M6FRINTN2S

Fresnel's formulas as function of angle of incidence for n1>n2

for Rp = rp^2, Rs = rs^2, and Tp = 1- Rp, Ts = 1-Rs

1. Amplitude reflection coefficients.

$$rp(\theta) := \frac{\left(\frac{n2}{n1}\right)\cdot\cos\left(2\cdot\frac{\pi}{360}\cdot\theta\right) - \sqrt{1-\left[\left(\frac{n1}{n2}\right)\cdot\sin\left(2\cdot\frac{\pi}{360}\cdot\theta\right)\right]^2}}{\frac{n2}{n1}\cdot\cos\left(2\cdot\frac{\pi}{360}\cdot\theta\right) + \sqrt{1-\left[\left(\frac{n1}{n2}\right)\cdot\sin\left(2\cdot\frac{\pi}{360}\cdot\theta\right)\right]^2}}$$

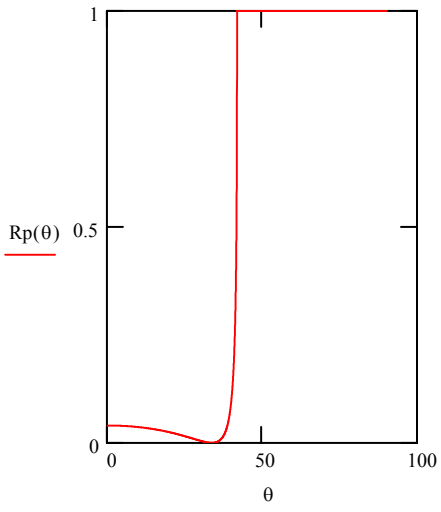
$$rs(\theta) := \frac{\cos\left(2\cdot\frac{\pi}{360}\cdot\theta\right) - \left(\frac{n2}{n1}\right)\cdot\sqrt{1-\left[\left(\frac{n1}{n2}\right)\cdot\sin\left(2\cdot\frac{\pi}{360}\cdot\theta\right)\right]^2}}{\cos\left(2\cdot\frac{\pi}{360}\cdot\theta\right) + \left(\frac{n2}{n1}\right)\cdot\sqrt{1-\left[\left(\frac{n1}{n2}\right)\cdot\sin\left(2\cdot\frac{\pi}{360}\cdot\theta\right)\right]^2}}$$

$n1 \equiv 1.5 \quad n2 \equiv 1 \quad \theta \equiv 0, .01 .. 90$

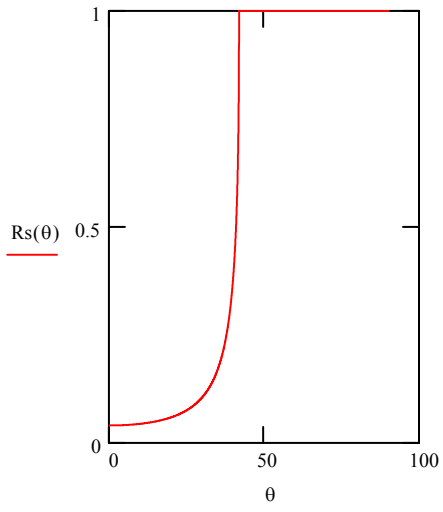
2. Reflection: Intensities

$$Rp(\theta) := rp(\theta)\cdot\overline{rp(\theta)} \qquad Rs(\theta) := rs(\theta)\cdot\overline{rs(\theta)}$$

p - case



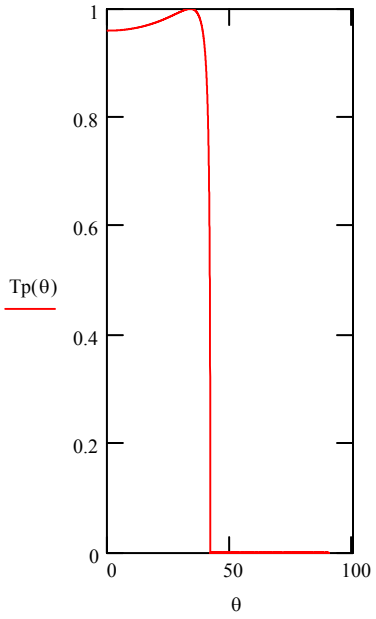
s - case



3. Transmission: Intensities

p - case

$$Tp(\theta) := 1 - Rp(\theta)$$



s - case

$$Ts(\theta) := 1 - Rs(\theta)$$
