

789 MW	C₇H₆O₂	Tropolone 2-Hydroxy-2,4,6-cycloheptatrien-1-one (effective symmetry class)	C_{2v}
-----------	--	--	-----------------------

Due to the proton tunneling motion, the ground state is split into a doublet; the splitting was determined to be 29193.788 MHz and the tunneling-rotation interaction constant to be 16.456 MHz.
