VOLUME 4
Radiological Protection

	Title Page, Preface, Authors, Table of Contents	
	Title Page	
	Preface	
	Contributors	
	Table of Contents	
1	The development of the organizational and the conceptual basis of radiological protection (A. Kaul, D. Becker)	1
2	Biological effects of ionising radiation (J.W. Stather, H. Smith)	5
2.1	Introduction	5
2.2	Cellular effects	6
2.2.1	Primary events following exposure to ionising radiation	6
2.2.2	Cellular damage and repair following the primary radiation events	7
2.2.3	Classification of radiation-induced damage	9
2.2.4	Implications of cellular damage for whole or partial body exposure	13
2.3	Deterministic effects	13
2.3.1	Tissue and organ development	13
2.3.2	Dose-response relationships for radiation damage	14
2.3.3	Deterministic effects in humans following acute whole-body irradiation	15
2.3.4	Deterministic effects following partial body irradiation	16
2.4	Radiation-induced cancer	19
2.4.1	Cancer development	19
2.4.2	Dose-response relationships	20
2.4.3	Exposures to external radiation	22
2.4.4	Exposure to internally incorporated radionuclides	22
2.4.5	Dose and dose rate effectiveness factors (DDREFs)	27
2.4.6	Risk coefficients for protection	27
2.4.7	Low dose studies	29
2.5	Hereditary disease	31
2.5.1	Categories of genetic damage	31
2.5.2	Risk coefficients for hereditary disease	32
2.6	Irradiation in utero	33
2.6.1	Deterministic effects	34
2.6.2	Brain function	34
2.6.3	Risk coefficients for cancer	35
2.6.4	Hereditary disease	35
2.7	Summary of risk factors for cancer and hereditary disease	36
2.8	Conclusions	36
2.9	References	38
3	Physical fundamentals (H. Klewe-Nebesius, H.J. Gils)	41
3.1	Natural radioactivity	41
3.2	Elements, isotopes and radionuclides	42
3.2.1	Atoms, electrons and the Periodic Table of Elements	42

3.2.2	Atomic nuclei, nuclides and the Chart of Nuclides	43
3.3	The structure of the atomic nucleus	44
3.3.1	Elementary particles	44
3.3.2	Nuclear transformations	46
3.4	Radioactive decay	50
3.4.1	Basic properties	50
3.4.2	Decay modes	55
3.4.3	The natural radioactive decay families	58
3.5	Radioactive radiation	64
3.5.1	Types of radiation	64
3.5.2	Physical properties of radiation	66
3.6	Nuclear fission and fission products	70
3.6.1	Particle induced nuclear fission	70
3.6.2	Fission products	70
3.6.3	Nuclear reactors	72
3.6.4	Nuclear explosives	72
3.6.5	Radioactive inventory and nuclear waste	73
3.6.6	Release of radionuclides from the radioactive inventory of a nuclear reactor	78
3.7	References	79
4	Radiological quantities and units (G. Dietze)	81
4.1	Introduction	81
4.2	Radiation field quantities	82
4.2.1	Scalar radiation field quantities	82
4.2.2	Vectorial radiation field quantities	84
4.3	Interaction coefficients and quantities	85
4.3.1	Cross section	85
4.3.2	Mass attenuation coefficient and mass energy transfer coefficient	85
4.3.3	Mass stopping power and linear energy transfer (LET)	86
4.3.4	Mean energy expended in a gas per ion pair formed	87
4.4	Quantities related to energy transfer	87
4.4.1	Stochastic quantities	87
4.4.2	Non-stochastic quantities	88
4.5	Dose quantities in radiation protection	90
4.5.1	Concept of radiation protection quantities	90
4.5.2	Protection quantities	91
4.5.3	Operational quantities	94
4.6	Radioactivity quantities	98
4.6.1	Activity, specific activity, activity concentration, activity per area	99
4.6.2	Specific quantities for radon, thoron and their progeny	99
4.7	Quantities for internal dosimetry	102
4.8	Limits, constraints, action levels	103
4.9	References	107
5	Shielding against ionizing radiation (Y. Harima, K. Hayashi, H.-G. Vogt)	109
5.1	Introduction	109
5.2	Stopping power and range	109
5.3	Penetration depths of charged particles	110
5.3.1	Heavy charged particles	110

5.3.2	Electrons and positrons	112
5.4	Photons	113
5.4.1	Basic shielding concept	113
5.4.2	Attenuation data of radioactive sources in shielding materials	114
5.4.3	An example of the calculation of an ambient dose equivalent rate	118
5.5	Neutrons	124
5.5.1	Basic shielding concepts	124
5.5.2	Attenuation data of various neutron sources in shield material	124
5.5.3	Sample shield calculation	126
5.5.4	Induced activity	127
5.6	Computer codes and online nuclear data services	136
5.7	References	140
5.8	Appendix	142
6	External dosimetry (H. Paretzke, N. Petoussi-Henss)	183
6.1	Protection and operational quantities	183
6.1.1	Protection quantities	183
6.1.2	Operational Quantities	183
6.2	Dosimetric models	184
6.2.1	Models and phantoms of the human body	184
6.2.2	Idealized geometries representing occupational exposures	186
6.2.3	Environmental source geometries	186
6.2.4	Methods of calculating protection quantities in computational models	187
6.3	Conversion coefficients for photons	188
6.3.1	Occupational	188
6.3.2	Conversion coefficients for environmental gamma ray fields	195
6.4	Conversion coefficients for neutrons	202
6.5	Conversion coefficients for electrons	203
6.5.1	Occupational exposure	203
6.5.2	Environmental exposure	205
6.6	Doses from external exposure of radionuclides in the environment	205
6.7	References	224
7	Internal dosimetry of radionuclides (K.F. Eckerman, N. Ishigure, A. Phipps, J.W. Stather)	227
7.1	Introduction	227
7.2	Biokinetics of radionuclides in the body	228
7.2.1	Inhalation	229
7.2.2	Ingestion	236
7.2.3	Cuts and wounds	240
7.2.4	Absorption through intact skin	241
7.2.5	Systemic behaviour of radionuclides	241
7.2.6	Excretion	247
7.2.7	Embryo and foetus	247
7.2.8	Transfer in maternal milk	250
7.3	Dosimetric models	251
7.3.1	Introduction	251
7.3.2	Absorbed fraction and specific absorbed fraction	252
7.3.3	Computational models of the human anatomy	254
7.3.4	Dose rate per unit activity, S-factor	257
7.3.5	Specific absorbed fractions for various radiations	258
7.3.6	Calculation of doses to soft tissues and the skeleton	262

7.4	Dose coefficients	263
7.4.1	Method of calculation	264
7.4.2	Sources of dose coefficients	267
7.4.3	Dose coefficients for selected radionuclides	269
7.5	Internal monitoring	272
7.5.1	Methods of individual monitoring	273
7.6	Monitoring Programme	277
7.6.1	Need for a monitoring programme	277
7.6.2	Routine monitoring	277
7.6.3	Special or task-related monitoring	278
7.6.4	Confirmatory monitoring	278
7.6.5	Wound monitoring	278
7.7	Dose Assessment	279
7.7.1	Estimation of intake and dose	279
7.7.2	Control of worker doses	280
7.8	Monitoring data for radionuclides (H-3, Co-60, Sr-90, Ru-106, I-131, Cs-134, Cs-137, Ce-144, U-234, Pu-239, Am-241)	281
7.9	References	294
8	Decontamination (A. Kaul, M. Lasch)	299
8.1	Decontamination of materials	299
8.1.1	General approaches to decontamination	300
8.1.1.1	Contamination	300
8.1.1.2	Characteristics of oxide layer in BWRs and PWRs	300
8.1.1.3	Other types of contamination	301
8.1.1.4	Decontamination	302
8.1.1.5	The use of decontamination in decommissioning	302
8.1.1.6	Identification of decontaminable components	303
8.1.1.7	Effectiveness of decontamination, decontamination factor	304
8.1.1.8	Decontamination techniques (processes)	305
8.1.1.9	Decontamination and secondary waste generation	306
8.1.2	Decontamination techniques for large volume closed systems	306
8.1.2.1	Reactor decontamination in BWRs and PWRs	306
8.1.2.2	Fuel assemblies and decontamination	310
8.1.2.3	Decontamination of sodium cooled systems	310
8.1.2.3	Gas cooled reactors (WAGR)	311
8.1.3	Decontamination techniques for segmented parts	311
8.1.3.1	Chemical decontamination	312
8.1.3.2	Electrochemical decontamination	313
8.1.3.3	Jetting decontamination techniques	316
8.1.3.4	Ultrasonic decontamination	317
8.1.3.5	Decontamination by foams	319
8.1.3.6	Decontamination by gels	319
8.1.3.7	Decontamination by pastes	319
8.1.3.8	Mechanical decontamination techniques	319
8.1.3.9	Decontamination by strippable coatings	320
8.1.3.10	Melting	320
8.1.4	Decontamination techniques for building surfaces	320
8.2	Decontamination of skin	322

8.2.1	Introduction	322
8.2.2	Transport of radioactive substances via the skin	322
8.2.2.1	Anatomy of the skin	322
8.2.2.2	Transport procedure	323
8.2.3	Skin dose at contamination	323
8.2.3.1	Calculation of the equivalent dose to the skin	323
8.2.3.2	Equivalent dose rate conversion coefficients	324
8.2.4	Decontamination measures	328
8.2.4.1	Organisational and preliminary measures	328
8.2.4.2	First aid measures of skin decontamination	328
8.2.4.3	Specific decontamination procedures	329
8.2.4.4	Decontamination of specific body regions and organs	330
8.2.5	Procedure at residual contamination and fixing a reference value	330
8.2.5.1	Frequency of decontamination steps	330
8.2.5.2	Derivation of the reference value for residual contamination	330
8.3	References	332
9	Decorporation of radionuclides (G.N. Strandling, D.M. Taylor)	335
9.1	Introduction	336
9.2	General considerations	336
9.2.1	Factors affecting the efficacy of treatment	336
9.2.2	Factors influencing treatment decisions	337
9.2.3	Decision levels	337
9.2.4	Perception of risk and its implications	338
9.2.5	Approaches to treatment	339
9.3	Methods of treatment	340
9.3.1	Non-specific procedures	340
9.3.2	Procedures to enhance systemic radionuclide excretion	341
9.4	General comments on the efficiency of chelating agents for the actinides	342
9.4.1	What are the factors that govern the efficacy of chelating agents ?	343
9.4.2	Can the efficacy of treatment be predicted from animal studies ?	343
9.4.3	Are chelating agents always most effective when the radionuclides are present in circulating blood ?	343
9.4.4	Is DTPA effective for all actinides ?	344
9.4.5	Will the administration of chelating agents result in enhanced tissue deposition ?	344
9.4.6	Is the administration of sodium carbonate effective for uranium ?	344
9.4.7	Must chelating agents be administered promptly to be effective ?	344
9.4.8	Is intravenous injection the best mode of administration ?	345
9.4.9	How can judgements on efficacy be made ?	345
9.4.10	When should treatment start ?	345
9.4.11	When should treatment stop ?	345
9.4.12	For which materials are chelating agents likely to be effective ?	345
9.4.13	For which materials are chelating agents unlikely to be effective ?	346
9.4.14	Is lung lavage more effective than chelation treatment for inhaled materials ?	346
9.5	Recent developments	347
9.5.1	Plutonium and americium	347
9.5.2	Thorium	347
9.5.3	Uranium	347
9.6	Optimum treatment protocols	348

9.6.1	Tritium	348
9.6.2	The alkaline earth elements, strontium, barium and radium	348
9.6.3	Iodine	350
9.6.4	Caesium	350
9.6.5	Plutonium and americium	352
9.6.6	Thorium	360
9.6.7	Uranium	361
9.7	Future research needs	363
9.8	References	365
10	Measuring techniques	369
10.1	Detectors for radiation protection (G. Brix, W. Weiss)	369
10.1.1	Overview and general characteristics of radiation detectors	369
10.1.2	Gas-filled ionization detectors	371
10.1.2.1	Ionization and gas amplification	371
10.1.2.2	Ionization chambers	372
10.1.2.3	Proportional counters	376
10.1.2.4	Geiger-Müller counters	378
10.1.3	Scintillation detectors	379
10.1.4	Semiconductor detectors	382
10.1.5	Thermoluminescence and radiophotoluminescence detectors	386
10.1.6	Photographic films	388
10.1.7	Detectors for neutrons	389
10.1.8	Biological dosimetry	391
10.1.9	References for 10.1	393
10.2	Radiological protection measurements: external exposure (G. Dietze)	395
10.2.1	Operational quantities	397
10.2.2	Reference levels	397
10.2.3	Types of exposure	397
10.2.3.1	Occupational exposure	398
10.2.3.2	Public exposure	398
10.2.4	Types of monitoring programs	399
10.2.4.1	Individual monitoring for external exposure	399
10.2.4.2	Area monitoring for external exposure	399
10.2.4.3	Calibration	400
10.2.5	Requirements for individual monitoring of external exposure	401
10.2.5.1	Operational requirements	402
10.2.5.2	Accuracy requirement	403
10.2.6	Personal dosimeters for individual monitoring in different radiation fields	404
10.2.6.1	Photon dosimetry	404
10.2.6.2	Beta dosimetry	405
10.2.6.3	Neutron dosimetry	405
10.2.6.4	Dosimetry in mixed field situations (photons and neutrons)	406
10.2.7	References for 10.2	407
10.3	Radiological protection measurements: internal exposure	409
10.3.1	Measurement of radon and its progeny (G. Dietze)	409
10.3.1.1	Measurement of radon in air	412
10.3.1.2	Measurement of radon progeny in air	415

10.3.1.3	Measurement of radon in the ground and in water	418
10.3.1.4	References for 10.3.1	419
10.3.2	In vivo measurements (H.-R. Doerfel)	420
10.3.2.1	Introduction	420
10.3.2.2	Requirements	421
10.3.2.3	Principles of γ spectrometry	424
10.3.2.4	Equipment	426
10.3.2.5	Spectrum evaluation	434
10.3.2.6	Measuring geometries	435
10.3.2.7	Calibration	439
10.3.2.8	Uncertainties and detection limits	445
10.3.2.9	Measurement procedure	447
10.3.2.10	Quality assurance and control	447
10.3.2.11	References for 10.3.2	449
10.3.3	In vitro measurements: excretion analyses (A. Dalheimer)	451
10.3.3.1	Introduction	451
10.3.3.2	Urine samples	451
10.3.3.3	Faeces samples	452
10.3.3.4	Exhalation	452
10.3.3.5	Other biological samples	453
10.3.3.6	Radiochemical analyses	453
10.3.3.7	Measuring techniques	456
10.3.3.8	Quality assurance	459
10.3.3.9	Examples for dose estimations from in vitro measurements	461
10.3.3.10	References for 10.3.3	465
11	Exposures from natural radiation sources (A. Kaul)	467
11.1	Introduction	467
11.2	Exposures by cosmic radiation and cosmogenic radionuclides	468
11.2.1	Origin and kinds of cosmic radiation	468
11.2.2	Exposures by cosmic radiations	468
11.3	Terrestrial radiation	470
11.3.1	External exposures	471
11.3.2	Internal exposures	472
11.4	Enhanced exposures from industrial activities	475
11.5	Worldwide average exposure from natural and man-made sources	476
11.6	References	478
