migration is performed (see **Data and Schema Migration** for more detail).
