Warranty and Licence Notes for the Files on CD

The CD files of “Wideband Amplifiers” have been thoroughly checked and are believed to be substantially free of errors.

If, however, the reader discovers any inaccuracy or error, either in the text, the graphics, or the maths, please, report it to the e-mail address below:

✉ erik.margan@ijs.si

In case that your computer would not display or print correctly the PDF files please first read the file [settings.pdf](#) — it contains the recommended settings of the Adobe Acrobat Reader program and printer settings; by following the instructions there check those settings on your system and try to make the changes accordingly. If the error persists, please report it to the same address above.

When reporting a functional error, please include the information on your computer hardware: the type of processor, motherboard, CD/DVD-drive, graphics card, video monitor and printer; also, please, include the information on your software: operating system type and version, the CD/DVD drivers and settings (if any), the version of the Adobe Acrobat Reader program, the operating system fonts, and the Adobe fonts installed. This may allow us to trace the problem more accurately and, possibly, offer a solution (in the past the authors have experienced problems with displaying and printing, especially with some of the math symbols and structures; all those problems have been corrected either by rewriting the text or math, by redrawing the figures, by redefining the fonts, by changing the operating system settings, or by using a new Acrobat Reader version; however, some combinations of hardware and software may still be incompatible).

The hyperlinks to the Internet, the WWW, and e-mail addresses should work correctly with the Microsoft Internet Explorer and Outlook programs of any version and operating system type, from Windows 95 up to Windows XP. If the reader has installed a different browser or e-mail program, those, too, should work if they have been set to be the default application for their particular service. Be sure, however, not to disable the Acrobat Reader in ‘helper’ applications of the browser (as can be done in Netscape, for example), because this will prevent the system from activating the hyperlinks.

For Matlab ‘*.M’ files please read the [Matlab.txt](#) file in the X:\Matlab folder (where ‘X’ is the letter assigned to your CD/DVD drive).

The routines developed in Part 6 and 7, included in the M-files, have been checked for calculation accuracy and software compatibility with Matlab version 5.3 ‘for Students’ (The MathWorks, Inc., <http://www.mathworks.com>) running under Microsoft Windows operating system (versions -95, -98 and -XP). Except for the ‘BUTTAP.M’ routine, which bears the MathWorks copyright, all other routines were written by Erik Margan, who decided to offer them free of copyright — the reader is allowed to use them both for his own calculations or for embedding them in other software or hardware products, as long as this is not in conflict with the MathWorks copyright ownership. However, neither the authors nor the publisher of the book will assume any responsibility resulting from their use.

For the MicroCAP '*.CIR' circuit simulation files please read the [MicroCAP.txt](#) file in the X:\MicroCAP folder (where 'X' is the letter assigned to your CD/DVD drive). The files contain the most important parameters of the components used, but to run them you will also need the standard component library. For newer versions of MicroCAP (v.6 and up) you will probably need to convert the files to make them compatible with the program. Some of the circuits or library models or their parameters might need to be changed manually to run properly in newer program versions.

If the reader experiences any inability to read the original CD and if the error is caused by the CD itself, the publisher will replace the defective CD at no extra cost, other than shipment and packing.

Damages resulting from the use or abuse of the CD by the reader are not covered by this warranty.

In order to reduce the risk of losing the access to the information on the CD, the original purchaser of the book is allowed to make as many copies as needed, either on electronic or printed media, as long as these copies are used by the original purchaser for his own backup only. If the book is resold, the original purchaser loses all the above licence rights in favor to the new book owner.

For all other information contents in this book, all the standard copyright protections apply.
