### Fresnel's formulas as function of angle of incidence for $n_1 < n_2$

for  $R_p = r_p^2$ ,  $R_s = r_s^2$ , and  $T_p = 1 - R_p$ ,  $T_s = 1 - R_s$

#### 1. Amplitude reflection coefficients.

$$r_p(\theta) := \frac{\left(\frac{n_2}{n_1}\right) \cdot \cos\left(2 \cdot \frac{\pi}{360} \cdot \theta\right) - \sqrt{1 - \left[\left(\frac{n_1}{n_2}\right) \cdot \sin\left(2 \cdot \frac{\pi}{360} \cdot \theta\right)\right]^2}}{\frac{n_2}{n_1} \cdot \cos\left(2 \cdot \frac{\pi}{360} \cdot \theta\right) + \sqrt{1 - \left[\left(\frac{n_1}{n_2}\right) \cdot \sin\left(2 \cdot \frac{\pi}{360} \cdot \theta\right)\right]^2}}$$

$$r_s(\theta) := \frac{\cos\left(2 \cdot \frac{\pi}{360} \cdot \theta\right) - \left(\frac{n_2}{n_1}\right) \cdot \sqrt{1 - \left[\left(\frac{n_1}{n_2}\right) \cdot \sin\left(2 \cdot \frac{\pi}{360} \cdot \theta\right)\right]^2}}{\cos\left(2 \cdot \frac{\pi}{360} \cdot \theta\right) + \left(\frac{n_2}{n_1}\right) \cdot \sqrt{1 - \left[\left(\frac{n_1}{n_2}\right) \cdot \sin\left(2 \cdot \frac{\pi}{360} \cdot \theta\right)\right]^2}}$$

$$n_1 \equiv 1 \quad n_2 \equiv 1.5 \quad \theta \equiv 0, 4 \dots 90$$

#### 2. Reflection: Intensities

$$R_p(\theta) := r_p(\theta)^2$$

$$R_s(\theta) := r_s(\theta)^2$$

**p - case**

**s - case**

### 3. Transmission: Intensities

#### p - case

$$T_p(\theta) := 1 - R_p(\theta)$$

#### s - case

$$T_s(\theta) := 1 - R_s(\theta)$$
