Positive lens

Focal length f is positive, light from left propagating from medium with index 1 to lens of refractive index n

x_o on left of lens (negative)

Calculation for 4 positions for real and virtual objects, to the left and right of the object focus and image focus.

Calculation of x_i from given x_o and focal length

Calculation of magnification

$$f \equiv 10 \quad n1 := 1 \quad n2 := 1.5$$

Image focus: f

Object focus: $-f$
